ATTN: Document Control Desk
U.S. Nuclear Regulatory Commission
Washington, DC 20555-0001

Subject: UniStar Nuclear Energy, NRC Docket No. 52-016
Re-Submittal of the Cyber Security Plan for the Combined License Application for
the Calvert Cliffs Nuclear Power Plant, Unit 3

Reference: UniStar Nuclear Energy Letter UN#10-080, from Greg Gibson to Document
Control Desk, U.S. NRC, Submittal of the Cyber Security Plan for the Combined
License Application for the Calvert Cliffs Nuclear Power Plant, Unit 3, dated
April 02, 2010

The purpose of this letter is to re-submit Revision 0 of the Cyber Security Plan, as Part 11L of the Calvert Cliffs Nuclear Power Plant (CCNPP) Unit 3 Combined License Application (COLA). The Cyber Security Plan is resubmitted to revise the format and the volume of content. Minor editorial changes were made, to support the format change. At the request of the NRC, the Cyber Security Plan in the enclosure of this submittal is the same revision (Rev. 0) as the Cyber Security Plan submitted as Enclosure 2 of the above reference and replaces the Cyber Security Plan that was previously submitted as Enclosure 2 of the referenced submittal, in its entirety.

The enclosure provides the Calvert Cliffs 3 Nuclear Project, LLC Cyber Security Plan, CCNPP Unit 3 COLA Part 11L. A Licensing Basis Document Change Request has been initiated to incorporate the COLA changes necessary to support incorporation of COLA Part 11L, Calvert Cliffs 3 Nuclear Project, LLC Cyber Security Plan, into a future revision of the COLA.

1 {CALVERT CLIFFS 3 NUCLEAR PROJECT, LLC} CYBER SECURITY PLAN

1.1 Introduction

The purpose of this {Calvert Cliffs 3 Nuclear Project, LLC} Cyber Security Plan (the plan) is to describe how the requirements of Title 10 of the *Code of Federal Regulations* (10 CFR) 73.54, "Protection of Digital Computer and Communication Systems and Networks" (the rule) are implemented to protect digital computer and communications systems and networks associated with the following functions from those cyber attacks, up to and including the design-basis threat (DBT) described in 10 CFR 73.1, "Purpose and Scope":

- Safety-related and important-to-safety functions,
- Security functions,
- Emergency preparedness functions, including offsite communications, and
- Support systems and equipment which, if compromised, would adversely impact safety, security, or emergency preparedness functions.

As required by 10 CFR 73.54(e) and 10 CFR 73.55(c)(6), licensees and applicants must establish, implement, and maintain a cyber security plan. This plan establishes the licensing basis for the {Calvert Cliffs 3 Nuclear Project, LLC} Cyber Security Program (the program) for {Calvert Cliffs Nuclear Power Plant Unit 3 (CCNPP Unit 3)}. {Calvert Cliffs 3 Nuclear Project, LLC} acknowledges that the implementation of this plan does not alleviate {Calvert Cliffs 3 Nuclear Project, LLC}'s responsibility to comply with other NRC regulations.

{Calvert Cliffs 3 Nuclear Project, LLC} complies with the requirements of 10 CFR 73.54 by implementing Regulatory Guide (RG) 5.71, "Cyber Security Programs for Nuclear Facilities." RG 5.71 provides a method that the staff of the U.S. Nuclear Regulatory Commission (NRC) considers acceptable for complying with this regulation. RG 5.71 includes a glossary of terms that are used within this plan.

1.2 Cyber Security Plan

1.2.1 Scope and Purpose

This plan describes how {Calvert Cliffs 3 Nuclear Project, LLC} {will establish} a cyber security program to achieve high assurance that {CCNPP Unit 3} digital computer and communication systems and networks associated with safety, security, and emergency preparedness (SSEP) functions, hereafter defined as critical digital assets (CDAs), are adequately protected against cyber attacks up to and including the DBT. The following actions provide high assurance of adequate protection of systems associated with the above functions from cyber attacks:

- Implementing and documenting the "baseline" security controls described in Section C.3.3 of RG 5.71, and
- Implementing and documenting a cyber security program to maintain the established cyber security controls through a comprehensive life cycle approach, as described in Section 1.4 of this plan.

1.2.2 Performance-Based Requirements

As required by 10 CFR 73.55(a)(1), a licensee must implement the requirements of this section through its Commission-approved physical security plan, training and qualification plan, safeguards contingency plan, and cyber security plan, referred to collectively as "security plans." As defined in 10 CFR 73.54(b)(3), cyber security is a component of the physical protection program. As such, this plan establishes how {CCNPP Unit 3} digital computer and communication systems and networks within the scope of 10 CFR 73.54 will be adequately protected from cyber attacks up to and including the DBT.

1.3 CYBER SECURITY PROGRAM IMPLEMENTATION

The {Calvert Cliffs 3 Nuclear Project, LLC} established and maintains a cyber security program that complies with the requirements of 10 CFR 73.54(b)(2) and 10 CFR 73.55(b)(8) to protect those systems within the scope of 10 CFR 73.54(a)(1)(i-iv) that can, if compromised, directly or indirectly have an adverse impact on the SSEP

functions of a nuclear facility. This cyber security program complies with 10 CFR 73.54 by establishing and implementing defensive strategies consistent with the defensive model described in Section 1.3.1.5 of this document, including the security controls described in Sections 1.3.1, 1.3.2, and 1.3.3, and maintaining the program, as described in Section 1.4 of this document.

Documentation of the security controls in place for each CDA is available for inspection. Modifications to the cyber security plan are conducted in accordance with 10 CFR 50.54(p). As required by 10 CFR 50.90, "Application for Amendment of License, Construction Permit, or Early Site Permit," {Calvert Cliffs 3 Nuclear Project, LLC} will submit changes that are determined to decrease the effectiveness of this plan or for any other reason to the NRC for approval. {Calvert Cliffs 3 Nuclear Project, LLC} will also report any cyber attacks or incidents at {CCNPP Unit 3} to the NRC, as required by 10 CFR 73.71, "Reporting of Safeguards Events," and Appendix G, "Reportable Safeguards Events," to 10 CFR Part 73, "Physical Protection of Plants and Materials."

1.3.1 Analyzing Digital Computer Systems

1.3.1.1 Security Assessment and Authorization

{Calvert Cliffs 3 Nuclear Project, LLC} developed and {annually} reviews and updates the following:

- A formal, documented security planning, assessment and authorization policy that describes the purpose, scope, roles, responsibilities, management commitments, and coordination among {Calvert Cliffs 3 Nuclear Project, LLC} {departments} and the implementation of this cyber security program, the controls in Sections 2 and 3 of this plan, and
- A formal, documented procedure to facilitate the implementation of the cyber security program and the security assessment.

1.3.1.2 Cyber Security Team

{Calvert Cliffs 3 Nuclear Project, LLC} established and maintains a cyber security team (CST) consisting of individuals with broad knowledge in the following areas:

- Information and digital system technology—This includes cyber security, software development, offsite communications, computer system administration, computer engineering, and computer networking. Individuals with knowledge of the digital systems involved in plant operations, including digital instrumentation and control systems, and those involved in plant information systems, are included. Plant operational systems include programmable logic controllers, control systems, and distributed control systems. Information systems include computer systems and databases containing information used in the design, operation, and maintenance CDAs. The networking arena includes knowledge of both site- and corporate-wide networks.
- Nuclear facility operations, engineering, and safety—This includes overall facility operations and plant technical specification compliance. {Calvert Cliffs 3 Nuclear Project, LLC} staff representing this technical area trace the impact of a potential vulnerability or series of vulnerabilities in a CDA (or connected digital asset) outward through plant systems and subsystems to ensure that the overall impact on the SSEP functions of the plant is evaluated.
- Physical security and emergency preparedness—This includes the site's physical security and emergency preparedness systems and programs.

The roles and responsibilities of the CST include the following:

- Performing or overseeing each stage of the cyber security management processes;
- Documenting all key observations, analyses, and findings during the assessment process so that this information can be used in the application of security controls;
- Evaluating or reevaluating assumptions and conclusions about current cyber security threats; potential vulnerabilities to, and consequences from, an attack; the effectiveness of existing cyber security controls, defensive strategies, and attack mitigation methods; and cyber security awareness and training of those working with, or responsible for, CDAs and cyber security controls throughout their system life cycles;

- Confirming information acquired during reviews by conducting comprehensive walkdowns of CDAs and connected digital assets and associated cyber security controls, including walkdown inspections with physical and electronic validation activities;
- Identifying and implementing potential new cyber security controls, as needed;
- Preparing documentation and overseeing implementation of the cyber security controls provided in Sections 2 and 3 of this plan, documenting the basis for not implementing certain cyber security controls provided in Section 2 of this plan, or documenting the basis for the implementation of alternate or compensating measures in lieu of any cyber security controls provided in Section 2 of this plan; and
- Assuring the retention of all assessment documentation, including notes and supporting information, in accordance with 10 CFR 73.55(q) and the record retention requirements specified in Section 1.5 of this plan.

The CST conducts objective security assessments, makes {determinations} that are not constrained by operational goals, and resolves these issues using the process described in Section 1.3.1.6 of this plan.

1.3.1.3 Identification of Critical Digital Assets

To identify the CDAs at {CCNPP Unit 3}, {Calvert Cliffs 3 Nuclear Project, LLC}'s CST:

- Identified and documented plant systems, equipment, communication systems, and networks that are associated with the SSEP functions described in 10 CFR 73.54(a)(1), as well as the support systems associated with these SSEP functions. These systems are hereafter referred to as critical systems (CSs). The CST identified CSs by conducting an initial consequence analysis of {CCNPP Unit 3} plant systems, equipment, communication systems, and networks to determine those which, if compromised, exploited, or failed, could impact the SSEP functions of the nuclear facility, without taking into account existing mitigating measures. For those support systems or equipment that are associated with SSEP functions, {Calvert Cliffs 3 Nuclear Project, LLC} performed a dependency and pathway analysis to determine whether those systems or equipment are CSs.
- Identified and documented CDAs that have a direct, supporting, or indirect role in the proper functioning of CSs.

For each CS examined, the {Calvert Cliffs 3 Nuclear Project, LLC} documented the following:

- A general description of each system, asset, or network identified as a CDA
- The identification of CDAs within each CS
- A brief description of the function provided by each CDA
- An analysis that identifies the potential consequence to both the CS and the SSEP functions if a compromise of the CDA were to occur
- The identification of the digital devices that have direct or indirect roles in the function of the CDA (e.g., protection, control, monitoring, reporting, or communications)
- Security functional requirements or specifications that include the following:
 - Information security requirements necessary for vendors and developers to maintain the integrity of acquired systems
 - Secure configuration, installation, and operation of the CDA;
 - Effective use and maintenance of security features/functions; and
 - Known vulnerabilities regarding configuration and use of administrative (i.e., privileged) functions,
 - User-accessible security features/functions and how to effectively use those security features/functions,
 - Methods for user interaction with CDAs, which enables individuals to use the system in a more secure manner,
 - User responsibilities in maintaining the security of the CDA.

1.3.1.4 Reviews and Validation Testing

{Calvert Cliffs 3 Nuclear Project, LLC}'s CST conducted a review and performed validation activities and for each CDA, the CST:

- Its direct and indirect connectivity pathways,
- Infrastructure interdependencies, and
- The application of defensive strategies, including defensive models, security controls, and other defensive measures.

The CST validated the above activities through comprehensive walkdowns which included:

- Performance of a physical inspection of the connections and configuration of each CDA; including tracing all communication connections into and out of the CDA to each termination point along all communication pathways;
- Examination of the physical security established to protect each CDA and its communication pathways;
- Examination of the configuration and assessment of the effectiveness of existing security controls (e.g., firewalls, intrusion detection systems, diodes) along the communication pathways;
- Examination of each CS and/or CDA's interdependencies with other CS and/or CDAs and trust relationships between the CS and/or CDAs;
- Examination of the interdependencies with infrastructure support systems, emphasizing potential compromises of electrical power, environmental controls, and fire suppression equipment;
- Examination of systems, networks, and communication systems and networks that are present within the plant and could be potential pathways for attacks; and
- Resolution of CDA and CS information and configuration discrepancies identified during the reviews, including the presence of undocumented or missing connections, and other cyber security-related irregularities associated with the CDA.

The CST performed an electronic validation when physical walkdown inspections were impractical to trace a communication pathway fully to its conclusion. The team used only electronic validation methods that provide connection validation equivalent to, or better than, physical walkdowns (e.g., use of a digital voltage meter, physical continuity validation).

1.3.1.5 Defense-in-Depth Protective Strategies

{Calvert Cliffs 3 Nuclear Project, LLC} implemented, documented, and maintains a defense-in-depth protective strategy to ensure the capability to detect, respond to, and recover from cyber attacks on CDAs. The defensive strategy consists of security controls implemented in accordance with Section 1.3.1 of this plan and the defensive model described in Section C.3.2 of RG 5.71, defense-in-depth in Section 3.6 of this plan, detailed defense architecture of Section 3.7 of this plan, and maintains the cyber security program in accordance with in Section 1.4 of this plan. The defensive model employed at the site establishes the logical and physical boundaries between CDAs with similar security risks and CDAs with lower security risks.

1.3.1.6 Application of Security Controls

{Calvert Cliffs 3 Nuclear Project, LLC} established defense-in-depth protective strategies by implementing and documenting the following:

- The defensive model described in Section C.3.2 of RG 5.71,
- The physical and administrative security controls established by the {CCNPP Unit 3} Physical Security Program and physical barriers, such as locked doors, locked cabinets, and locating CDAs in the {CCNPP Unit 3} protected area or vital area, which are part of the overall security controls used to protect CDAs from attacks,
- The operational and management controls described in Section 3 of this plan and verification of their effectiveness for each CDA, and

- The technical controls described in Section 2 of this plan consistent with the process described below.

With respect to technical security controls, {Calvert Cliffs 3 Nuclear Project, LLC} used the information collected in Section 1.3.1.4 of this plan to conduct one or more of the following for each CDA:

- Implementation of all of the security controls specified in Section 2 of this plan
- For a security control that could not be applied, implementation of alternative controls that eliminate threat/attack vectors associated with one or more of the security controls enumerated in Section 2 of this plan by:
 - Documenting the basis for employing alternative countermeasures
 - Performing and documenting an attack vector and attack tree analysis of the CDA and alternative controls to confirm that the countermeasures provide the same or greater protection as the corresponding security control identified in Section 2 of this plan
 - Ensuring that the alternative controls provide at least the same degree of protection as the corresponding security control identified in Section 2 of this plan
- Not implementing one or more of the security controls enumerated in Section 2 of this plan by:
 - Performing an attack vector and attack tree analyses of the specific security controls for the CDA that will not be implemented
 - Documenting that the attack vector does not exist (i.e., is not applicable), thereby demonstrating that those specific security controls are not necessary

{Calvert Cliffs 3 Nuclear Project, LLC} did not apply a security control when it was determined that the control would adversely impact SSEP functions. When a security control was determined to have an adverse effect, then alternate controls were used to mitigate the lack of the security control for the CDA in accordance with the process described above.

{Calvert Cliffs 3 Nuclear Project, LLC} performed an effectiveness analysis, as described in Section 1.4.1.2, and vulnerability assessments/scans, as described in Section 1.4.1.3, of the CDAs to verify that the security program provides high assurance that CDA are adequately protected from cyber attack, up to and including the DBT and has closed any identified gaps.

1.3.2 Incorporating the Cyber Security Program into the Physical Protection Program

Chapter 23 of the physical security plan references the {CCNPP Unit 3} Cyber Security Program, in accordance with 10 CFR 73.54(b)(3), 10 CFR 73.55(a)(1), and 10 CFR 73.55(c)(6). {Calvert Cliffs 3 Nuclear Project, LLC} also considered cyber attacks during the development and identification of target sets, as required by the Physical Security Program and 10 CFR 73.55(f)(2).

{Calvert Cliffs 3 Nuclear Project, LLC} integrated the management of physical and cyber security as follows:

- Established a unified security organization which incorporates both cyber and physical security and is independent from operations,
- Documented physical and cyber security interdependencies,
- Developed policies and procedures to integrate and unify management and physical and cyber security controls,
- Incorporated unified policies and procedures to secure CDAs from attacks up to and including the DBT,
- Coordinated acquisition of physical or cyber security services, training, devices, and equipment,
- Coordinated interdependent physical and cyber security activities and training with physical and cyber security personnel,
- Integrated and coordinated incident response capabilities with physical and cyber incident response personnel,
- Trained senior management regarding the needs of both disciplines, and

- Periodically exercise the entire security organization using realistic scenarios combining both physical and cyber simulated attacks.

The Cyber Security Program is reviewed as a component of the Physical Security Program, as required by 10CFR73.55(m).

1.3.3 Policies and Implementing Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} developed policies and implementing procedures to meet the security control objectives provided in Sections 2 and 3 of this plan. {Calvert Cliffs 3 Nuclear Project, LLC} documented, reviewed, approved, issued, used, and revised these policies and implementing procedures as described in Section 1.4 of this plan. In addition, personnel responsible for the implementation and oversight of the program report to {the CCNPP Unit 3 Site Vice President} who is accountable for nuclear plant operation.

{Calvert Cliffs 3 Nuclear Project, LLC}'s procedures establish the specific responsibilities of the positions described in Section 3.10.10 of this plan.

1.4 MAINTAINING THE CYBER SECURITY PROGRAM

This section establishes the programmatic elements necessary to maintain security throughout the life cycle of CDAs. {Calvert Cliffs 3 Nuclear Project, LLC} implemented the elements of this section to maintain high assurance that CDAs associated with the SSEP functions of {CCNPP Unit 3} are adequately protected from cyber attacks.

{Calvert Cliffs 3 Nuclear Project, LLC} employs a life cycle approach consistent with the controls described in Section 3 of this plan. This approach ensures that the security controls established and implemented for CDAs are adequately maintained to achieve the site's overall cyber security program objectives. For proposed new digital assets, or existing digital assets that are undergoing modification, {Calvert Cliffs 3 Nuclear Project, LLC} implements the process described in Section 1.4.2 of this plan.

