SRP Section: 16 - Technical Specifications

Application Section: SRP 16

QUESTIONS for Technical Specification Branch (CTSB)

16-301

In Comanche Peak (CP) RAI 91, Question 16-16, the staff requested that Luminant resolve the COL Holder Items identified in Section 3.3 (Instrumentation) of the CP Units 3 and 4 Plant-Specific Technical Specifications (PTS), in accordance with Interim Staff Guidance Document DC/COL-ISG-8, "Necessary Content of Plant-Specific Technical Specifications When a Combined License is Issued." MHI, in cooperation with Luminant, decided on Option (3) of the ISG, and subsequently established a Setpoint Control Program (SCP) Administrative Controls TS in the DCD to resolve the COL Holder Items. In a letter to the NRC dated October 30, 2009, MHI transmitted proposed updates to the DCD to support incorporation of the SCP Specification.

MHI is requested to address the following items (see attached) associated with these proposed updates, which are identified as Enclosure 1 in the referenced letter.
