Subject: latest version

rev 6 attached.

I wanted another person to have the current one - working off of my c: drive in myfiles/copies folder for ADAMs - my g:drive is not the current version because we're now working in ADAMs.

I also want someone else to know that the enclosure 2 document in ADAMs is not this version - it needs to be swapped with the final version (or close to final). I'll do it once we're closer, but you have to be careful, and if I'm doing more track changes, I'd prefer not to do it anymore than I have to.

(b)(5)

I'll have the main points outlined that we need to discuss. Hopefully, you were able to draft some language from that OK paper - that will really help if we have an alternative to the language. And, I hope, this will finish it up and we don't have to get into any of the discussion of pushing the date out.....

Upon the effective date of a State Agreement authorized under Section 274 of the Atomic Energy Act of 1954, as amended, NRC relinquishes regulatory authority and the Agreement State assumes regulatory authority over the radioactive materials and activities specified in the Agreement. The legislative history for this statutory provision specifically states that Congress did not intend to allow concurrent regulatory authority over licensees for public health and safety.

(b)(5)