{Calvert Cliffs 3 Nuclear Project, LLC} maintains records in accordance with Section 1.5 of this plan.

1.4.1 Continuous Monitoring and Assessment

{Calvert Cliffs 3 Nuclear Project, LLC} continuously monitors security controls consistent with Section 3 of this plan. Automated support tools are also used, as appropriate, to accomplish near real-time cyber security management for CDAs. The continuous monitoring program includes the following:

- Ongoing assessments to verify that the security controls implemented for each CDA remain in place throughout the life cycle,
- Verification that rogue assets have not been connected to the infrastructure,
- Periodic assessments of the need for and effectiveness of the security controls identified in Sections 2 and 3 of this plan, and
- Periodic security program review to evaluate and improve the effectiveness of the program.

This element of the program is mutually supportive of the activities conducted to manage configuration changes of CDAs. Continuous monitoring may require periodic updates to the cyber security plan.

1.4.1.1 Periodic Assessment of Security Controls

{Calvert Cliffs 3 Nuclear Project, LLC} performs periodic assessments to verify that the security controls implemented for each CDA remain robust, resilient, and effective in place throughout the life cycle. The CST verifies the status of these security controls {on at least an annual basis} or in accordance with the specific requirements for each security control, as described in Sections 2 and 3 of this plan, whichever is more frequent.

1.4.1.2 Effectiveness Analysis

The CST monitors and measures the effectiveness and efficiency of the Cyber Security Program and the security controls to ensure that both are implemented correctly, operating as intended, and continuing to provide high assurance that CDAs are protected against cyber attacks up to and including the DBT. Reviews of the security

program and controls includes, but are not limited to, periodic testing of the security controls, re-evaluation of the capabilities of the adversaries of the DBT, audits of the Physical and Cyber Security Programs and implementing procedures; safety/security interface activities; the Testing, Maintenance, and Calibration Program; operating experience; and feedback from the NRC and local, State, and Federal law enforcement authorities.

The insights gained from these analyses are used to:

- Improve performance and effectiveness of the cyber security program,
- Manage and evaluate risk,
- Improve the effectiveness of implemented security controls described in Sections 2 and 3 of this plan,
- Ascertain whether new security controls are required to protect CDAs from cyber attack,
- To verify that existing security controls are functioning properly and are effective at protecting CDAs from cyber attack, and
- To facilitate corrective action of any gaps discovered in the security program.

The CST verifies the effectiveness of security controls {on at least an annual basis} or in accordance with the specific requirements for each security control, as described in Sections 2 and 3 of this plan, whichever is more frequent. The CST reviews records of maintenance and repairs on CDA components to ensure that CDAs which perform security functions are maintained per recommendations provided by the manufacturer.

1.4.1.3 Vulnerability Assessments and Scans

{Calvert Cliffs 3 Nuclear Project, LLC}'s CST conducts periodic vulnerability scanning and assessments of the security controls, defensive architecture and of all CDAs to identify security deficiencies. The CST performs assessments of security controls and scans for vulnerabilities in CDAs and the environment {no less frequently than once a quarter} or as specified in the security controls in Sections 2 and 3 of this plan, whichever is more frequent, and when new vulnerabilities that could potentially affect the effectiveness the security program and security of the CDAs are identified. In addition, the CST employs up-to-date vulnerability scanning tools and techniques that promote interoperability among tools and automate parts of the vulnerability management process.

{Calvert Cliffs 3 Nuclear Project, LLC}'s CST analyzes vulnerability assessment and scan reports and addresses vulnerabilities that could be exploited to compromise CDAs and vulnerabilities that could adversely impact SSEP functions. The CST shares information obtained from the vulnerability assessment and scanning process with appropriate personnel to ensure that similar vulnerabilities that may adversely impact the effectiveness of the security of interconnected or similar CDAs and/or may adversely impact SSEP functions are understood, evaluated, and mitigated.

{Calvert Cliffs 3 Nuclear Project, LLC} ensures that the assessment and scanning process does not adversely impact SSEP functions. If this should occur, CDAs will be removed from service or replicated (to the extent feasible) before assessment and scanning is conducted. If {Calvert Cliffs 3 Nuclear Project, LLC} cannot conduct vulnerability assessments or scanning on a production CDA because of the potential for an adverse impact on SSEP functions, alternate controls (e.g., providing a replicated system or CDA to conduct scanning) will be employed.

1.4.2 Change Control

{Calvert Cliffs 3 Nuclear Project, LLC} systematically plans, approves, tests, and documents changes to the environment of the CDAs, the addition of CDAs to the environment and changes to existing CDAs in a manner that provides a high level of assurance that the SSEP functions are protected from cyber attacks. During the operation and maintenance life cycle phases, the program establishes that changes made to CDAs use the {design control and configuration management procedures or other procedural processes} to ensure that the existing security controls are effective and that any pathway that can be exploited to compromise a CDA is protected from cyber attacks.

During the retirement phase, the {design control and configuration management procedures or other procedural processes} address safety, reliability, and security engineering activities.

1.4.2.1 Configuration Management

{Calvert Cliffs 3 Nuclear Project, LLC} has implemented and documented the configuration management controls described in Section 3.11 of this plan. {Calvert Cliffs 3 Nuclear Project, LLC} implements a configuration and change management process, as described in Section 1.4.2 of this plan and Section 3.11 of this plan, to ensure that the site's Cyber Security Program objectives remain satisfied. {Calvert Cliffs 3 Nuclear Project, LLC} ensures that modifications to CDAs are evaluated in accordance with Section 1.4.2 of this plan before any modification is implemented so as to maintain the cyber security performance objectives articulated in 10CFR73.54(a)(1).

During the operation and maintenance phases of a CDA life cycle, the {Calvert Cliffs 3 Nuclear Project, LLC} ensures that changes made are conducted using these configuration management procedures to avoid the introduction of additional vulnerabilities, weaknesses, or risks into the system. This process also ensures timely and effective implementation of each security control specified in Sections 2 and 3 of this plan.

1.4.2.2 Security Impact Analysis of Changes and Environment

{Calvert Cliffs 3 Nuclear Project, LLC}'s CST performs a security impact analysis in accordance with Section 1.4.1.2 before implementing a design or configuration change to a CDA or when changes to the environment occur so as to manage potential risks introduced by the changes.

{Calvert Cliffs 3 Nuclear Project, LLC}'s CST evaluates, documents, and incorporates into the security impact analysis safety and security interdependencies of other CDAs or systems, as well as updates and documents the following:

- The location of the CDA and connected assets,
- Connectivity pathways (direct and indirect),
- Infrastructure interdependencies,
- Application of defensive strategies, including defensive models, security controls, and other defensive strategy measures, and
- Plantwide physical and cyber security policies and procedures that secure CDAs from a cyber attack, including attack mitigation and incident response and recovery.

{Calvert Cliffs 3 Nuclear Project, LLC} performs these impact analyses as part of the change approval process to assess the impacts of the changes on the security posture of CDAs and security controls, as described in Section 1.4.1.2 of this plan, and to address any identified gaps to protect CDAs from cyber attack, up to and including the DBT as described in Section 1.4.2.6.

{Calvert Cliffs 3 Nuclear Project, LLC} manages CDAs for the cyber security of SSEP functions through an ongoing evaluation of threats and vulnerabilities and implementation of each of the security controls provided in Sections 2 and 3 of this plan during all phases of the life cycle. Additionally, {Calvert Cliffs 3 Nuclear Project, LLC} has established and documented procedures for screening, evaluating, mitigating, and dispositioning threat and vulnerability notifications received from credible sources. Dispositioning includes implementation of security controls to mitigate newly reported or discovered threats and vulnerabilities.

1.4.2.3 Security Reassessment and Authorization

{Calvert Cliffs 3 Nuclear Project, LLC} has established, implemented, documented, and maintains a process that ensures that modifications to CDAs are evaluated before implementation so that security controls remain effective and that any pathway that can be exploited to compromise the modified CDA is addressed to protect CDAs and SSEP functions from cyber attacks. The program establishes that additions and modifications are evaluated, using a proven and accepted method, before implementation to provide high assurance of adequate protection against cyber attacks, up to and including the DBT, using the process discussed in Section 1.4.1.2 of this plan.

{Calvert Cliffs 3 Nuclear Project, LLC} disseminates, reviews, and updates the following when a CDA modification is conducted:

- A formal, documented security assessment and authorization policy which addresses the purpose, scope, roles, responsibilities, management commitment, coordination among {Calvert Cliffs 3 Nuclear Project, LLC} entities, and compliance to reflect all modifications or additions, and

- A formal, documented procedure to facilitate the implementation of the security reassessment and authorization policy and associated controls.

1.4.2.4 Updating Cyber Security Practices

The {Calvert Cliffs 3 Nuclear Project, LLC}'s CST reviews, updates and modifies {CCNPP Unit 3} cyber security policies, procedures, practices, existing cyber security controls, detailed descriptions of network architecture (including logical and physical diagrams), information on security devices, and any other information associated with the state of the security program or security controls provided in Sections 2 and 3 of this plan when changes occur to CDAs or the environment. This information includes the following:

- Plant- and corporate-wide information on the policies, procedures, and current practices related to cyber security;
- Detailed network architectures and diagrams;
- Configuration information on security devices or CDAs;
- New plant- or corporate-wide cyber security defensive strategies or security controls being developed and policies, procedures, practices, and technologies related to their deployment,
- The site's physical and operational security program;
- Cyber security requirements for vendors and contractors;
- Identified potential pathways for attacks;
- Recent cyber security studies or audits (to gain insight into areas of potential vulnerabilities); and
- Identified infrastructure support systems (e.g., electrical power; heating, ventilation, and air conditioning; communications; fire suppression) whose failure or manipulation could impact the proper functioning of CSs.

1.4.2.5 Review and Validation Testing of a Modification or Addition of a Critical Digital Asset

The {Calvert Cliffs 3 Nuclear Project, LLC}'s CST conducts and documents the results of reviews and validation tests of each CDA modification and addition using the process described in Section 1.3.1.4 of this plan.

1.4.2.6 Application of Security Controls Associated with a Modification or Addition

When new CDAs are introduced into the environment, the {Calvert Cliffs 3 Nuclear Project, LLC}:

- Deploys the CDA into the appropriate level of the defensive model described in Section 1.3.1.5 of this plan,
- Applies the technical controls identified in Section 2 of this plan in a manner consistent with the process described in Section C.3.2 of RG 5.71, and
- Confirms that the operational and management controls described in Section 2 of this plan are applied and effective for the CDA.

When CDAs are modified, the {Calvert Cliffs 3 Nuclear Project, LLC}:

- Verifies that the CDA is deployed into the proper level of the defensive model described in Section C.3.2 of RG 5.71,
- Performs a security impact analysis, as described in Section 1.4.2.2 of this plan,
- Verifies that the technical controls identified in Section 2 of this plan are implemented in a manner consistent with the process described in Section 1.3.1.6 of this plan,
- Verifies that the security controls discussed above are implemented effectively, consistent with the process described in Section 1.4.1.2 of this plan, and
- Confirms that the operational and management controls discussed in Section 3 of this plan are applied and effective for the CDA.

1.4.3 Cyber Security Program Review

{Calvert Cliffs 3 Nuclear Project, LLC} Cyber Security Program establishes the necessary measures and governing procedures to implement periodic reviews of applicable program elements, in accordance with the requirements of 10 CFR 73.55(m).

{Calvert Cliffs 3 Nuclear Project, LLC} reviews the program's effectiveness {at least every 24 months}. In addition, reviews are conducted as follows:

- Within 12 months of the initial implementation of the program;
- Within 12 months of a change to personnel, procedures, equipment, or facilities that potentially could adversely affect security;
- As necessary based upon site-specific analyses, assessments, or other performance indicators; and
- By individuals independent of those personnel responsible for program implementation and management.

{Calvert Cliffs 3 Nuclear Project, LLC} documents the results and recommendations of program reviews, management's findings regarding program effectiveness, and any actions taken as a result of recommendations from prior program review, in a report to the {CCNPP Unit 3} {plant manager and to licensee corporate management} at least one level higher than the individual having responsibility for day-to-day plant operation. {Calvert Cliffs 3 Nuclear Project, LLC} maintains these reports in an auditable form, available for inspection, and enters findings from program reviews into the site's Corrective Action Program.

1.5 DOCUMENT CONTROL AND RECORDS RETENTION AND HANDLING

{Calvert Cliffs 3 Nuclear Project, LLC} has established the necessary measures and governing procedures to ensure that sufficient¹ records of items and activities affecting cyber security are developed, reviewed, approved, issued, used, and revised to reflect completed work. {Calvert Cliffs 3 Nuclear Project, LLC} will retain records and supporting technical documentation required to satisfy the requirements of 10 CFR 73.54 and 10 CFR 73.55, "Requirements for Physical Protection of Licensed Activities in Nuclear Power Reactors against Radiological Sabotage," until the NRC terminates the facility operating license. Records required for retention include, but are not limited to, all digital records, log files, audit files, and nondigital records that capture, record, and analyze network and CDA events. These records are retained to document access history and discover the source of cyber attacks or other security-related incidents affecting CDAs or SSEP functions or both. {Calvert Cliffs 3 Nuclear Project, LLC} will retain superseded portions of these records for at least 3 years after the record is superseded, unless otherwise specified by the NRC.

¹ {Sufficient is defined as in all controls implemented where applicable by Calvert Cliffs Nuclear Project, LL via Appendix A and Appendix B of 51-7002224 (Latest Revision)}

2 : TECHNICAL SECURITY CONTROLS

2.1 Access Controls

2.1.1 Access Control Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} developed, disseminated, and {annually} reviews and updates a formal, documented, "critical digital asset" (CDA) access control policy which addresses the purpose, scope, roles, responsibilities, management commitments, and internal coordination of such policy. {Calvert Cliffs 3 Nuclear Project, LLC} has also developed formal, documented procedures to facilitate the implementation of the access control policy and associated access security controls.

The objective of the access control policy is to provide high assurance that only authorized individuals, or processes acting on their behalf, can access CDAs and perform authorized activities. The access control policy addresses the following system-specific requirements: account management, access enforcement, information flow enforcement, separation of functions, least privilege, unsuccessful login attempts, system use notification, previous login notification, session lock, supervision and review/access control, permitted actions without identification or authentication, automated marking, automated labeling, network access control, open/insecure protocol restrictions, wireless access restrictions, insecure and rogue connections and access control for portable and mobile devices and use of external CDAs proprietary protocol visibility, third party products and controls, and use of external systems.

The access control policy addresses the following:

- Access control rights (i.e., which individuals and processes can access what resources) and access control privileges (i.e., what these individuals and processes can do with the resources accessed),
- Management of CDAs (i.e., establishing, activating, modifying, reviewing, disabling, and removing accounts),
- Protection of password/key databases to prevent unauthorized access to master user and password lists,
- Auditing of CDAs {annually} or immediately upon changes in personnel responsibilities or major changes in system configurations or functionality, and
- Separation of duties (i.e., through assigned access authorizations).

2.1.2 Account Management

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Managing and documenting CDA accounts, including authorizing, establishing, activating, modifying, reviewing, disabling, and removing accounts,
- Reviewing CDA accounts in a manner consistent with the access control list provided in the {design control package, access control program, cyber security procedures} and initiating required actions on CDA accounts {no less frequently than once every 30 days},
- Requiring access rights to be job function based,
- Conducting reviews when as individuals job function changes to ensure that rights remain limited to the individuals job function,
- Reviewing and documenting CDA accounts at a maximum interval consistent with the most recent version of Nuclear Energy Institute (NEI) 03-12, "Security Plan, Training and Qualification Plan, and Safeguards Contingency Plan," endorsed by the U.S. Nuclear Regulatory Commission (NRC), and
- Employing automated mechanisms that support CDA account management functions and enable CDA to automatically:
 - Terminate temporary, guest, and emergency accounts {no less frequently than once every 30 days}
 - Disable inactive accounts {no less frequently than once every 30 days}
 - Create and protect audit records for account creation, deletion, and modification

- Document and notify system administrators of all account creation, deletion, and Modification activities so that system administrators are aware of any account Modifications and can investigate potential cyber attacks in a timely manner.

2.1.3 Access Enforcement

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Enforcing assigned authorizations for controlling access to CDAs in accordance with established policies and procedures,
- Assigning all user rights and privileges on the CDA consistent with the user authorizations,
- Defining and documenting privileged functions and security-relevant information for the CDAs,
- Authorizing personnel access to privileged functions and security-relevant information consistent with established policies and procedures,
- Restricting access to privileged functions (deployed in hardware, software, and firmware) and security-relevant information to authorized personnel (e.g., security administrators),
- Defining and documenting privileged functions for CDAs,
- Requiring dual authorization for critical privileged functions and the creation of any privileged access for users, and
- Ensuring and documenting that access enforcement mechanisms do not adversely impact the operational performance of CDAs and employing alternate compensating security controls when access enforcement cannot be used.

2.1.4 Information Flow Enforcement

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Enforcing and documenting assigned authorizations for controlling the flow of information, in near-real time, within CDAs and between interconnected systems in accordance with the established defensive strategy,
- Maintaining documentation that demonstrates that {Calvert Cliffs 3 Nuclear Project, LLC} has analyzed and addressed the types of permissible and impermissible flow of information between CDAs, security boundary devices, and boundaries and the required level of authorization to allow information flow as defined in the defensive strategy,
- Implementing and documenting information flow control enforcement using protected processing level (e.g., domain type-enforcement) as a basis for flow control decisions,
- Implementing near-real time capabilities to detect, deter, prevent, and respond to illegal or unauthorized information flows,
- Preventing encrypted data from bypassing content-checking mechanisms,
- Implementing one-way data flows using hardware mechanisms,
- Implementing dynamic information flow control based on policy that allows or disallows information flows based on changing conditions or operational considerations, and
- Configuring CDAs such that user credentials are not transmitted in clear text and documenting this requirement in the access control policy.

2.1.5 Separation of Functions

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Establishing and documenting divisions of responsibility and separating functions as needed to eliminate conflicts of interest and to ensure independence in the responsibilities and functions of individuals,
- Enforcing separation of CDA functions through assigned access authorizations,

- Implementing alternative controls and documenting the justification for alternative controls and countermeasures for increased auditing for those situations in which a CDA cannot support the differentiation of roles and a single individual must perform all roles within the CDA, and
- Restricts security functions to the least amount of users necessary to ensure the security of CDAs.

2.1.6 Least Privilege

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Assigning the most restrictive set of rights and privileges or access needed by users for the performance of specified tasks,
- Configuring CDAs to enforce the most restrictive set of rights and privileges or access needed by users, and
- Implementing alternative controls and documenting the justification for alternative controls and countermeasures for increased auditing for situations in which a CDA cannot support the differentiation of privileges within the CDA and an individual must perform all roles within the CDA.

2.1.7 Unsuccessful Login Attempts

{Calvert Cliffs 3 Nuclear Project, LLC} ensures the following:

- Security controls are implemented to limit the number of invalid access attempts by a user. The access control policy documents this requirement. The number of failed login attempts in a specified time period may vary by CDA. For example, more than three invalid attempts within a 1-hour time period will automatically lock out the account. The {Calvert Cliffs 3 Nuclear Project, LLC} system enforces the lock out mode automatically.
- The access control policy includes a requirement that only authorized individuals, who are not the user, can unlock accounts once the maximum number of unsuccessful login attempts has been exceeded. Alternatively, other verification techniques or mechanisms that incorporate identity challenges are used.
- The access control policy documents the justification and details for alternative controls or countermeasures for those instances in which a CDA cannot support account/node locking or delayed login attempts. If a CDA cannot perform account/node locking or delayed logins because of significant adverse impact on performance, safety, or reliability, the {Calvert Cliffs 3 Nuclear Project, LLC} employs alternative controls or countermeasures that include the following:
 - Real-time logging and recording of unsuccessful login attempts, and
 - Real-time alerting of designated personnel with the security expertise for the CDA through alarms when the number of defined consecutive invalid access attempts is exceeded.

2.1.8 System Use Notification

{Calvert Cliffs 3 Nuclear Project, LLC} ensures the following:

- A "system use notification" message is displayed before granting system access informing potential users of the following:
 - The user is accessing a restricted system.
 - System usage is monitored, recorded, and subject to audit.
 - Unauthorized use of CDA is prohibited and subject to criminal and civil penalties. The use of CDAs indicates consent to monitoring and recording.
- The CDA system use notification message provides privacy and security notices.
- The CDA system use notification message is approved before its use.
- The CDA system use notification message remains on the screen until the user takes explicit actions to log on to the CDA.
- Physical notices are installed in those instances in which a CDA cannot support system use notifications.

2.1.9 Previous Logon Notification

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Upon successful logon, configuring CDA to display the date and time of the last logon and the number of unsuccessful logon attempts since the last successful logon, and
- Requiring all end users to report any suspicious activity to the Cyber Security Program manager.

2.1.10 Session Lock

{Calvert Cliffs 3 Nuclear Project, LLC} configures CDAs to do the following:

- Initiate a session lock after {within 30 minutes of inactivity},
- Provide the capability for users to directly initiate session lock mechanisms,
- Maintain the session lock on a CDA until the user reestablishes access using identification and authentication procedures, and
- Implement alternative controls and document the justification for alternative controls or countermeasures for those instances in which a CDA cannot support session locks and:
 - Physically restrict access to the CDA,
 - Monitor and record physical access to the CDA to detect and respond to intrusions in a timely manner,
 - Use auditing or validation measures (e.g., security guard rounds, periodic monitoring of tamper seals) to detect unauthorized access and modifications to the CDAs,
 - Ensure that individuals who have access to the CDA are qualified, and
 - Ensure that those individuals are trustworthy and reliable, in accordance with 10 CFR 73.56.

2.1.11 Supervision and Review—Access Control

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Documenting, supervising, and reviewing the activities of users with respect to the enforcement and usage of access controls, and
- Employing automated mechanisms within CDAs to support and facilitate the review of user activities.

2.1.12 Permitted Actions without Identification or Authentication

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Identifying and documenting specific user actions that can be performed on CDAs during normal and emergency conditions without identification or authentication, and
- Permitting actions to be performed without identification and authentication only to the extent necessary to accomplish mission objectives, without adversely affecting safety, security, and emergency preparedness (SSEP) functions, and in a manner consistent with NRC regulations.

2.1.13 Automated Marking

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Identifying and implementing standard naming conventions for identification of special dissemination, handling, or distribution instructions in compliance with a policy and set of procedures to ensure that sensitive information is protected from inadvertent disclosure and 10 CFR 73.21, "Protection of Safeguards Information: Performance Requirements," and
- Ensuring that CDAs are configured to mark hard and soft copy output using standard naming conventions to identify any special dissemination, handling, or distribution instructions (e.g., Security Related Information).

2.1.14 Automated Labeling²

{Calvert Cliffs 3 Nuclear Project, LLC} labels hard and soft copy information in storage, in process, and in transmission.

2.1.15 Network Access Control

{Calvert Cliffs 3 Nuclear Project, LLC} employs and documents mitigation techniques to secure CDAs through {media access control address locking, physical or electrical isolation, static tables, encryption, or monitoring}.

2.1.16 "Open/Insecure" Protocol Restrictions

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Documenting and implementing additional precautions to protect networks and bus communications from unauthorized access when protocols lack security controls,
- Prohibiting the protocols from initiating commands except within the same boundary, and
- Prohibiting these protocols from initiating commands that could change the state of the CDA from a more secured posture to a less secured posture.

2.1.17 Wireless Access Restrictions

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Only allowing wireless access through a boundary security control device and treating wireless connections as outside of the security boundary,
- Prohibiting the use of wireless technologies for CDAs associated with safety-related and important-to-safety functions,
- Disabling wireless capabilities when not utilized,
- Establishing usage restrictions and implementation guidance for wireless technologies,
- Documenting, justifying, authorizing, monitoring, and controlling wireless access to CDAs and ensuring that the wireless access restrictions are consistent with defensive strategies and defensive models, as articulated in RG 5.71, and
- Conducting scans {no less frequently than once every week} for unauthorized wireless access points, in accordance with this document, and disabling access points if unauthorized access points are discovered.

2.1.18 Insecure and Rogue Connections

{Calvert Cliffs 3 Nuclear Project, LLC} verifies that, during deployment of CDAs, when changes or modifications have been made to CDAs, and {no less frequently than once every month}, CDAs are free of insecure and rogue connections such as vendor connections and modems.

2.1.19 Access Control for Portable and Mobile Devices

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Establishing and documenting usage restrictions and implementation guidance for controlled portable and mobile devices,
- Authorizing, monitoring, and controlling device access to CDAs,
- Enforcing and documenting that mobile device security and integrity are maintained at a level consistent with the CDA they support, and

²{All information hard and soft copy will be labeled where possible. The information will be labeled in accordance with Calvert Cliffs Nuclear Project, LLC policies and procedures.}

- Enforcing and documenting that mobile devices are only used in one security level and that mobile devices are not moved between security levels.

2.1.20 Proprietary Protocol Visibility

{Calvert Cliffs 3 Nuclear Project, LLC} ensures that, when proprietary protocols that create a lack of visibility are used (e.g., systems cannot detect attacks because the protocol is proprietary), alternative controls or countermeasures are implemented to protect the CDAs from cyber attack up to and including the design-basis threat (DBT).

2.1.21 Third Party Products and Controls

{Calvert Cliffs 3 Nuclear Project, LLC} ensures that for situations in which (1) third-party security solutions are not allowed because of vendor license and service agreements and (2) loss of service support would occur if third-party applications were to be installed without vendor acknowledgement or approval, alternative controls or countermeasures are implemented to mitigate vulnerabilities created by the lack of security functions provided by third-party products.

2.1.22 Use of External Systems

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Ensuring that external systems cannot be accessed from higher levels, such as Levels 4 and 3,
- Prohibiting external systems from accessing CDAs in Levels 3 and 4, and
- Prohibiting users from using an external system to access CDAs or to process, store, or transmit organization-controlled information except in situations in which {Calvert Cliffs 3 Nuclear Project, LLC} verifies the implementation of equivalent security measures on the external system.

2.1.23 Publicly Accessible Content

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Designates individuals authorized to post information onto a {Calvert Cliffs 3 Nuclear Project, LLC} system that is publicly accessible;
- Trains authorized individuals to ensure that publicly accessible information does not contain information that could cause an adverse impact on SSEP functions or could assist an adversary in carrying out an attack;
- Ensuring that information that could cause an adverse impact on SSEP functions or could assist an adversary in carrying out an attack is not released to the public,

2.2 Audit and Accountability

2.2.1 Audit and Accountability Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} developed, disseminated, and {annually} reviews and updates the following while using an independent party for the audit reviews:

- A formal, documented audit and accountability policy that addresses the purpose, scope, roles, responsibilities, management commitments, and internal coordination of the policy, and
- Formal, documented procedures that facilitate the implementation of the audit and accountability policy and associated audit and accountability security controls.

2.2.2 Auditable Events

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Determining and documenting with SSEP functions those CDAs related events that require auditing,
- Defining the list of auditable events and frequency of auditing for each identified auditable event,

- At a minimum, auditing all CDA connections, user login/logouts, configuration/software/firmware changes, audit setting changes, privileged access, privileged commands, and any modifications of the security functions of CDAs,
- Implementing alternative controls and documenting the justification for alternative controls and countermeasures for situations in which a CDA cannot support the use of automated mechanisms to generate audit records and employs nonautomated mechanisms and procedures,
- Reviewing and updating the list of defined auditable events {no less frequently than once a year},
- Including execution of privileged functions in the list of events to be audited by the CDAs,
- Preventing CDAs from purging audit event records on restart,
- Coordinating security audit functions within the facility to enhance mutual support and to help guide the selection of auditable events,
- Configuring all CDAs so that auditable events are adequate to support after-the-fact investigations of security incidents, and
- Adjusting the events to be audited within the CDAs based on current threat information and effectiveness analysis described in Section 1.4.1.2 of this plan.

2.2.3 Content of Audit Records

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Ensuring that CDAs produce audit records that contain sufficient information to establish what events occurred, when the events occurred, where the events occurred, the sources of the events, and the outcomes of the events;
- Ensuring that CDAs provide the capability to include additional, more detailed information in the audit records for audit events identified by type, location, or subject; and
- Implementing architecture that provides the capability to centrally manage the content of audit records generated by individual components throughout CDAs, and to prevent CDAs from altering or destroying audit records.

2.2.4 Audit Storage Capacity

{Calvert Cliffs 3 Nuclear Project, LLC} allocates audit record storage capacity, meets NRC record retention requirements, and configures auditing to reduce the likelihood of such capacity being exceeded.

2.2.5 Response to Audit Processing Failures

{Calvert Cliffs 3 Nuclear Project, LLC} ensures the following:

- CDAs provide a warning when allocated audit record storage volume reaches a defined percentage of maximum audit record storage capacity, which is based on {the function of how quickly storage capacity is consumed and what the organization's resources and response times are} and documented.
- Justification and details for alternate compensating security controls are documented for those instances in which a CDA cannot respond to audit processing failures.
- Responses to audit failures by the {Calvert Cliffs 3 Nuclear Project, LLC} include the use of an external system to provide these capabilities.
- If audit processing capabilities fail for a CDA or security boundary device, the following occurs:
 - Alerts are sent to designated {Calvert Cliffs 3 Nuclear Project, LLC} officials in the event of an audit processing failure.
 - Auditing failures are treated as a failure of the CDA or security boundary device and {Calvert Cliffs 3 Nuclear Project, LLC} will take action in accordance with the technical specification.
 - CDAs with auditing failures take the following additional actions:

- Shut down the CDA.
- Failover to a redundant CDA where necessary to prevent adverse impact to safety, security, or emergency preparedness functions.
- Overwrite only the oldest audit records.
- Stop generating audit records.

2.2.6 Audit Review, Analysis, and Reporting

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Reviewing and analyzing the CDA audit records {no less frequently than once every 30 days} for indications of inappropriate or unusual activity and reporting findings to designated {Calvert Cliffs 3 Nuclear Project, LLC} official,
- Adjusting the level of audit review, analysis, and reporting within the CDAs when there is a change in threat or risk to {Calvert Cliffs 3 Nuclear Project, LLC} safety, security, and emergency preparedness functions based on credible sources of information as designated by {Calvert Cliffs 3 Nuclear Project, LLC} or the NRC, and
- Employing automated mechanisms on CDAs to integrate audit review, analysis, and reporting into {Calvert Cliffs 3 Nuclear Project, LLC} processes for investigation and response to suspicious activities.

2.2.7 Audit Reduction and Report Generation

{Calvert Cliffs 3 Nuclear Project, LLC} has configured and deployed all CDA to do the following:

- Provide CDA audit reduction and report generation capability, and
- Provide the capability to automatically process audit records for events of interest based upon selectable event criteria.

{Calvert Cliffs 3 Nuclear Project, LLC} documents the justification and details for alternate compensating security controls for situations in which a CDA cannot support auditing reduction and report generation by providing this capability through a separate system.

2.2.8 Time Stamps

{Calvert Cliffs 3 Nuclear Project, LLC} CDAs use a time source protected at an equal or greater level than the CDAs or an internal system clocks to generate time stamps for audit records, and {Calvert Cliffs 3 Nuclear Project, LLC} synchronizes the time on all CDAs.

{Calvert Cliffs 3 Nuclear Project, LLC} synchronizes the time of all CDAs from a dedicated source protected at an equal or greater level than the CDA existing on the security network, attached directly to the CDA or via SNTP and a trusted key management process.

{Calvert Cliffs 3 Nuclear Project, LLC} implements only methods of time synchronization that do not introduce a vulnerability to cyber attack and/or common-mode failure and implements alternative controls to manage potential cyber security risks when time synchronization can not be used for a CDA.

2.2.9 Protection of Audit Information³

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Protecting audit information and audit tools from unauthorized access, modification, and deletion in a manner consistent with the CDA sources, and
- Ensuring that all audit information is protected at the same level as the device sources.

³ {All audit information will be protected at the same level as the device sources as applicable. The audit information will be protected and stored in accordance with Calvert Cliffs Nuclear Project, LLC records retention policies and procedures.}

2.2.10 Nonrepudiation

{Calvert Cliffs 3 Nuclear Project, LLC} protects CDAs and audit records against an individual falsely denying they performed a particular action.

2.2.11 Audit Record Retention

{Calvert Cliffs 3 Nuclear Project, LLC} retains audit records consistent with the recordkeeping requirements for the access authorization program to provide support for after-the-fact investigations of security incidents and to meet regulatory and {Calvert Cliffs 3 Nuclear Project, LLC} record retention requirements.

2.2.12 Audit Generation⁴

{Calvert Cliffs 3 Nuclear Project, LLC} security architecture provides the following:

- Audit record generation capability for the auditable events on CDAs,
- Audit record generation capability and the capability for authorized users to select which auditable events are to be audited by specific components of CDAs,
- Audit records for the selected list of auditable events on CDAs, and
- The capability to compile audit records from multiple components within CDAs into a site wide (logical or physical) audit trail that is time correlated to within {Calvert Cliffs 3 Nuclear Project, LLC} defined level of tolerance for the relationship between time stamps of individual records in the audit trail.

2.3 Critical Digital Asset and Communications Protection

2.3.1 Critical Digital Asset and Communications Protection Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} developed, disseminated, and {annually} reviews and updates the following:

- A formal, documented CDA system and communications protection policy that addresses the purpose, scope, roles, responsibilities, management commitments, and internal coordination of the system, and
- Formal, documented procedures that facilitate the implementation of the CDA system and communications protection policy and associated CDA system and communications protection security controls.

2.3.2 Application Partitioning and Security Function Isolation⁵

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Configuring CDAs to separate applications into user functionality (including user interface services) and CDA management functionality,
- Configuring CDAs to isolate security functions from nonsecurity functions, which is accomplished through {partitions, domains, etc.}, including control of access to and integrity of the hardware, software, and firmware that perform these security functions,
- Configuring CDAs to employ underlying hardware separation mechanisms to facilitate security function isolation,
- Configuring CDAs to isolate critical security functions (i.e., functions enforcing access and information flow control) from both nonsecurity functions and other security functions,
- Configuring CDAs to minimize the number of nonsecurity functions included within the isolation boundary containing security functions,
- Configuring CDA security functions as independent modules that avoid unnecessary interactions between modules,

⁴ {Audit generation is only being applied to certain CDAs and CS; not the entire group comprising the architecture.}

⁵ {Each bullet will be treated as a separate, independent control and applied where applicable.}

- Configuring CDA security functions as a layered structure minimizing interactions between levels of the design and avoiding any dependence by lower levels on the functionality or correctness of higher levels, and
- Implementing alternative controls and documenting the justification for alternative controls or countermeasures for situations in which a CDA cannot support security function isolation and taking all of the following actions:
 - Physically restrict access to the CDA,
 - Monitor and record physical access to the CDA to detect and respond to intrusions in a timely manner,
 - Use auditing/validation measures (e.g., security guard rounds, periodic monitoring of tamper seals) to detect unauthorized access and modifications to the CDAs,
 - Ensure that individuals who have access to the CDAs are qualified, and
 - Ensure that those individuals are trustworthy and reliable in accordance with 10 CFR 73.56.

2.3.3 Shared Resources

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Configuring CDAs to prevent unauthorized and unintended information transfer via shared system resources, and
- Using physically separate network devices to create and maintain logical separation of Levels 3 and 4 from each other and from all other levels.

2.3.4 Denial of Service Protection⁶

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Configuring CDAs to protect against or limit the effects of denial of service attacks,
- Configuring CDAs to restrict the ability of users to launch denial of service attacks against other CDAs or networks, and
- Configuring CDAs to manage excess capacity, bandwidth, or other redundancy to limit the effects of information-flooding and saturation types of denial-of-service attacks.

2.3.5 Resource Priority

{Calvert Cliffs 3 Nuclear Project, LLC} configures CDAs to limit the use of resources by priority by preventing lower priority processes from delaying or interfering with the servicing of any higher priority process.

