Subject: Telecon w/Progress Energy to Discuss Status of Activities at CR3 - November 5, 2009, 2pm

All,

A telecon with Progress Energy has been scheduled to discuss the licensee's ongoing reviews and planned actions to address the recently identified concrete delamination at Crystal River Unit 3. The licensee intends to share the current results of their condition assessment, progress of their root cause investigation, and design basis review. The licensee will have several technical experts available, so don't hesitate to ask questions, if necessary.

Brian McCabe, Regulatory Affairs Manager, Bob Duncan, VP Nuclear Operations, and Garry Miller, Containment Project Manager will lead the discussions for the licensee. I plan to open the discussion by repeating the purpose for the telecon and I will allow each office to introduce participants. After the introductions, I will turn to Brian McCabe or Garry Miller to begin the PE discussions.

To access the bridge, please call (877)411-9748 and enter access code:
