Mr. Joseph A. (Buzz) Miller  
Executive Vice President  
Southern Nuclear Operating Company  
P.O. Box 1295  
Birmingham, AL 35201

SUBJECT: REQUEST FOR ADDITIONAL INFORMATION LETTER NO. 058 RELATED TO  
SRP SECTION 14.2 FOR THE VOGTLE ELECTRIC GENERATING PLANT  
UNITS 3 AND 4 COMBINED LICENSE APPLICATION

Dear Mr. Miller:

By letter dated March 28, 2008, Southern Nuclear Operating Company (SNC), submitted its application to the U. S. Nuclear Regulatory Commission (NRC) for a combined license (COL) for two AP1000 advance passive pressurized water reactors pursuant to 10 CFR Part 52. The NRC staff is performing a detailed review of this application to enable the staff to reach a conclusion on the safety of the proposed application.

The NRC staff has identified that additional information is needed to continue portions of the review. The staff's request for additional information (RAI) is contained in the enclosure to this letter.

To support the review schedule, you are requested to respond within 45 days of the date of this letter. If changes are needed to the final safety analysis report, the staff requests that the RAI response include the proposed wording changes.

If you have any questions or comments concerning this matter, you may contact me at 301-415-1670.

Sincerely,

**/RA/**

Southern Nuclear Operating Co.

Docket No. 52-0025 and 52-0026

SRP Section: 14.02 - Initial Plant Test Program - Design Certification and New License Applicants

Application Section: 14.2.3, Test Specifications and Test procedures

**QUESTIONS for Quality and Vendor Branch 1 (AP1000/EPR Projects) (CQVP)**

**14.02-1**

The NRC Staff has identified the following post-COL item license conditions in FSAR Section 14.2. Please inform the NRC staff as to whether or not the proposed license condition is considered appropriate to support the Vogle Units 3 and 4 COL.

License Condition for First-Plant-Only and First-Three-Plant-Only Testing

Certain design features of the AP1000 plant will be subjected to special tests to establish unique phenomenological performance parameters of the AP1000 design. Because of the standardization of the AP1000 design, these special tests (designated as first-plant-only tests and first-three-plant-only tests) are not required on subsequent plants. These tests will be controlled through license conditions to ensure that relevant test results are reviewed, evaluated, and approved by the designated licensee management before proceeding with the next testing phase. Accordingly, the licensee will provide written notification to the Director of the Office of New Reactors once it determines that:

- (a) It has completed all first-plant-only tests and confirmed that the test results are within the range of values predicted in the acceptance criteria in the facility's FSAR.
- (b) It has completed all first-three-plant-only tests and confirmed that the test results are within the range of values predicted in the acceptance criteria in the facility's FSAR.