2.3.6 Transmission Integrity⁷

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Configuring CDAs to protect the integrity of transmitted information,
- Employing cryptographic mechanisms to recognize changes to information during transmission and upon receipt, unless otherwise protected by alternative physical measures,
- Implementing mechanisms to prevent "man-in-the-middle" (MITM) attacks via the following methods:
 - Media Access Control Address Locking—{Calvert Cliffs 3 Nuclear Project, LLC} locks devices and ports via address locking to prevent MITM attacks and rogue devices from being added to the network,
 - Network Access Control—{Calvert Cliffs 3 Nuclear Project, LLC} implements network access control to prevent MITM attacks and rogue devices from being added to the network,
- Implementing monitoring to detect MITM and address resolution protocol poisoning, and

⁶ {Each bullet will be treated as a separate, independent control and applied where applicable.}

⁷ {Each bullet will be treated as a separate, independent control and applied where applicable.}

- Implementing alternative controls and documenting the justification for alternative controls or countermeasures for situations in which a CDA cannot support transmission integrity and implements all of the following:
 - Physically restricts access to the CDA,
 - Monitors and records physical access to the CDA to detect and respond to intrusions in a timely manner,
 - Uses auditing/validation measures (e.g., security guard rounds, periodic monitoring of tamper seals) to detect unauthorized access and modifications to the CDAs,
 - Ensures that individuals who have access to the CDA are qualified, and
 - Ensures that those individuals are trustworthy and reliable in accordance with 10 CFR 73.56.

2.3.7 Transmission Confidentiality

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Configuring the CDAs to protect the confidentiality of transmitted information,
- Employing cryptographic mechanisms to prevent unauthorized disclosure of information during transmission and receipt unless otherwise protected by alternative physical measures, and
- Implementing alternative controls and documenting the justification for alternative controls or countermeasures for situations in which a CDA cannot internally support transmission confidentiality capabilities, including virtual private networks, or implements all of the following:
 - Physically restricts access to the CDA,
 - Monitors and records physical access to the CDA to detect and respond to intrusions in a timely manner,
 - Uses auditing/validation measures (e.g., security guard rounds, periodic monitoring of tamper seals) to detect unauthorized access and modifications to the CDAs,
 - Ensures that individuals who have access to the CDA are qualified, and
 - Ensures that those individuals are trustworthy and reliable in accordance with 10 CFR 73.56.

2.3.8 Trusted Path

{Calvert Cliffs 3 Nuclear Project, LLC} configures CDAs to use trusted communication paths between the user and the security functions of the CDAs, which includes authentication and reauthentication, at a minimum.

2.3.9 Cryptographic Key Establishment and Management

{Calvert Cliffs 3 Nuclear Project, LLC} manages cryptographic keys using automated mechanisms with supporting procedures or manual procedures when cryptography is required and employed within the CDAs in accordance with {Federal Information Processing Standards (FIPS) 140-2 Security Requirements for Cryptographic Modules}.

2.3.10 Use of Cryptography

{Calvert Cliffs 3 Nuclear Project, LLC} configures CDAs to implement cryptographic mechanisms that comply with {Federal Information Processing Standards (FIPS) 140-2 Security Requirements for Cryptographic Modules}.

2.3.11 Unauthorized Remote Activation of Services

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Configuring CDAs to prohibit remote activation of collaborative computing mechanisms and providing an explicit indication of use to the local user, and
- Configuring CDAs to provide physical disconnection of cameras and microphones in a manner that supports ease of use, except when these technologies are used to control and monitor the CDA for security purposes.

2.3.12 Transmission of Security Parameters

{Calvert Cliffs 3 Nuclear Project, LLC} configures CDAs to associate security parameters with information exchanged between CDAs.

2.3.13 Public Key Infrastructure Certificates

{Calvert Cliffs 3 Nuclear Project, LLC} issues public key certificates under a certificate policy or obtains public key certificates under a certificate policy from a provider approved by {Calvert Cliffs 3 Nuclear Project, LLC}.

2.3.14 Mobile Code

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Establishing usage restrictions and implementation guidance for mobile code technologies based on their potential to cause damage to CDAs if used maliciously, and
- Authorizing, monitoring, and controlling the use of mobile code within the CDAs.

2.3.15 Secure Name/Address Resolution Service (Authoritative/Trusted Source)

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Configuring systems that provide name/address resolution to supply additional data origin and integrity artifacts along with the authoritative data returned in response to resolution queries, and
- Configuring systems that provide name/address resolution to CDAs, when operating as part of a distributed, hierarchical namespace, to provide the means to indicate the security status of child subspaces and, if the child supports secure resolution services, enabled verification of a chain of trust among parent and child domains.

2.3.16 Secure Name/Address Resolution Service (Recursive or Caching Resolver)

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Configuring the systems that serve name/address resolution service for CDAs to perform data origin authentication and data integrity verification on the resolution response they receive from authoritative sources, and
- Configuring CDAs so that, upon receipt of data, they perform data origin authentication and data integrity verification on resolution responses whether or not the CDAs explicitly request this service.

2.3.17 Architecture and Provisioning for Name/Address Resolution Service

{Calvert Cliffs 3 Nuclear Project, LLC} configures the systems that collectively provide name/address resolution service for a logical organization to be fault tolerant and segregate services (i.e., implement role separation).

2.3.18 Session Authenticity

{Calvert Cliffs 3 Nuclear Project, LLC} configures CDAs to provide mechanisms to protect the authenticity of communications sessions.

2.3.19 Thin Nodes

{Calvert Cliffs 3 Nuclear Project, LLC} configures CDAs and consoles to employ processing components that have minimal functionality and data storage.

2.3.20 Confidentiality of Information at Rest

{Calvert Cliffs 3 Nuclear Project, LLC} configures CDAs to protect the confidentiality of information at rest.

2.3.21 Heterogeneity/Diversity⁸

{Calvert Cliffs 3 Nuclear Project, LLC} employs diverse technologies in the implementation of CDAs.

⁸ {Heterogeneity will be deployed in the acquisition of all CDAs where possible and applicable.}

2.3.22 Fail in Known State

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- CDAs fail in a known-state to ensure that SSEP functions are not adversely impacted by the CDAs failure, and
- To prevent a loss of confidentiality, integrity, or availability in the event of a failure of the CDA or a component of the CDA.

2.4 Identification and Authentication

2.4.1 Identification and Authentication Policies and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} developed, disseminated, and {annually} reviews and updates the following:

- A formal, documented identification and authentication policy, which addresses purpose, scope, roles, responsibilities, management commitments, and internal coordination, to positively identify potential network users, hosts, applications, services, and resources using a combination of identification factors or credentials, and
- Formal, documented procedures that facilitate the implementation of the identification and authentication policy and associated identification and authentication controls.

The identification and authentication policy and procedures provide guidance on managing both user identifiers and CDA authenticators. These items include the following:

- Uniquely identifying each user, and processes acting on behalf of a user,
- Verifying the identity of each user, and processes acting on behalf of a user,
- Receiving authorization to issue a user identifier from an appropriate authorized representative,
- Ensuring that the user identifier is issued to the intended party,
- Disabling user identifier after a maximum of {30 days} of inactivity,
- Disabling user identifier immediately upon termination of users need for access,
- Archiving user identifiers,
- Defining initial authenticator content,
- Establishing administrative procedures for initial authenticator distribution; lost, compromised, or damaged authenticators; and revoking authenticators,
- Changing default authenticators upon control system installation, and
- Changing/refreshing authenticators {annually}.

2.4.2 User Identification and Authentication⁹

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Implementing identification and authentication technology to uniquely identify and authenticate individuals and processes acting on behalf of users interacting with CDA and ensuring that CDAs, security boundary devices, physical controls of the operating environment, and individuals interacting with CDAs, are uniquely identified and authenticated and that all processes acting on behalf of users are equally authenticated and identified,
- Ensuring that the authentication technology employs strong multifactor authentication using protected processing levels,

⁹ {Each bullet will be treated as a separate, independent control and applied where applicable.}

- Implementing alternative controls and documenting the justification for alternative controls or countermeasures for situations in which a CDA cannot support user identification and authentication and implementing all of the following:
 - Physically restricting access to the CDA,
 - Monitoring and recording physical access to the CDA to detect and respond to intrusions in a timely manner,
 - Using auditing/validation measures (e.g., security guard rounds, periodic monitoring of tamper seals) to detect unauthorized access and modifications to the CDAs,
 - Ensuring that individuals who have access to the CDA are qualified, and
 - Ensuring that those individuals are trustworthy and reliable in accordance with 10 CFR 73.56,
- Implementing secure domain-based authentication, as well as the following:
 - Maintaining domain controllers within the given security level they are meant to service,
 - Physically and logically securing domain controllers to prevent unauthorized access and manipulation,
 - Prohibiting domain trust relationships between domains that exist at different security levels,
 - Prohibiting domain authentication protocols from being passed between boundaries, and
 - Implementing role-based access control where possible to restrict user privileges to only those required to perform the task, and
- Where domain-based authentication is not used, {Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:
 - Documenting and justifying the reason for not implementing secure domain-based authentication,
 - Implementing localized authentication when feasible,
 - Implementing the strongest possible challenge-response authentication mechanism within a scenario, as supported by the application, and
 - Implementing role-based access control where possible to restrict user privileges to only those required to perform the task.

2.4.3 Password Requirements¹⁰

{Calvert Cliffs 3 Nuclear Project, LLC} ensures that, where used, passwords meet the following requirements:

- The length, strength, and complexity of passwords balance security and operational ease of access within the capabilities of the CDA.
- Passwords have length and complexity commensurate with the required security.
- Passwords are changed every {describe the periods for each class of system, for example 30 days for workstations, 3 months for CDAs in the vital area, etc. 90 days}.
- Passwords cannot be found in a dictionary and do not contain predictable sequences of numbers or letters.
- Copies of master passwords are stored in a secure location with limited access.
- Authority to change master passwords is limited to authorized personnel.

2.4.4 Nonauthenticated Human Machine Interaction Security

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Ensuring that, for those situations in which a human machine interaction (HMI) for a CDA cannot support authentication because of operational requirements, adequate physical security controls exist that require that

¹⁰ {Each bullet will be treated as a separate, independent control and applied where applicable.}

operators are both authorized and properly identified and are monitored so that operator actions are audited and recorded,

- Controlling access to nonauthenticated human machine interactions (NHMI) so as to not hamper HMI while maintaining security of the NHMI and ensuring that access to the NHMI is limited to only authorized personnel,
- Verifying that SSEP functions are not adversely affected by authentication, session lock, or session termination controls, and
- Implementing auditing capability on NHMIs to ensure that all operator activity is recorded and monitored by authorized and qualified personnel and maintaining historical records to provide for auditing requirements.

2.4.5 Device Identification and Authentication

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Implementing and documenting technology that identifies and authenticates devices (i.e., tester) before those devices establish connections to CDAs, and
- Implementing alternative controls and documenting the justification for alternative controls or countermeasures for situations in which a CDA cannot support device identification and authentication (e.g., serial devices) and implementing all of the following:
 - Physically restricting access to the CDA,
 - Monitoring and recording physical access to the CDA to detect and respond to intrusions in a timely manner,
 - Using auditing/validation measures (e.g., security guard rounds, periodic monitoring of tamper seals) to detect unauthorized access and modifications to the CDA,
 - Ensuring that individuals who have access to the CDA are qualified, and
 - Ensuring that those individuals are trustworthy and reliable in accordance with 10 CFR 73.56.

2.4.6 Identifier Management

{Calvert Cliffs 3 Nuclear Project, LLC} manages and documents user identifiers by performing all of the following:

- Uniquely identifying each user,
- Verifying the identity of each user,
- Receiving authorization to issue a user identifier from an organization official,
- Issuing the user identifier to the intended party,
- Disabling the user identifier after a maximum of {30 days} of inactivity, and
- Archiving user identifiers consistent with records retention for the access authorization program.

2.4.7 Authenticator Management

{Calvert Cliffs 3 Nuclear Project, LLC} manages CDA authenticators by performing all of the following:

- Defining initial authenticator content, such as defining password length and composition, tokens, keys, and other means of authenticating,
- Establishing administrative procedures for initial authenticator distribution; lost, compromised, or damaged authenticators; and revoking authenticators,
- Changing default authenticators upon CDA installation, and
- Changing/refreshing authenticators {annually}.

2.4.8 Authenticator Feedback

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Ensuring that CDAs obscure feedback of authentication information during the authentication process to protect the information from possible exploitation or use by unauthorized individuals, and
- Ensuring that CDAs and feedback from CDA do not provide information that would allow an unauthorized user to compromise the authentication mechanism.

2.4.9 Cryptographic Module Authentication

{Calvert Cliffs 3 Nuclear Project, LLC} ensures that CDAs authenticate cryptographic modules in accordance with {Federal Information Processing Standards (FIPS) 140-2 Security Requirements for Cryptographic Modules}.

2.5 System Hardening

2.5.1 Removal of Unnecessary Services and Programs¹¹

{Calvert Cliffs 3 Nuclear Project, LLC} documents all required applications, utilities, system services, scripts, configuration files, databases, and other software and the appropriate configurations, including revisions or patch levels, for each of the computer systems associated with the CDAs.

{Calvert Cliffs 3 Nuclear Project, LLC} maintains a list of services required for CDAs. The listing includes all necessary ports and services required for normal and emergency operations. The listing also includes an explanation or cross reference to justify why each service is necessary for operation. Only those services and programs that are necessary for operation are allowed.

{Calvert Cliffs 3 Nuclear Project, LLC} verifies and documents that all CDAs are patched or mitigated in accordance with the Flaw Remediation security controls in C 3.2.

{Calvert Cliffs 3 Nuclear Project, LLC} documents the remediation period appropriate for software and service updates or workarounds to mitigate all vulnerabilities associated with the product and to maintain the established level of security.

{Calvert Cliffs 3 Nuclear Project, LLC} documents the operating system and software patches as CDAs evolve to allow traceability and verifies that no extra services are reinstalled or reactivated.

{Calvert Cliffs 3 Nuclear Project, LLC} removes or disables software components that are not required for the operation and maintenance of the CDA before incorporating the CDA into the production environment.

{Calvert Cliffs 3 Nuclear Project, LLC} documents components that were removed or disabled. The software removed or disabled includes, but is not limited to the following:

- Device drivers for network devices not delivered,
- Device drivers for unused peripherals,
- Messaging services (e.g., MSN, AOL IM),
- Servers or clients for unused services,
- Software compilers in all user workstations and servers except for development workstations and servers,
- Software compilers for languages that are not used in the control system,
- Unused networking and communications protocols,
- Unused administrative utilities, diagnostics, network management, and system management functions,
- Backups of files, databases, and programs used only during system development,
- All unused data and configuration files,

¹¹ {Each bullet will be treated as a separate, independent control and applied where applicable.}

- Sample programs and scripts,
- Unused document processing utilities (e.g., Microsoft Word, Excel, Power Point, Adobe Acrobat, OpenOffice),
- Unused removable media support, and
- Games.

2.5.2 Host Intrusion Detection System

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents the following requirements:

- Configure the host intrusion detection system (HIDS) to include attributes, such as static file names, dynamic file name patterns, system and user accounts, execution of unauthorized code, host utilization, and process permissions, to enable the system to detect cyber attacks up to and including the DBT.
- Configure HIDS to log system and user account connections in such a way that the user or security personnel are alerted if an abnormal situation occurs.
- Configure the HIDS in a manner that does not adversely impact the CDA safety, security, and emergency preparedness functions.
- Configure security logging storage devices as "append only" to prevent alteration of records on those storage devices.
- Perform rules updates and patches to the HIDS as security issues are identified to maintain the established level of system security.

{Calvert Cliffs 3 Nuclear Project, LLC} secures HIDS configuration documents to ensure that only authorized personnel may access them.

2.5.3 Changes to File System and Operating System Permissions

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents the following requirements:

- Configure CDAs with the lowest privilege, data, commands, file, and account access.
- Configure the system services to execute at the lowest privilege level possible for that service and document the configuration.
- Document the changing or disabling of access to files and functions.
- Validate that baseline permission and security settings are not altered after modifications or upgrades.

2.5.4 Hardware Configuration¹²

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents the following requirements:

- Disable, through software or physical disconnection, unneeded networks, wireless and communication ports and removable media drives or provided engineered barriers.
- Password protect the BIOS from unauthorized changes.
- Document mitigation measures in cases for which password protection of the BIOS is not technically feasible.
- Document the hardware configuration.
- Use network devices to limit access to and from specific locations, where appropriate.
- Allow system administrators the ability to reenabling devices if the devices are disabled by software and document the configuration.
- Verify that replacement devices are configured in a manner that is equal to or better than the original.

¹² {Each bullet will be treated as a separate, independent control and applied where applicable.}

2.5.5 Installing Operating Systems, Applications, and Third-Party Software Updates¹³

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents the following:

- The patch management program, update process, and individuals responsible for installation,
- Notification of vulnerabilities affecting CDAs to be conducted {within 4 hours of receipt of the vulnerability information},
- Notification to authorized personnel of patches affecting cyber security,
- The authorization of updates or workarounds to the baseline before implementation,
- The patch management process for the CDA after installation, including policies, procedures, and programs relating to mitigation strategies for instances in which the vendor of the CDA informs {Calvert Cliffs 3 Nuclear Project, LLC} not to apply released patches, and
- The level of support for testing patch releases.

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and tests the following:¹⁴

- Received cyber security updates on a nonproduction system/device for testing and validation before installing on production systems, and
- All updates for security impact.

{Calvert Cliffs 3 Nuclear Project, LLC} ensures that the nonproduction system/device accurately replicate the production CDA.

¹³ {Each bullet will be treated as a separate, independent control and applied where applicable.}

¹⁴ {No updates to production systems will occur without prior testing and validation. The testing and validation will be in accordance with the Calvert Cliffs Nuclear Project, LLC's policies and procedures.}

3 : OPERATIONAL AND MANAGEMENT SECURITY CONTROLS

Operational Controls

3.1 Media Protection

3.1.1 Media Protection Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} developed, disseminated, and {annually} reviews and updates the following:

- A formal, documented media protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among {Calvert Cliffs 3 Nuclear Project, LLC} entities, and compliance for each information category, as defined by the site policies, and ensures that any media which can provide information to assist an adversary is marked at a minimum to identify the sensitive nature of the media, and
- A formal, documented procedure to facilitate the implementation of the media protection policy and all associated media protection controls, including the methodology that defines the purpose, scope, roles, responsibilities, and management commitments in the areas of media receipt, storage, handling, sanitization, removal, reuse, and disposal necessary to provide high assurance that the risk of unauthorized disclosure of information that could be used in a cyber attack to adversely impact the "safety, security, and emergency preparedness" (SSEP) functions of the nuclear facility is prevented.

