Yes, we'll look to get a handle on the schedule of items we should look at.  
Thanks for the inputs!

I think this Crystal River 3 Containment Delamination Issue is evolving fast and lots of stakeholders and experts involved, but wondering anyone from licensee side keeping a project action items and timelines, e.g.,

expected completion date	conclusions	responsibility	start date
-360 degree delamination, method investigated, UT, etc			
-failure analysis			
-structural analysis/fea			
-chemical tests planned			
-mechanical/materials tests planned			
-RCA status, method to be used			
-polar crane analysis			
-detension of vertical & horizontal tendons, crater cracks			
-tendon surv status			
-delamination inspection history			
-lessons learnt from other plants			
decay heat loss calculations
