Yes. Since NJ has been licensing NARM and NRC has been licensing RAM, New Jersey would get the 500 RAM licenses from NRC and would combine/merge the RAM and NARM licensed activities into one license. This would leave NJ with 200 NARM only licenses, 200 RAM only licenses, and 300 combined licenses. For a total of 700 licenses. This is what NRC would have needed to do after the expiration of the NARM waiver for New Jersey if New Jersey had not applied for Agreement State status.

I don't understand "combined by New Jersey" - meaning they will take over our responsibility for those licenses, and combine the two (RAM and NARM) into one (state) license?

Dave:

If we don't have the various numbers in the paragraph, it will raise other questions. I suggested adding the following words (in red below) to explain the combining of the dually licensed sites.

Does this work.

Dennis and Torre -
In your draft press release, I'm confused by this paragraph:

If the proposed agreement is approved, it is estimated that there will be 700 total licenses in the State of New Jersey. NRC would transfer 500 licenses to the State's jurisdiction. In addition, the State would retain regulatory authority for approximately 500 NARM licenses. Approximately 300 of these NARM licenses are dually regulated by New Jersey and the NRC and will be combined by New Jersey.

Will be 700? How many are there now? And of the 300 dually regulated NARM licenses, are they all included in the 500 licenses we will transfer to NJ, or will they continue to be dually regulated? Do we need to get into the NARM issue at all, or could we just leave it with the 500 to be transferred?

thanks,
Dave