3.1.2 Media Access

{Calvert Cliffs 3 Nuclear Project, LLC} documents and restricts access to "critical digital asset" (CDA) media to authorized individuals only. CDA media includes both digital media (e.g., diskettes, magnetic tapes, external or removable hard drives, flash/thumb drives, compact disks, and digital video disks) and nondigital media (e.g., paper, microfilm).

{Calvert Cliffs 3 Nuclear Project, LLC} restricts access to any security information on mobile computing and communications devices with information storage capability (e.g., notebook computers, personal digital assistants, cellular telephones) to authorized individuals only.

{Calvert Cliffs 3 Nuclear Project, LLC} employs automated mechanisms to restrict access to media storage areas and audits access attempts and accesses granted.

3.1.3 Media Labeling/Marking

{Calvert Cliffs 3 Nuclear Project, LLC} marks removable CDA media and CDA output according to information categories indicating the distribution limitations and handling caveats. Output on external media, including video display devices, is marked in accordance with the identified set of special dissemination, handling, or distribution instructions that apply to system output using human readable, standard naming conventions for media labels.

3.1.4 Media Storage

{Calvert Cliffs 3 Nuclear Project, LLC} physically protects and securely stores CDA media to a level commensurate with the sensitivity of the data.

3.1.5 Media Transport

{Calvert Cliffs 3 Nuclear Project, LLC} physically protects and stores CDA media in transport in a manner commensurate with the sensitivity of the data.

{Calvert Cliffs 3 Nuclear Project, LLC} protects and controls CDA media during transport outside of controlled areas and restricts the activities associated with transport of such media to authorized personnel only.

{Calvert Cliffs 3 Nuclear Project, LLC} protects digital and nondigital media during transport outside of controlled areas using {Calvert Cliffs 3 Nuclear Project, LLC}-defined security measures (e.g., locked containers, transport by security officer, cryptography).

{Calvert Cliffs 3 Nuclear Project, LLC} documents activities associated with the transport of CDA media using {Calvert Cliffs 3 Nuclear Project, LLC}-defined system of records.

{Calvert Cliffs 3 Nuclear Project, LLC} uses an identified custodian at all times during transport of CDA media.

3.1.6 Media Sanitation and Disposal

{Calvert Cliffs 3 Nuclear Project, LLC} sanitizes CDA media, both digital and nondigital, before disposal or release for reuse. {Calvert Cliffs 3 Nuclear Project, LLC} {follows the guidance in NIST SP 800-88} to sanitize CDA media. The information is destroyed by a method that precludes reconstruction by means available to the DBT adversaries.

{Calvert Cliffs 3 Nuclear Project, LLC} identifies CDA media requiring sanitization and the appropriate techniques and procedures to be used in the process; sanitizes identified CDA media, both paper and digital, before disposal or release for reuse; and implements this control so that media sanitization is consistent. {Calvert Cliffs 3 Nuclear Project, LLC} tracks, documents, and verifies media sanitization and disposal actions and performs {quarterly} tests on sanitized data to ensure that equipment and procedures are functioning properly.

3.2 Personnel Security

3.2.1 Personnel Security Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC}'s reviewing official grants unescorted access authorization to those individuals who have access, extensive knowledge, or administrative control of CDAs or communication systems that can adversely impact CDAs or safety, security, and emergency preparedness functions before they gain access to those systems, in accordance with Title 10 of the *Code of Federal Regulations* (10 CFR) 73.56, "Personnel Access Authorization Requirements for Nuclear Power Plants."

3.2.2 Personnel Termination or Transfer

{Calvert Cliffs 3 Nuclear Project, LLC}, upon termination or transfer of an individual's employment, follows the access authorization program established under 10 CFR 73.56 and promptly performs the following actions:

- Terminates all CDA and system access,
- Conducts exit interviews,
- Informs appropriate personnel of status change or termination,
- Retrieves all security-related organizational property, and
- Retains access to organizational information and CDAs formerly controlled by terminated individual.

3.3 System and Information Integrity

3.3.1 System and Information Integrity Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} developed, disseminated, and {annually} reviews and updates the following:

- A formal, documented system and information integrity policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among {Calvert Cliffs 3 Nuclear Project, LLC} entities, and compliance, and
- Formal, documented procedures to facilitate the implementation of CDAs and an information integrity policy and associated system and information integrity controls.

{Calvert Cliffs 3 Nuclear Project, LLC}'s system and information integrity procedures contain the following attributes:

- Detects malicious or suspicious access control or networking anomalies occurring at established defensive level boundaries and within security levels,
- Alerts appropriate staff to the detected malicious or suspicious activity using a secure communications mechanism that is protected from the network being monitored,
- Isolates and contains malicious activity,
- Neutralizes malicious activity,
- Centralizes logging of cyber security events to support correlations,
- Provides for secure monitoring and management of security mechanisms,
- Provides time synchronization for all security-related devices, and
- Provides high assurance that the physical and logical security of the monitoring network (or systems/CDAs) matches or exceeds, and differs from, the systems/CDAs or networks being monitored.

3.3.2 Flaw Remediation

{Calvert Cliffs 3 Nuclear Project, LLC} established, implemented, and documented procedures for the following purposes:

- Identifying the security alerts and vulnerability assessment process,
- Communicating vulnerability information,
- Correcting the flaw expeditiously utilizing the configuration management process,
- Correcting security flaws in CDAs, and
- Performing vulnerability scans and assessments of the CDA to validate that the flaw has been eliminated before the CDA is put into production.

Before implementing corrections, {Calvert Cliffs 3 Nuclear Project, LLC} documents and tests software updates related to flaw remediation to determine the effectiveness and potential side effects on CDAs. The {Calvert Cliffs 3 Nuclear Project, LLC} captures flaw remediation information in its Corrective Action Program.

3.3.3 Malicious Code Protection¹⁵

{Calvert Cliffs 3 Nuclear Project, LLC} established, deployed, and documents real-time malicious code protection mechanisms at security boundary device entry and exit points, CDAs (if applicable), workstations, servers, and mobile computing devices (i.e., calibrators) on the network to detect and eradicate malicious code resulting from the following:

- Data communication between systems, CDAs, removable media, or other common means, and
- Exploitation of CDA vulnerabilities.

{Calvert Cliffs 3 Nuclear Project, LLC} documents and updates malicious code protection mechanisms (including signature definitions) whenever new releases are available in accordance with the {Calvert Cliffs 3 Nuclear Project, LLC}'s configuration management policy and procedures.

{Calvert Cliffs 3 Nuclear Project, LLC} documents and configures malicious code protection mechanisms to ensure the following:

- Scans are performed of security boundary devices, CDAs (if applicable), workstations, servers, and mobile computing devices weekly and real-time scans of files from external sources are performed as the files are downloaded, opened, or executed.
- Infected files are disinfected and quarantined.

¹⁵ {Malicious Code Protection will be deployed on all systems where possible and applicable. }

{Calvert Cliffs 3 Nuclear Project, LLC} documents and employs malicious code protection software products from multiple vendors as part of a defense-in-depth strategy and addresses the receipt of false positives during malicious code detection and eradication and the resulting potential impact on the availability of the CDA.

{Calvert Cliffs 3 Nuclear Project, LLC} centrally manages malicious code protection mechanisms to achieve the following:

- The CDAs prevent users from circumventing malicious code protection capabilities.
- The CDAs update malicious code protection mechanisms only when directed by a privileged user.

{Calvert Cliffs 3 Nuclear Project, LLC} does not allow users to introduce unauthorized removable media into the CDAs.

{Calvert Cliffs 3 Nuclear Project, LLC} disables all media interfaces (e.g., USB ports) that are not required for the operation of the CDA.

{Calvert Cliffs 3 Nuclear Project, LLC} documents and implements malicious code protection mechanisms to identify data containing malicious code and responds accordingly when CDAs encounter data not explicitly allowed by the security policy.

3.3.4 Monitoring Tools and Techniques

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Monitoring events on the CDAs,
- Detecting CDAs attacks,
- Detecting and blocking unauthorized connections,
- Retaining event logs in accordance with information retention requirements,
- Identifying unauthorized use of the CDAs, and
- Monitoring devices that are deployed to provide visibility across CDAs for the following capabilities:
 - To collect information to detect attacks, unauthorized behavior and access, and authorized access, and
 - To track specific types of transactions of interest to {Calvert Cliffs 3 Nuclear Project, LLC}.

{Calvert Cliffs 3 Nuclear Project, LLC} heightens the level of monitoring activity whenever {Calvert Cliffs 3 Nuclear Project, LLC} or the U.S. Nuclear Regulatory Commission (NRC) determines that there is an indication of increased risk to the safety, security, or emergency operations of the site.

{Calvert Cliffs 3 Nuclear Project, LLC} documents, interconnects, and configures individual intrusion detection tools into a plantwide intrusion detection system using common protocols.

{Calvert Cliffs 3 Nuclear Project, LLC} tests cyber intrusion detection and prevention systems consistent with the timeframe defined in Nuclear Energy Institute (NEI) 03-12, Section 20.1, for intrusion detection systems, and before being placed back in service after each repair or inoperative state.

{Calvert Cliffs 3 Nuclear Project, LLC} documents and employs automated tools to support near-real-time analysis of events.

{Calvert Cliffs 3 Nuclear Project, LLC} documents and employs automated tools to integrate intrusion detection tools into access control and flow control mechanisms for rapid response to attacks by enabling reconfiguration of these mechanisms in support of attack isolation and elimination.

{Calvert Cliffs 3 Nuclear Project, LLC} monitors, logs, and documents inbound and outbound communications for unusual or unauthorized activities or conditions. Monitoring capabilities provide real-time alerts when indications of compromise or potential compromise occur.

{Calvert Cliffs 3 Nuclear Project, LLC} prevents users from circumventing intrusion detection and prevention capabilities.

{Calvert Cliffs 3 Nuclear Project, LLC} notifies and documents incident response personnel of suspicious events and takes the least-disruptive actions to SSEP functions to investigate and terminate suspicious events.

{Calvert Cliffs 3 Nuclear Project, LLC} documents and protects information obtained from intrusion monitoring tools from unauthorized access, modification, and deletion.

{Calvert Cliffs 3 Nuclear Project, LLC} uses competent cyber security personnel to randomly test and document intrusion monitoring tools.

{Calvert Cliffs 3 Nuclear Project, LLC} documents and makes provisions to ensure that encrypted traffic is visible to monitoring tools.

{Calvert Cliffs 3 Nuclear Project, LLC} analyzes and documents outbound communications traffic at the external boundary of CDAs (i.e., system perimeter) and, at selected interior points within the CDAs infrastructure to discover anomalies.

{Calvert Cliffs 3 Nuclear Project, LLC} ensures and documents that the use of monitoring tools and techniques does not adversely impact the functional performance of CDAs and that, where monitoring tools and techniques cannot be used, adequate alternate controls are in place to compensate.

3.3.5 Security Alerts and Advisories

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Receiving timely security alerts, bulletins, advisories, and directives from credible external organizations as designated by the NRC and the {Calvert Cliffs 3 Nuclear Project, LLC} on an ongoing basis, such as third-party security alert notification services and vendor security alert lists, and maintaining a copy of these documents,
- Independently evaluating and determining the need, severity, methods, and timeframes for implementing security directives consistent with the security controls for the CDA (Section 1.3.1 of this plan), and
- Within established timeframes set by the licensee or as directed by the NRC, {Calvert Cliffs 3 Nuclear Project, LLC}:
 - Generates and documents internal security alerts, advisories, and directives as necessary,
 - Disseminates and documents security alerts, advisories, and directives to designated personnel for action and tracks their status and completion,
 - Implements and documents security directives in accordance with established timeframes or implements an alternate security measure,
 - Implements and documents any required mitigation measures in accordance with the {configuration management process}, and
 - Employs automated or other mechanisms (e.g., e-mail lists) to make security alert and advisory information available to {CCNPP Unit 3}, as needed.

3.3.6 Security Functionality Verification

{Calvert Cliffs 3 Nuclear Project, LLC} verifies and documents the correct operation of security functions of CDAs. This occurs, where possible, upon startup and restart, upon command by a user with appropriate privilege, {weekly}, and when anomalies are discovered.

When technically feasible, CDAs provide notification of failed security tests and {Calvert Cliffs 3 Nuclear Project, LLC} documents these cases.

If technically feasible, CDAs provide automated support for the management of distributed security testing and {Calvert Cliffs 3 Nuclear Project, LLC} documents the results of this testing.

{Calvert Cliffs 3 Nuclear Project, LLC} documents the justification for employing alternative (compensating) controls for those situations in which a CDA cannot support the use of automated mechanisms for the management of distributed security testing. Nonautomated mechanisms and procedures to test security functions include the use of the following:

- Qualified individuals,
- Trustworthy and reliable individuals in accordance with 10 CFR 73.56,

- Test procedures and results,
- Physically restricted access to the CDA,
- Monitored and recorded physical access to the CDA (for timely detection and response to intrusions), and
- Auditing and validation measures (e.g., security officer rounds, periodic monitoring of tamper seals).

3.3.7 Software and Information Integrity

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Detecting and documenting unauthorized changes to software and information,
- Employing hardware access controls (e.g., hardwired switches), where technically feasible, to prevent unauthorized software changes,
- Reassessing and documenting the integrity, operation, and functions of software and information by performing regular integrity, operation, and functional scans consistent with manufacturer or vendor recommendations, {quarterly} or as defined in NEI 03-12 or as required by NRC regulation, whichever is more frequent,
- Employing and documenting automated tools, where technically feasible, that provide notification to designated individuals upon discovering discrepancies during integrity verification,
- Employing and documenting centrally managed integrity verification tools,
- Requiring the use of physical tamper evident packaging or seals for system components,
- Requiring, when tamper evident packaging is used, that seals be inspected on a regular basis, and
- Ensuring and documenting that the use of integrity verification applications does not adversely impact the operational performance of the CDA and applying alternate controls when integrity verification applications cannot be used.

3.3.8 Information Input Restrictions

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for ensuring the following:

- The capability to input information to CDAs is restricted to only authorized sources.
- Information is checked automatically for accuracy, completeness, validity, and authenticity as close to the point of origin as possible. Rules for checking the valid syntax of CDA inputs (e.g., character set, length, numerical range, acceptable values) are documented and in place to verify that inputs match specified definitions for format and content. Inputs passed to interpreters are prescreened to prevent the content from being unintentionally interpreted as commands.

3.3.9 Error Handling

{Calvert Cliffs 3 Nuclear Project, LLC} documents and implements controls for CDAs to ensure the following:

- Error conditions are identified.
- Generated error messages provide information necessary for corrective actions without revealing potentially harmful information that could be exploited by adversaries.
- Error messages are revealed only to authorized personnel.
- Inclusion of sensitive information, such as passwords, in error logs or associated administrative messages is prohibited.

3.3.10 Information Output Handling and Retention¹⁶

{Calvert Cliffs 3 Nuclear Project, LLC} retains output from CDAs to ensure that sensitive information is only disclosed to authorized personnel and is handled and disposed of to ensure that output is not disclosed to unauthorized personnel.

3.3.11 Anticipated Failure Response

{Calvert Cliffs 3 Nuclear Project, LLC} protects the availability of CDAs through compliance with technical specifications, preventive maintenance programs, maintenance rule programs, security plans, emergency plans, or the corrective action program. Where these programs do not apply, the availability of CDAs is provided by the following means:

- Substitution of components, when needed, and a mechanism to exchange active and standby roles of the components, and
- Consideration of the mean time to failure for components in specific environments of operation
- Having adequate inventory of essential spare parts.

3.4 Maintenance

3.4.1 System Maintenance Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} developed, disseminated, and {annually} reviews the following:

- A formal, documented CDA maintenance policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among {Calvert Cliffs 3 Nuclear Project, LLC} entities, associated CDA maintenance controls, and compliance,
- Formal, documented procedures to facilitate the implementation of the CDA maintenance policy and associated maintenance controls, and
- The system maintenance policy and procedures which cover assets located in all security boundaries, including the following:
 - Owner-controlled area: the outermost protected area boundary for a plant that is outside the plant's security area,
 - Protected area: an area within the boundaries of a nuclear facility that is encompassed by physical barriers and to which access is controlled (see 10 CFR 73.2, "Definitions"),
 - Vital areas: areas containing any equipment, system, device, or material, the failure, destruction, or release of which could directly or indirectly endanger the public health and safety by exposure to radiation. Vital areas may also contain equipment or systems which would be required to function to protect public health and safety following such failure, destruction, or release, and
 - Public access area: locations outside the physical control of the plant.

3.4.2 Maintenance Tools

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Approving, monitoring, and documenting the use of CDA maintenance tools,
- Inspecting and documenting maintenance tools (e.g., diagnostic and test equipment and mobile devices, such as laptops) carried into a facility by maintenance personnel for obvious improper modifications,
- Checking and documenting all media and mobile devices, such as laptops, containing diagnostic, CDA, and system and test programs or software for malicious code before the media or mobile device is used in or on a CDA,

¹⁶ {Information Output Handling and Retention will be applied to all applicable systems for SUNSI and safeguards information. }

- Controlling, preventing and documenting the unauthorized removal of maintenance equipment by one of the following:
 - Verifying that there is no {Calvert Cliffs 3 Nuclear Project, LLC} information contained on the equipment and validating the integrity of the device before reintroduction into the facility,
 - Sanitizing or destroying the equipment,
 - Retaining the equipment within the facility, and
 - Obtaining approval from an authority explicitly authorizing removal of the equipment from the facility, and
- Employing {automated and/or manual} mechanisms to restrict the use of maintenance tools to authorized personnel only and employing manual mechanisms only when CDAs or support equipment (e.g., laptops) cannot support automated mechanisms.

3.4.3 Personnel Performing Maintenance and Testing Activities

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Maintaining and documenting a current list of authorized maintenance personnel consistent with its access authorization program and insider mitigation program, and
- Implementing and documenting {automated mechanism and/or nonautomated mechanism} to detect unauthorized use or execution of commands by an escorted individual, or designating and documenting {Calvert Cliffs 3 Nuclear Project, LLC} personnel with required access authorization and knowledge necessary to supervise escorted personnel interacting with CDAs.

3.5 Physical and Environmental Protection

3.5.1 Physical and Environmental Protection Policies and Procedures

For those CDAs located outside of the {CCNPP Unit 3} protected area, {Calvert Cliffs 3 Nuclear Project, LLC} developed, implemented, and {annually} reviews and updates the following:

- A formal, documented physical and environmental protection policy that addresses the following:
 - The purpose of the physical security program as it relates to protecting the CDAs,
 - The scope of the physical security program as it applies to the organization's staff and third-party contractors, and
 - The roles, responsibilities, and management accountability structure of the physical security program to ensure compliance with the {Calvert Cliffs 3 Nuclear Project, LLC} security policy and other regulatory commitments, and
- Formal, documented procedures to facilitate the implementation of the physical and environmental protection policy and associated physical and operational environmental protection security controls.

3.5.2 Third Party/Escorted Access

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Screening, enforcing, and documenting security controls for third-party personnel (including service contractors and other organizations providing control system operation and maintenance, development, information technology services, outsourced applications, and network and security management) and monitoring service provider behavior and compliance, and
- Explicitly including personnel security controls in acquisition-related contract and agreement documents.

3.5.3 Physical and Environmental Protection

{Calvert Cliffs 3 Nuclear Project, LLC} secures and documents physical access to CDAs. Physical security controls (e.g., physical, locked, drivers) are employed to limit access to CDAs and to prevent degradation of the

operational environment which could impact the correct performance of CDAs (e.g., temperature, humidity, dust, vibration and electromagnetic or radiofrequency interference).

3.5.4 Physical Access Authorizations

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Developing and maintaining a list of, and issuing authorization credentials (e.g., badges, identification cards, smart cards) to, personnel with authorized access to facilities containing CDAs and security boundary systems, and
- Designating officials within the organization to review and approve the above access lists and authorization credentials, consistent with the access authorization program.

3.5.5 Physical Access Control

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Controlling all physical access points (including designated entry and exit points) to locations where CDAs reside and verifying individual access authorization before granting access to these areas,
- Approving individual access privileges and enforcing physical and logical access restrictions associated with changes to CDAs,
- Controlling logical access through the use of electronic devices and software,
- Generating, retaining, and reviewing records pertaining to access restrictions,
- Ensuring that only qualified and authorized individuals obtain access to CDAs, and
- Controlling physical access to the CDAs independent of the physical access controls for the facility.

3.5.6 Access Control for Transmission Medium

{Calvert Cliffs 3 Nuclear Project, LLC} controls and documents physical access to CDA communication paths.

3.5.7 Access Control for Display Medium

{Calvert Cliffs 3 Nuclear Project, LLC} controls and documents physical access to CDAs that display information that may assist an adversary and prevents unauthorized individuals from observing the display output.

3.5.8 Monitoring Physical Access

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Monitoring and documenting physical access to CDAs and security boundaries to detect and respond to physical security incidents,
- Reviewing physical access logs,
- Coordinating results of reviews and investigations with {Calvert Cliffs 3 Nuclear Project, LLC}'s incident response personnel,
- Monitoring real-time physical intrusion alarms and surveillance equipment,
- Employing automated mechanisms to assess and recognize potential intrusions and initiates appropriate response actions, and
- Providing adequate lighting for access monitoring devices (e.g., cameras).

3.5.9 Visitor Control Access Records

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Controlling and documenting visitor physical access to CDAs by verifying the identity and confirming access authorization of these individuals prior to entry, and

- Escorting visitors and monitoring visitor activity to prevent adverse impact to SSEP functions.

3.6 Defensive Strategy

{Calvert Cliffs 3 Nuclear Project, LLC} implements and documents its defensive strategy that identifies the protective controls associated within each security level.

{Calvert Cliffs 3 Nuclear Project, LLC} implements and documents a defensive model that identifies the logical boundaries for data transfer and associated communication protocols. The model defines the level of connectivity permitted between levels and individual CDAs. The elements of the defensive strategy are incorporated into CDAs. Security controls are applied commensurate with the risk associated to perform the function required to meet design specifications and operational requirements. This approach is used to deter likely methods of attack and provides high assurance of adequate protection. Defense-in-depth strategies use elements of the physical security plan; emergency response plan; and management, operation, and technical controls. Security controls are applied to CDAs to limit data flow from one level to another, thus protecting the CDA from a cyber attack originating from a less secure level. Security controls and defense-in-depth strategies are used to detect, delay, mitigate, and recover from a cyber attack.

The cyber security defensive model is deployed using a network architecture portrayed by a series of increasing defensive levels. The model takes advantage of the physical and administrative security controls implemented by the physical security program. Physical barriers such as locked doors, locked cabinets, or physical location in the {CCNPP Unit 3} protected area or vital area are also used to mitigate risk.

Section 1.3.2 of this plan documents specific information regarding the {Calvert Cliffs 3 Nuclear Project, LLC} defensive strategy.

3.7 Defense-in-Depth

{Calvert Cliffs 3 Nuclear Project, LLC} implements and documents a defensive strategy, as well as the following:

- Allocates the highest degree (i.e., Level 4) of cyber security protection to CDAs that carry out safety, important to safety, and security functions and protects those CDAs from lower defensive levels,
- Prevents remote access to CDAs located in the highest defensive level,
- Prevents spoofing of addresses from one security level to another,
- Only one-way data flow is allowed from Level 4 to Level 3 and from Level 3 to Level 2,
- Initiation of communications from digital assets at lower security levels to digital assets at higher security levels is prohibited,
- Bi-directional (2-way) communication between CDAs in Level 4 is only conducted within a security Level 4,
- Any non-safety system that has bi-directional communication to a safety system is afforded the same level of protection as the safety system,
- Provides intrusion prevention and detection capabilities within and at the boundaries between security levels,
- Ensures for defense-in-depth levels using bi-directional (2 way) communication that data flow from one level to other levels occurs only through a device that enforces the security policy between each level and detects, prevents, delays, mitigates, and recovers from a cyber attack coming from the lower security level, and
- Moves data, software, firmware, and devices from lower levels of security to higher levels of security using a documented validation process or procedure which is trustworthy at or above the trust level of the device on which the data, code, information, or device will be installed or connected with to ensure that the data, software, firmware, or devices are free from known malicious code, Trojan viruses, worms, and other passive attacks.

{Calvert Cliffs 3 Nuclear Project, LLC} implements and documents security boundary control devices between higher security levels and lower security levels that include the following elements:

- Physically and logically secures and hardens CDAs to prevent unauthorized access or manipulation,
- Employs secure management communications and encryption in accordance with Section 2 of this plan,

- Provides logging and alert capabilities,
- Provides intrusion detection and prevention capabilities,
- Detects and prevents malware from moving between boundaries,
- Possesses the ability to perform more than stateful inspection with respect to the protocols used in communication across the boundary, such as through a bastion host or application proxy, and
- Except in the case of data diodes, contains a rule set that at a minimum:
 - Is configured to deny traffic, except that which is explicitly authorized,
 - Provides protocol, source, and destination filtering such as IP addresses, MAC addresses, TCP ports, and UDP ports,
 - Bases blocking on source and destination address pairs, services, and ports where the protocol supports this,
 - Does not permit either incoming or outgoing traffic by default,
 - Is managed either through a direct connection to the firewall from a management device, such as a laptop, or through a dedicated interface connected to a site- centric security network,
 - Does not permit direct communication to the firewall from any of the managed interfaces,
 - Records information relative to accepted and rejected connections, traffic monitoring, analysis, and intrusion detection,
 - Forwards logs to a centralized logging server,
 - Enforces destination authorization and restricts users by allowing them to reach only the CDAs necessary for their function,
 - Records information flow for traffic monitoring, analysis, and intrusion detection,
 - Is deployed and maintained by authorized personnel adequately trained in the technologies used,
 - Documents and designs with minimal connections that permit acquisition and control networks to be severed from corporate networks, should that decision be made, in times of serious cyber incidents or when directed by authorized personnel who are designated to do so,
 - Is evaluated, analyzed, and tested before deployment and routinely upon modification of the rule set and updates to the operational software and firmware required to operate the firewall,
 - Receives time synchronization from a trusted and dedicated source existing on the security network, attached directly to the CDA or via SNTP and a trusted key management process,
 - Synchronizes time with CDAs to provide for event correlation,
 - Is capable of forwarding logging information in a standard format to a secure logging server or uses an external device to provide this logging (as in the case of a data diode),
 - Routinely reviews logs by personnel that are appropriately trained in such analysis to detect malicious or anomalous activity,
 - Is updated {quarterly},
 - Uses only physically and logically secured and hardened computing devices and flow control to prevent unauthorized access or manipulation of data streams,
 - Allows no information of any kind, including handshaking protocols, to be transferred directly from networks, systems, or CDAs existing at a lower security level to networks, systems, or CDAs existing at Level 4, and
 - Employs measures to prevent viruses or other malicious or unwanted programs from propagating information between security levels.

CDAs that provide safety, important-to-safety, security, or control functions are allocated defensive Level 4 protection. CDAs that provide data acquisition functions are allocated at least defensive Level 3 protection. The defensive model defines data transmission.

3.8 Incident Response

Measures necessary to deny, deter, and detect cyber attacks are implemented by {systems, CDAs, and network protective devices} and align with the {Calvert Cliffs 3 Nuclear Project, LLC} defensive strategy.

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents security controls to deny, deter, and detect adverse threats and conditions to CDAs that may be susceptible to cyber attacks. Security controls employed counteract postulated threats. {Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents the methods used to respond to incidents and to escalate cyber security events to the {CC3NP}'s incident response personnel, appropriate law enforcement authorities, or the NRC.

The {Calvert Cliffs 3 Nuclear Project, LLC}'s Corrective Action Program evaluates, tracks, manages, provides corrective action and documents cyber attacks.

{Calvert Cliffs 3 Nuclear Project, LLC} procedures that govern response to cyber events direct timely identification, detection, and response to cyber attacks. When there is a reasonable suspicion of a cyber attack, response instructions direct notification to the {Shift Manager, Site Security Supervisor,} and other emergency response actions.

{Calvert Cliffs 3 Nuclear Project, LLC} procedures direct containment activities. These measures include (but are not limited to) activities necessary for the following:

- Assist operations in conducting an operability determination,
- Isolate the affected CDA with approval by {Shift Manager}, if possible, and
- Verify that surrounding or interconnected CDAs, networks, and support systems are not contaminated, degraded, or compromised.

Eradication activities identify the attack and the compromised pathway. {Calvert Cliffs 3 Nuclear Project, LLC} patches, cleans, reemerges, or replaces the CDA using disaster recovery procedures. {Calvert Cliffs 3 Nuclear Project, LLC} governing procedures direct measures necessary to mitigate the consequences of cyber attacks.

Recovery activities include, but are not limited to, functional recovery tests, security function and requirements tests, restoration to an operational state, verification of operability, and return to active service. Systems, networks, or equipment affected by cyber attacks are restored and returned to operation as directed by {Calvert Cliffs 3 Nuclear Project, LLC} procedures. {Calvert Cliffs 3 Nuclear Project, LLC} conducts post incident analysis in accordance with its Corrective Action Program.

{Calvert Cliffs 3 Nuclear Project, LLC} reports cyber attacks to the NRC as directed by {Calvert Cliffs 3 Nuclear Project, LLC} procedures, in accordance with the requirements of Appendix G, "Reportable Safeguards Events," to 10 CFR Part 73 and as further described in Regulatory Position 3.8.6.

3.8.1 Incident Response Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} developed, disseminated, and {annually} reviews and updates the following:

- A formal, documented incident response policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among {Calvert Cliffs 3 Nuclear Project, LLC} entities, and compliance,
- Formal, documented procedures to facilitate the implementation of the incident response policy and associated incident response controls that establish procedures for the following:
 - Notifying staff and operators,
 - Determining whether unexpected indications or fault conditions could be the result of a cyber attack in progress,

- In the event that the cyber attack was the result of previous activities that have lain dormant within a CDA, using the Corrective Action Program to perform an analysis to identify entry mechanisms and take steps to close down the vulnerability, and
- Establishing a disaster recovery plan that specifically permits rapid recovery from a cyber attack, including system backups which allow rapid reconstruction of the CDA, and
- Recovery plans that are exercised to ensure that they are effective and that personnel are sufficiently familiar with how to employ them in accordance with {disaster recovery plans, business continuity or emergency plans} and those changes made are based on lessons learned from exercises and drills and actual incidents and events.

{Calvert Cliffs 3 Nuclear Project, LLC} includes stakeholders in the development of incident response policies, procedures, and plans, including the following groups:

- Physical security,
- Cyber security team,
- Operations,
- Engineering,
- Information technology,
- Human resources,
- System support vendors,
- Management, and
- Legal.

3.8.2 Incident Response Training

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Training personnel in their incident response roles and responsibilities with respect to the CDAs and providing refresher training {at least annually},
- Incorporating simulated events into incident response training to facilitate effective response by personnel in crisis situations, and
- Documenting incident response training exercises and acknowledgements that personnel are qualified and trained.

3.8.3 Incident Response Testing and Drills

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Testing and conducting drills of the incident response capability for CDAs {at least annually},
- Using {Calvert Cliffs 3 Nuclear Project, LLC}-defined tests or drills or both to update the incident response capability to maintain its effectiveness,
- Documenting the results of testing and drills,
- Providing incident response testing and drills procedures,
- Employing automated mechanisms to thoroughly and effectively test or drill the incident response capability, and
- Performing and documenting announced and unannounced tests and drills.

3.8.4 Incident Handling

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Implementing and documenting an ongoing incident handling capability for security incidents that includes preparation, detection and analysis, containment, eradication, and recovery {rolled into existing incident handling program},
- Incorporating lessons learned from ongoing incident handling activities into incident response procedures and implementing the procedures accordingly,
- Forming an integrated cyber security incident response team (CSIRT),
- In the event of an unplanned incident that reduces the number of required cyber security personnel, compensating, by using other trained and qualified onsite cyber security personnel or calling in off-duty personnel within 2 hours from the time of discovery,
- Providing the team with the technical skills and authority to effectively respond to a potential cyber security event,
- Developing and documenting processes, procedures, and controls that the team will employ upon the discovery or identification of a potential or actual cyber security attack, and
- Documenting and defining response to the following:
 - Identification of what constitutes a cyber security incident,
 - Identification of threat level classification for incidents,
 - Description of actions to be taken for each component of the Incident Response & Recovery (IR&R) process,
 - Description of individual postulated classes or categories of incidents or attacks, as analyzed during attack vector analysis, and indicators and potential or planned methods of mitigation,
 - Identification of defensive strategies that would assist in identifying and containing a cyber attack,
 - Description of the CSIRT incident notification process,
 - Description of incident documentation requirements,
 - Establishment of coordinated and secure communication methods to be used between local and remote CSIRT members and outside agencies, and
 - Description of response escalation requirements.

The {Calvert Cliffs 3 Nuclear Project, LLC} CSIRT consists of individuals with knowledge and experience in the following areas:

- Information and digital system technology—This covers the areas of cyber security, software development and application, computer system administration, and computer networking. In particular, knowledge is required of the digital systems involved in plant operations, including digital instrumentation and control systems, and those involved in plant business systems. In the plant operations area, this includes programmable logic controllers, control systems, and distributed control systems. In the business area, this includes computer systems and databases containing information used to design, operate, and maintain CDAs. In the networking arena, knowledge is required of both plant- and corporate-wide networks. An experienced and highly skilled cyber security staff member might have expertise in all of these areas.
- Nuclear facility operations, engineering, and safety—This includes knowledge of overall facility operations and plant technical specifications. Staff representing this technical area must be able to trace the impact of a vulnerability or series of vulnerabilities in a CDA (or connected digital asset) outward through plant subsystems and systems so that the overall impact on safety, security, and emergency preparedness of the plant can be evaluated.
- Physical and operational security—This includes in-depth knowledge of the plant's physical and operational security program. In addition to the above requirements, specialized in-depth cyber security skills are required to perform the electronic validation testing and optional scanning activities.

- {Calvert Cliffs 3 Nuclear Project, LLC} may not have onsite personnel trained and experienced in all arenas. If this expertise is not available on site, corporate-level cyber security personnel, an independent cyber security organization, or other sources of the necessary validation expertise are considered.

In addition, individuals with the following roles join the CSIRT on an as-needed basis (depending on the incident):

- Site security (physical),
- Senior plant management,
- Corporate public relations, and
- Corporate legal.

Incident data collected includes the following:

- Incident title,
- Date of incident,
- Reliability of report,
- Type of incident (e.g., accident, virus),
- Entry point (e.g., Internet, wireless, modem),
- Perpetrator,
- Type of system, hardware and software impacted,
- Brief description of incident,
- Impact on organization,
- Measures to prevent recurrence, and
- References.

3.8.5 Incident Monitoring

{Calvert Cliffs 3 Nuclear Project, LLC} tracks and documents security incidents on an ongoing basis using automated mechanisms to assist in the tracking of security incidents and in the collection and analysis of incident information.

3.8.6 Incident Reporting

Regulatory Guide (RG) 5.69, "Guidance for the Application of the Radiological Sabotage Design Basis Threat in the Design, Development and Implementation of a Physical Security Protection Program that Meets 10 CFR 73.55 Requirements" (Safeguards Information), provides guidance on the type of cyber attacks and cyber security incidents that are reported to the U.S. Nuclear Regulatory Commission (NRC).

During the process to investigate and recover from a cyber security attack or cyber incident, a review to determine report ability is necessary. Currently, several regulations exist to report emergency and no emergency events to the NRC. Reporting guidance exists but does not explicitly establish cyber security reporting criteria. The NRC has developed Draft Regulatory Guide DG-5019, "Reporting of Safeguards Events," but has not finalized or issued it at the time of this summary.

3.8.7 Incident Response Assistance

{Calvert Cliffs 3 Nuclear Project, LLC} provides competent and trained incident response support personnel who are available year round, 24 hours per day to offer advice and assistance to users of CDAs in response to and reporting of cyber security incidents. The support resource is an integral part of {Calvert Cliffs 3 Nuclear Project, LLC}'s incident response capability.

{Calvert Cliffs 3 Nuclear Project, LLC} employs mechanisms to increase the availability of incident response-related information and support.

3.8.8 Cyber Incident Response Plan

{Calvert Cliffs 3 Nuclear Project, LLC} developed an incident response plan that:

- Describes the structure and organization of the cyber incident response capability,
- Provides a high-level approach for how the cyber incident response capability fits into the overall organization,
- Defines reportable cyber incidents consistent with Regulatory Position 3.8.6,
- Provides metrics for measuring the cyber incident response capability within the organization,
- Defines the resources and management support needed to effectively maintain and mature an incident response capability, and
- Is reviewed and approved by the Cyber Security Program Sponsor.

{Calvert Cliffs 3 Nuclear Project, LLC} distributes copies of the incident response plan plant personnel including incident response personnel, reviews the incident response plan {annually}, revises the incident response plan to address changes or problems encountered during plan implementation, execution, or testing, and communicates incident response plan changes to plant personnel including incident response personnel.

3.9 Contingency Planning/Continuity of Safety, Security, and Emergency Preparedness Functions

3.9.1 Contingency Planning Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} developed, disseminated, and {annually} reviews and updates the following:

- A formal, documented contingency planning policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among {Calvert Cliffs 3 Nuclear Project, LLC} entities, and compliance, and
- Formal, documented procedures to facilitate the implementation of the contingency planning policy and associated contingency planning controls.

{Calvert Cliffs 3 Nuclear Project, LLC} updates contingency planning policy and procedures and, where necessary, related policies and procedures for other programs when {Calvert Cliffs 3 Nuclear Project, LLC} review indicates updates are required.

{Calvert Cliffs 3 Nuclear Project, LLC}'s contingency plan includes the following:

- Required response to events or conditions of varying duration and severity that would activate the recovery plan,
- Procedures for operating the CDAs in manual mode with external electronic connections severed until secure conditions can be restored,
- Roles and responsibilities of responders,
- Processes and procedures for the backup and secure storage of information,
- Complete and up-to-date logical diagrams depicting network connectivity,
- Current configuration information for components,
- Personnel list (according to title or function or both) for authorized physical and cyber access to the CDA,
- Communication procedure and list of personnel (according to title or function or both) to contact in the case of an emergency, and
- Documented requirements for the replacement of components.

3.9.2 Contingency Plan

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Implementing a cyber security contingency plan to maintain the SSEP functions by developing and disseminating roles, responsibilities, assigned individuals with contact information, and activities associated with determining the effects of CDAs after a compromise, disruption or failure and restoring those CDAs,
- Coordinating contingency plan development with {Calvert Cliffs 3 Nuclear Project, LLC} organizations responsible for related plans (e.g., emergency plan, physical security plan) and requirements (e.g., technical specifications),
- Maintaining the necessary resources and capacity to ensure that necessary information processing, telecommunications, and environmental support exist during crisis situations,
- Documenting the resources needed to ensure that the capacity necessary for information processing, telecommunications, and environmental support exists during crisis situations, and
- Deploying CDAs such that, in the event of a loss of processing within a CDA or a loss of communication with operational facilities, CDAs will execute predetermined actions.

3.9.3 Contingency Plan Testing

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for taking the following actions:

- Tests and/or exercises and documents the contingency plan {at least annually} to verify its effectiveness and the organization's readiness to execute this plan,
- Reviews the contingency plan test and exercise results and initiates appropriate corrective actions,
- Coordinates contingency plan testing and/or exercises with {Calvert Cliffs 3 Nuclear Project, LLC} elements responsible for related plans,
- Tests and/or exercises and documents the contingency plan at emergency and/or backup sites to familiarize contingency personnel with these facilities and their available resources and to evaluate the {CCNPP Unit 3} capabilities to support contingency operations,
- Employs automated mechanisms to thoroughly and effectively test/exercise the contingency plan by providing a more complete coverage of contingency issues and selecting more realistic test/exercise scenarios and environments,
- Includes recovery and reconstitution of CDAs as part of contingency plan testing,
- Establishes and documents alternate controls when the contingency plan cannot be tested or exercised on production CDAs because of the potential for a significant adverse impact on safety, security, performance, or reliability of the site or CDA, and
- Uses scheduled and unscheduled system maintenance activities, including responding to CDA component and system failures, as an opportunity to test or exercise the contingency plan.

3.9.4 Contingency Plan Training

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Training personnel in their contingency roles and responsibilities with respect to the CDAs and providing refresher training {at least annually} or consistent with the {Calvert Cliffs 3 Nuclear Project, LLC} overall contingency program, whichever period is shorter,
- Maintaining training procedures and documenting training records of individuals,
- Including training drills to familiarize contingency personnel with the facility, CDAs, and available resources and evaluating the site's capabilities to support contingency operations,
- Employing automated mechanisms to thoroughly and effectively test/drill the contingency plan by providing more complete coverage of contingency issues, and

- Selecting realistic test/drill scenarios and environments, effectively stressing the CDAs.

3.9.5 Alternate Storage Site and Location for Backups

{Calvert Cliffs 3 Nuclear Project, LLC} identifies and documents alternate storage locations and initiates necessary agreements to permit the storage of CDA backup information. The frequency of CDA backups and the transfer rate of backup information to the alternate storage locations are consistent with {Calvert Cliffs 3 Nuclear Project, LLC}'s recovery time objectives and recovery plan objectives.

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Identifying an alternate storage location that is geographically separated from the primary storage location so as not to be susceptible to a common hazard,
- Configuring the alternate storage location to facilitate recovery of operation, and
- Identifying and documenting potential accessibility problems to the alternate storage location in the event of a wide area disruption or disaster and implementing explicit mitigation actions.

3.9.6 CDA Backups

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Conducting backups of user-level and system-level information,
- Backing up CDAs at an interval identified for the CDA or based on trigger events,
- Protecting backup information at the storage location,
- Testing and documenting backup information {monthly} to verify media reliability and information integrity,
- Using backup information in the restoration of CDA functions as part of contingency plan testing,
- Protecting system backup information from unauthorized modification,
- Storing backup copies of the operating system and other critical CDA software in a separate facility or in a fire-rated container that is not collocated with the operational software, and
- Establishing and documenting the timeframe in which data or the CDA must be restored and the frequency at which critical data and configurations are changing.

3.9.7 Recovery and Reconstitution

{Calvert Cliffs 3 Nuclear Project, LLC} employs mechanisms with supporting procedures that allow CDAs to be recovered and reconstituted to a known secure state following a disruption or failure and only when initiated by authorized personnel. {Calvert Cliffs 3 Nuclear Project, LLC} performs regression testing before returning to normal operations to ensure that CDA are performing correctly.

3.10 Awareness and Training

3.10.1 Cyber Security Awareness and Training

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents the training requirements necessary for licensee/applicant personnel and contractors to perform their assigned duties and responsibilities in implementing the requirements of the program.

{Calvert Cliffs 3 Nuclear Project, LLC} individuals are trained to a level of cyber security knowledge appropriate to their assigned responsibilities in order to provide high assurance that these individuals are able to perform their job functions properly.

3.10.2 Awareness Training

{Calvert Cliffs 3 Nuclear Project, LLC}'s cyber security awareness training is designed to increase an individual's sensitivity to cyber threats and vulnerabilities and their recognition of the need to protect data and information. Policy-level awareness training provides employees and contractors with the ability to understand security

policies so that the program is effectively implemented. Individual users must understand their responsibility for adherence to applicable policies and standards.

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents requirements for the following:

- Training programs provide basic cyber security awareness training for facility personnel. Refresher or continuous training provides updates on new threats and technology.
- Cyber security awareness is provided by displaying posters, offering security-messaged items, generating e-mail advisories and notices, and displaying logon screen messages.
- Training includes practical exercises to simulate actual cyber incidents, recovery plans, response plans and adversary attacks.

{Calvert Cliffs 3 Nuclear Project, LLC} develops and documents the content of cyber security training based on the following:

- Assigned roles and responsibilities,
- Specific requirements identified by the defensive strategy, and
- CDAs to which personnel have authorized access.

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents requirements for training to provide the following:

- Cyber security awareness training for {Calvert Cliffs 3 Nuclear Project, LLC} employees and contractors which addresses the following:
 - The site-specific objectives, management expectations, programmatic authority, roles and responsibilities, policies, procedures, and consequences for noncompliance with the cyber security program,
 - General attack methodologies, including social engineering techniques and appropriate and inappropriate cyber security practices,
 - Attack indicators, such as the following:
 - Unusually heavy network traffic,
 - Out of disk space or significantly reduced free disk space,
 - Unusually high CPU usage,
 - Creation of new user accounts,
 - Attempted or actual use of administrator-level accounts,
 - Locked-out accounts,
 - Account in-use when the user is not at work,
 - Cleared log files,
 - Full log files with unusually large number of events,
 - Antivirus or IDS alerts,
 - Disabled antivirus software and other security controls,
 - Unexpected patch changes,
 - Machines connecting to outside IP addresses,
 - Requests for information about the system (social engineering attempts),
 - Unexpected changes in configuration settings,
 - Unexpected system shutdown,
 - Unusual activity from control devices,
 - Loss of signal from control devices, and

- Unusual equipment in secure areas,
- Organizational contacts to whom to report suspicious activity, incidents, and violations of cyber security policies, procedures, or practices,
- An explanation as to why access and control methods are required,
- Measures users can employ to reduce risks, and
- The impact on the organization if the control methods are not incorporated.

3.10.3 Technical Training

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents training programs for personnel performing, verifying, or managing activities within the scope of the program to ensure that suitable proficiency is achieved and maintained. {Calvert Cliffs 3 Nuclear Project, LLC} individuals that have cyber security responsibilities related to programs, processes, procedures, or individuals that are involved in the design, modification, and maintenance of CDAs, will receive technical training.

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents requirements to do the following:

- Provide cyber security-related technical training to individuals:
 - Before authorizing access to CDAs or performing assigned duties,
 - When required by policy or procedure changes and plant modifications, and
 - Annually or at an interval as defined by the {Calvert Cliffs 3 Nuclear Project, LLC}, whichever is shorter, to mitigate risk and to ensure personnel maintain competency, and
- Provide cyber security-related technical training on applicable cyber security concepts and practices to those individuals whose roles and responsibilities involve designing, installing, operating, maintaining, or administering (e.g., serving as a system administrator) CDAs or associated networks which addresses the following:
 - Knowledge of specific cyber security and engineering procedures, practices, and technologies, including implementation methods and design requirements, which apply to the assets they may encounter as part of their job and
 - General information on cyber vulnerabilities, potential consequences to CDAs and networks of successful cyber attacks, and cyber security risk reduction methods

{Calvert Cliffs 3 Nuclear Project, LLC} provides system managers, cyber security specialists, system owners, network administrators, and other personnel having access to system-level software with security-related technical training to perform their assigned duties.

3.10.4 Specialized Cyber Security Training

{Calvert Cliffs 3 Nuclear Project, LLC} individuals who have programmatic and procedural cyber security authority and require the necessary skills and knowledge to execute capabilities expected of a cyber security specialist receive specialized cyber security training in order to design, execute, and manage the cyber defensive strategy effectively.

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents requirements for advanced training for individuals who are designated security experts or specialists, including the cyber security specialists with roles and responsibilities for cyber security, incident response, and the execution and management of defense-in-depth protective strategies. Advanced training addresses the following:

- Achievement and maintenance of the necessary up-to-date skills and knowledge in core competencies of data security, operation system security, application security, network security, security controls, intrusion analysis, incident management and response, digital forensics, penetration testing, and plant system functionality and operations,

- Competency in the use of tools and techniques to physically and logically harden CDAs and networks to reduce vulnerabilities to cyber attack,
- The provision of cyber security guidance, assistance, and training for other staff members,
- The review of programmatic and system-specific cyber security plans and practices,
- Assessment of CDAs, networks, and assets for compliance with cyber security policies, and
- Design, acquisition, installation, operation, maintenance, or administration of security controls.

3.10.5 Cross-Functional Cyber Security Team

{Calvert Cliffs 3 Nuclear Project, LLC} develops, implements, and documents a cross-functional cyber security team (CST).

{Calvert Cliffs 3 Nuclear Project, LLC} develops, implements, and documents a program to share expertise and varied domain knowledge between members of the CST.

{Calvert Cliffs 3 Nuclear Project, LLC}'s CST includes, at a minimum, a member of the organization's information technology staff, an instrumentation and control system engineer, a control system operator, a subject matter expert in cyber security, and a member of the management staff.

{Calvert Cliffs 3 Nuclear Project, LLC}'s cyber security subject matter experts' skills include network architecture and design, security processes and practices, and secure infrastructure design and operation.

{Calvert Cliffs 3 Nuclear Project, LLC}'s CST also includes the control system vendor or system integrator, as needed.

{Calvert Cliffs 3 Nuclear Project, LLC}'s CST reports {to the Director IT – Nuclear Cyber Security}.

3.10.6 Situation Awareness

{Calvert Cliffs 3 Nuclear Project, LLC} security training describes the physical processes being controlled, as well as the associated CDAs and security controls.

3.10.7 Feedback

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents a feedback process for personnel and contractors to refine the cyber security program and address identified training gaps.

3.10.8 Security Training Records

{Calvert Cliffs 3 Nuclear Project, LLC} documents and monitors individual cyber security training.

3.10.9 Contacts with Security Groups and Associations

{Calvert Cliffs 3 Nuclear Project, LLC} maintains contact with selected security groups to remain informed of newly recommended security practices, techniques, and technologies and to share current security-related information including threats, vulnerabilities, and incidents.

3.10.10 Roles and Responsibilities

{Calvert Cliffs 3 Nuclear Project, LLC} creates, documents, and staffs the following positions (roles) with appropriately qualified personnel:

Role: Cyber Security Sponsor

Requirements: member of senior site management

Responsibilities:

- Overall responsibility and accountability for the cyber security program, and
- Provides resources required for the development, implementation and sustenance of the cyber security program.

Role: Cyber Security Program Manager

Responsibilities:

- Provides oversight of the plant cyber security operations,
- Functions as a single point of contact for issues related to site cyber security,
- Provides oversight and direction on issues regarding nuclear plant cyber security,
- Initiates and coordinates CSIRT functions as required,
- Coordinates with the NRC as required during cyber security events,
- Oversees and approves the development and implementation of a cyber security plan,
- Ensures and approves the development and operation of the cyber security education, awareness, and training program, and
- Oversees and approves the development and implementation of cyber security policies and procedures.

Role: Cyber Security Specialist

Responsibilities:

- Protects CDAs from cyber threat,
- Understands the cyber security implications surrounding the overall architecture of plant networks, control systems, safety systems, operating systems, hardware platforms, plant- specific applications, and the services and protocols upon which those applications rely,
- Performs cyber security evaluations of digital plant systems,
- Conducts security audits, network scans, and penetration tests against CDAs as necessary,
- Conducts cyber security investigations involving compromise of CDAs,
- Preserves evidence collected during cyber security investigations to prevent loss of evidentiary value, and
- Maintains expert skill and knowledge level in the area of cyber security.

Role: Cyber Security Incident Response Team

Requirements:

- Personnel have knowledge of cyber forensics and
- Functions in accordance with the incident response plan

Responsibilities:

- Initiates emergency action when required to safeguard CDAs from compromise and to assist with the eventual recovery of compromised systems,
- Contains and mitigates incidents involving critical and other support systems, and
- Restores compromised CDAs.

3.11 Configuration Management

3.11.1 Configuration Management

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents configuration management security controls for CDAs consistent with the process described in Section 1.4.2.1 of {this plan}.

3.11.2 Configuration Management Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} develops, disseminates, and {annually} reviews and updates a formal, documented configuration management policy and implementing procedures that address the purpose, scope,

roles, responsibilities, management commitment, {coordination among {Calvert Cliffs 3 Nuclear Project, LLC} entities}, associated configuration management controls, and compliance.

{Calvert Cliffs 3 Nuclear Project, LLC} documents its configuration management policy as a part of the {CCNPP Unit 3} configuration management plan and includes hardware configurations, software configurations, and access permissions. Changes to hardware or software are documented and accessed in accordance with these policies and implementing procedures.

The structured configuration management process evaluates and controls changes to CDAs to ensure that CDAs remains secure. Before any change is implemented, {Calvert Cliffs 3 Nuclear Project, LLC} confirms that new vulnerabilities are not introduced.

3.11.3 Baseline Configuration

{Calvert Cliffs 3 Nuclear Project, LLC} develops, documents, and maintains a current baseline configuration of CDAs and their connections including the interface characteristics, security requirements, and the nature of the information communicated. As a part of the configuration management process, {Calvert Cliffs 3 Nuclear Project, LLC} employs {manual and/or automated} mechanisms to maintain an up-to-date, complete, accurate, and readily available baseline configuration of each CDA.

{Calvert Cliffs 3 Nuclear Project, LLC} documents the up-to-date baseline configurations and audits the configurations {quarterly}. Baseline configurations include {but are not limited to} a current list of all components (e.g., hardware, software), configuration of peripherals, version releases of current software, and switch settings of machine components. For each CDA, {Calvert Cliffs 3 Nuclear Project, LLC} maintains a log of configuration changes made, the name of the person who implemented the change, the date of the change, the purpose of the change, and any observations made during the course of the change.

{Calvert Cliffs 3 Nuclear Project, LLC} documents and maintains baseline configurations for development and test environments that are managed separately from the operational/production baseline configuration.

{Calvert Cliffs 3 Nuclear Project, LLC} employs a "deny-all, permit-by-exception" authorization policy to identify and authorize software permitted on {Calvert Cliffs 3 Nuclear Project, LLC} CDAs (i.e., white lists of authorized software). After authorized changes are implemented, {Calvert Cliffs 3 Nuclear Project, LLC} verifies that security features still function properly and that adequate cyber security levels are maintained.

Individuals authorized to modify CDA configurations are properly trained and qualified to perform the modifications. {Calvert Cliffs 3 Nuclear Project, LLC} defines the minimum physical and logical access for the modifications. Additionally, {Calvert Cliffs 3 Nuclear Project, LLC} employs electronic means to monitor CDA access to ensure that only authorized systems and services are used. Furthermore, {Calvert Cliffs 3 Nuclear Project, LLC} documents the justification for the use of alternate (compensating) security controls for instances in which monitoring cannot be done electronically, including the following:

- Physically restricting access,
- Monitoring and recording physical access to enable timely detection and response to intrusions,
- Employing auditing and validation measures (e.g., security officer rounds, periodic monitoring of tamper seals),
- Ensuring authorized individuals are trustworthy and reliable in accordance with 10 CFR 73.56,
- Ensuring that authorized individuals are operating under established work management controls, and
- Conducting post maintenance testing to validate that changes are implemented correctly.

{Calvert Cliffs 3 Nuclear Project, LLC} reviews log records {no less frequently than once a quarter} in compliance with the physical security plan.

3.11.4 Configuration Change Control

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Authorizing and documenting changes to CDAs

- Retaining and reviewing records of CDA configuration changes and audit activities associated with CDA configuration changes and employing {manual and/or automated} mechanisms to:
 - Document changes to CDAs,
 - Notify designated approval authorities, and
 - Prohibit implementation of changes until designated approvals are received and documented.

3.11.5 Security Impact Analysis of Changes and Environment

The {Calvert Cliffs 3 Nuclear Project, LLC}'s CST performs a security impact assessment before making changes to CDAs consistent with {Section 1.4.2.2 of this plan} to manage the cyber risk resulting from the changes. The CST evaluates, documents, and incorporates into the security impact analysis any identified safety and security interdependencies.

The {Calvert Cliffs 3 Nuclear Project, LLC} performs and documents the security impact assessment as part of the change approval process.

3.11.6 Access Restrictions for Change

{Calvert Cliffs 3 Nuclear Project, LLC} defines, documents, approves, and enforces physical and logical access restrictions associated with changes to CDAs and generates, retains, and audits the record {quarterly} and when there are indications that unauthorized changes may have occurred. {Calvert Cliffs 3 Nuclear Project, LLC} implements its configuration management program to address discovered deviations.

{Calvert Cliffs 3 Nuclear Project, LLC} employs automated mechanisms to detect unauthorized changes, to enforce access restrictions and to support subsequent audits of enforcement actions.

{Calvert Cliffs 3 Nuclear Project, LLC} documents the justification and details for alternate (compensating) security controls for situations in which a CDA cannot support the use of automated mechanisms to enforce access restrictions and to support subsequent audits of enforcement actions, including all of the following:

- Physically restricting access,
- Monitoring and recording physical access to enable timely detection and response to intrusions,
- Employing auditing and validation measures (e.g., security officer rounds, periodic monitoring of tamper seals),
- Ensuring authorized individuals are trustworthy and reliable in accordance with 10 CFR 73.56,
- Ensuring that authorized individuals are operating under established work management controls, and
- Conducting post maintenance testing to validate that changes are implemented correctly.

3.11.7 Configuration Settings

{Calvert Cliffs 3 Nuclear Project, LLC} applies configuration settings for CDAs by (1) documenting the most restrictive mode, (2) valuating operational requirements, and (3) enforcing and documenting the most restrictive operational configuration settings based upon explicit operational requirements. This is achieved by the following:

- Establishing and documenting configuration settings for CDAs that reflect the most restrictive mode,
- Documenting and approving any exceptions from the most restrictive mode configuration settings for individual components within CDAs based upon explicit operational requirements,
- Enforcing the configuration settings in CDAs and monitoring and controlling changes to the configuration settings in accordance with {Calvert Cliffs 3 Nuclear Project, LLC} policies and procedures,
- Documenting and employing automated mechanisms to {centrally} manage, apply, and verify configuration settings,
- Documenting and employing {automated mechanisms and/or manual mechanisms} to respond to unauthorized changes to {Calvert Cliffs 3 Nuclear Project, LLC}-defined configuration settings, and

- Documenting the justification for alternate (compensating) security controls for situations in which a CDA cannot support the use of automated mechanisms to {centrally} manage, apply, and verify configuration settings, including all of the following:
 - Physically restricting access,
 - Monitoring and recording physical access to enable timely detection and response to intrusions,
 - Employing auditing/validation measures (e.g., security officer rounds, periodic monitoring of tamper seals),
 - Ensuring authorized individuals are trustworthy and reliable in accordance with 10 CFR 73.56,
 - Ensuring that authorized individuals are operating under established work management controls, and
 - Conducting post maintenance testing to validate that changes are implemented correctly.

3.11.8 Least Functionality

{Calvert Cliffs 3 Nuclear Project, LLC} configures and documents CDA configuration settings to provide only essential capabilities and specifically prohibits, protects, and restricts the use of insecure functions, ports, protocols and services. {Calvert Cliffs 3 Nuclear Project, LLC} reviews CDAs {monthly} to identify and eliminate unnecessary functions, ports, protocols, and services. {Calvert Cliffs 3 Nuclear Project, LLC} documents and employs automated mechanisms to prevent program execution. {Calvert Cliffs 3 Nuclear Project, LLC} uses {white-lists, black-lists, and gray-lists} application control technologies.

3.11.9 Component Inventory

{Calvert Cliffs 3 Nuclear Project, LLC} develops, documents, and maintains an inventory of the components of CDAs that has the following attributes:

- Accurately reflects the current system configuration,
- Ensures that the location (logical and physical) of each component is consistent with the authorized boundary of the CDA,
- Provides the proper level of granularity deemed necessary for tracking and reporting and for effective property accountability,
- Updates the inventory of system components as an integral part of component installations and system updates,
- Employs automated mechanisms to maintain an up-to-date, complete, accurate, and readily available inventory of system components,
- Employs automated mechanisms to detect the addition of unauthorized components or devices into the environment and disables access by such components or devices or notifies designated {Calvert Cliffs 3 Nuclear Project, LLC} officials, and
- Documents the {names or roles} of the individuals responsible for administering those components.

MANAGEMENT CONTROLS

3.12 System and Service Acquisition

3.12.1 System and Services Acquisition Policy and Procedures

{Calvert Cliffs 3 Nuclear Project, LLC} develops, disseminates, and {annually} reviews and updates a formal, documented system and services acquisition policy that addresses purpose, scope, roles, responsibilities, management commitment, {coordination among {Calvert Cliffs 3 Nuclear Project, LLC} entities}, associated system and service acquisition controls, and compliance.

{Calvert Cliffs 3 Nuclear Project, LLC} develops, disseminates, and {annually} reviews and updates formal, documented procedures to facilitate the implementation of the system and services acquisition policy and associated system and services acquisition controls.

3.12.2 Supply Chain Protection

{Calvert Cliffs 3 Nuclear Project, LLC} protects against supply chain threats and vulnerability by employing the following list of measures to protect against supply chain threats to maintain the integrity of the CDAs that are acquired:

- Establishment of trusted distribution paths,
- Validation of vendors, and
- Requiring tamper proof products or tamper evident seals on acquired products.

{Calvert Cliffs 3 Nuclear Project, LLC} performs an analysis for each product acquisition to determine that the product provides the security requirements necessary to address the security controls in Sections 2 and 3 of this plan.

{Calvert Cliffs 3 Nuclear Project, LLC} uses heterogeneity to mitigate vulnerabilities associated with the use of a single vendor's product.¹⁷

3.12.3 Trustworthiness

{Calvert Cliffs 3 Nuclear Project, LLC} requires that software developers employ software quality and validation methods to minimize flawed or malformed software.

{Calvert Cliffs 3 Nuclear Project, LLC} establishes, implements, and documents requirements to require all tools used to perform cyber security tasks or SSEP functions to undergo a commercial qualification process similar to that for software engineering tools that are used to develop digital instrumentation and control systems.

3.12.4 Integration of Security Capabilities

{Calvert Cliffs 3 Nuclear Project, LLC} documents and implements a program to ensure that new acquisitions contain security design information, capabilities or both to implement security controls in Section 2 of this plan. Such security capabilities include the following:

- Being cognizant of evolving cyber security threats and vulnerabilities,
- Being cognizant of advancements in cyber security protective strategies and security controls,
- Conducting analyses of the effects that each advancement could have on the security, safety, and operation of critical assets, systems, CDAs, and networks and implementing these advancements in a timely manner, and
- Replacing legacy systems as they reach end of life with systems that incorporate security capabilities.

{Calvert Cliffs 3 Nuclear Project, LLC} establishes timeframes to minimize the time it takes to deploy new and more effective protective strategies and security controls.

3.12.5 Developer Security Testing

{Calvert Cliffs 3 Nuclear Project, LLC} documents and requires that system developers and integrators of acquired CDAs create, implement, and document a security test and evaluation plan to ensure that the acquired products meet all specified security requirements (1) that the products are free from known, testable vulnerabilities and malicious code by identifying and eliminating these following vulnerabilities and other vulnerabilities that may change with new technology:

- Weak, unproven, or nonstandard cryptographic modules,
- Insecure network protocols for sensitive communications,
- Known insecure software components or libraries,
- Known vulnerabilities,
- Insecure configuration files or options that act to control features of the application,
- Inadequate or inappropriate use of access control mechanisms to control access to system resources,

¹⁷ {Heterogeneity will be deployed in the acquisition of all CDAs where possible and applicable.}

- Inappropriate privileges being granted to users, processes, or applications,
- Weak authentication mechanisms,
- Improperly or failing to validate input and output data,
- Insecure or inadequate logging of system errors or security-related information,
- Inadequately bounded buffers,
- Format string vulnerabilities,
- Privilege escalation vulnerabilities,
- Unsafe database transactions,
- Unsafe use of native function calls,
- Hidden functions and vulnerable features embedded in the code,
- Implemented security features do not themselves act to increase the risk of security vulnerabilities, increase susceptibility to cyber attack, or reduce the reliability of design-basis functions.
- Use of unsupported or undocumented methods or functions, and
- Use of undocumented code or malicious functions that might allow either unauthorized access or use of the system or the system to behave beyond the system requirements.

(2) and developers cyber security program maintains the integrity of the acquired system until the product is delivered to the {Calvert Cliffs 3 Nuclear Project, LLC} by implementing equivalent security controls as described in RG 5.71 to prevent tampering and to provide high assurance that the integrity of the developed CDA is maintained until delivered to the licensee.

{Calvert Cliffs 3 Nuclear Project, LLC} requires the developer to perform and document that security requirements are verified and validated and that security controls implemented in the product and used to meet the requirements of this plan are tested to ensure they are effective per Section 1.4.1.2.

{Calvert Cliffs 3 Nuclear Project, LLC} requires documentation of all of the following activities:

- System design transformed into code, database structures, and related machine executable representations,
- Hardware and software configuration and setup,
- Software coding practices and testing,
- Communication configuration and setup (including the incorporation of reused software and commercial off-the-shelf products),
- The results of unit tests performed to ensure that the code was developed correctly and accurately and completely reflects the security design configuration transformations from the requirements,
- Details of the implementation of each required security feature within the developed code base. The listing includes reference the coded functions and modules within the code base that were developed to implement the security features,
- Security configurations implemented to meet security design features specified in the requirements,
- Operating system security configurations implemented to meet security design features specified in the requirements are documented,
- For programming languages that support static analysis source code scanners, results of the following are documented:
 - The static source code vulnerability analysis performed to inspect the developed code for potential security defects, poor programming practices, hidden functions, and vulnerable features within the code during the implementation of the code base and methods applied to eliminate these vulnerabilities,

- The security defect tracking metrics used to capture and track the identification, type, classification, cause, and remediation of security defects found within the code, and
- The defects encountered during the translation of the design features specified in the requirements into code.
- For all programming languages, the results of the following are documented:
 - A dynamic source code vulnerability analysis performed to inspect the developed code for potential security defects, poor programming practices, hidden functions, and vulnerable features within the code during the implementation of the code base and methods applied to eliminate these vulnerabilities,
 - The security defect tracking metrics used to capture and track the identification, type, classification, cause, and remediation of security defects found within the code, and
 - The defects encountered during the translation of the design features specified in the requirements into code.

{Calvert Cliffs 3 Nuclear Project, LLC} requires that CDA developers/integrators:

- Perform configuration management during CDA design, development, implementation, and operation,
- Manage and control changes to the CDA,
- Implement only {Calvert Cliffs 3 Nuclear Project, LLC} approved changes,
- Document approved changes to the CDA, and
- Track security flaws and flaw resolution.

3.12.6 Licensee/Applicant testing

{Calvert Cliffs 3 Nuclear Project, LLC} verifies and validates the results of the developer's security testing in conducted in accordance with Section 3.12.5 above.

{Calvert Cliffs 3 Nuclear Project, LLC} is responsible for the following:

- Testing CDA (e.g., offline on a comparable CDA) security devices, security controls, and software to ensure that they do not compromise the CDA or the operation of an interconnected CDA operation before installation,
- Testing to ensure that CDAs do not provide a pathway to compromise the CDA or other CDAs,
- Implementation of the security controls in Sections 2 and 3 of this plan in accordance with the process described in Section 1.3.1.6 of this plan,
- Testing of the security controls for effectiveness, as described in Section 1.4.1.2 of this plan,
- Performance of vulnerability scans, in accordance with Section 1.4.1.3 of this plan and Section 3.13.1 of this plan, against the CDA in its integrated state and correction, elimination, or discussion of discovered vulnerabilities,
- Installation and testing of the CDA in the target environment, and
- Performance of an acceptance review and test of the CDA security features.

{Calvert Cliffs 3 Nuclear Project, LLC} documents the following:

- Security controls implemented in accordance with Section 2 of this plan.
- Verification of the effectiveness of the security controls implemented in accordance with Section 3 of this plan.
- Security design features developed to address the identified security requirements for the CDA (if any), in addition to the security controls implemented in accordance with Section 2 of this plan. For each security feature or configuration to be implemented, the documentation includes a description of the feature, its method of implementation, and any configurable options associated with the feature are provided. Each security feature designed into the system is traceable to its corresponding security requirement.

The security reviews of the implemented design by the cyber security organization responsible for the protection of the critical assets/systems/networks are documented. The review ensures that the security design configuration item transformations from the requirements implemented are correct, accurate, and complete.

{Calvert Cliffs 3 Nuclear Project, LLC} requires {annual} audits of CDAs to verify the following:

- The security controls present during testing remain in place and are functioning correctly in the production system.
- CDAs are free from known vulnerabilities and security compromises and continue to provide information on the nature and extent of compromises, should they occur.
- The change management {process and/or program} is functioning effectively and is recording configuration changes appropriately.

3.13 Security Assessment and Risk Management

3.13.1 Threat and Vulnerability Management

{Calvert Cliffs 3 Nuclear Project, LLC} does the following:

- Perform assessments and scans for vulnerabilities in CDAs {no less frequently than once a quarter} and at random intervals in accordance with Section 1.4.1.3 of this plan and when new potential CDA vulnerabilities are reported or identified.
- Employ vulnerability scanning tools and techniques that promote interoperability among tools and automating parts of the vulnerability management process by:
 - Enumerating platforms, software flaws, and improper configurations,
 - Formatting and making transparent checklists and test procedures, and
 - Measuring vulnerability impacts.
- Analyze vulnerability scan reports and remediate vulnerabilities within a time period that will provide high assurance that CDAs are protected from cyber attacks up to and including the DBT.
- Eliminate similar vulnerabilities in other CDAs.
- Employ vulnerability scanning tools that include the capability to update the list of cyber vulnerabilities scanned and update the list of CDA vulnerabilities scanned {monthly} and when new vulnerabilities are identified and reported.
- Employ vulnerability scanning procedures that maximize the breadth and depth of coverage (i.e., CDA components scanned and vulnerabilities checked).
- Discern and document what information associated with the CDA is discoverable by adversaries.
- Perform security testing to determine the level of difficulty in circumventing the security controls of the CDA. {Testing methods include penetration testing, malicious user testing, and independent verification and validation.}
- Include privileged access authorization to CDAs for selected vulnerability scanning activities to facilitate more thorough scanning.
- Employ automated mechanisms to compare the results of vulnerability scans over time to determine trends in CDA vulnerabilities and mitigation/ flaw remediation activities.
- Employ automated mechanisms to detect and notify authorized personnel of the presence of unauthorized software on CDAs.
- Ensure that SSEP functions are not adversely impacted by the scanning process. Where this may occur, CDAs are removed from service or replicated (to the extent feasible) before scanning is conducted or be scheduled to occur during planned CDA outages whenever possible. Where {Calvert Cliffs 3 Nuclear Project, LLC} cannot conduct vulnerability scanning on a production CDA because of the potential for an adverse impact on

SSEP functions, alternate controls (e.g., providing a replicated system or CDA to conduct scanning) are employed.

The {Calvert Cliffs 3 Nuclear Project, LLC} reviews historic audit logs to determine if a vulnerability identified in the CDA has been previously exploited.

3.13.2 Risk Mitigation

Protection and mitigation of risk are achieved by implementing (1) the defense-in-depth strategies discussed in Section C.3.2 of to RG 5.71, (2) the security controls described in Sections 2 and 3 of this plan, and (3) digital equipment and software cyber attack detection, prevention, and recovery techniques and tools to the systems, structures, and components within the scope of the rule and (4) Section 1.4 of this plan. {Calvert Cliffs 3 Nuclear Project, LLC} has the detailed information on how these requirements are implemented to achieve the high assurance objectives of security controls specified in this plan. The detailed information is available for NRC inspections and audits.

3.13.3 Corrective Action Program

{Calvert Cliffs 3 Nuclear Project, LLC} established, implemented, and documented the criteria consistent with RG 5.71 for adverse conditions and the requirements for corrective action. The adverse impact resulting from a cyber security incident is evaluated, tracked, and adjusted in accordance with the {Calvert Cliffs 3 Nuclear Project, LLC} Corrective Action Program and in a manner consistent with RG 5.71.
