TITLE: Verification of Initial Conditions Prior to Core Alterations.

PROGRAM APPLICABLE: SOT ____ SOCT ____ OLT X LOCT ____ACCEPTABLE EVALUATION METHOD: X PERFORM ____ SIMULATE ____ DISCUSSEVALUATION LOCATION: ____ SIMULATOR ____ CONTROL ROOM X CLASSROOMPROJECTED TIME: 30 MIN SIMULATOR IC NUMBER: N/A

ALTERNATE PATH ____ TIME CRITICAL ____ PRA ____

JPM DIRECTIONS:

1. This task is to be administered in a group, classroom setting with access to a variety of procedures (UOPs, STPs, SOPs, et al) available via the Exam Reference disk.
2. This task is designed to be performed with evaluation of pictures of the equipment from which operational information will be evaluated.
3. Due to the utilization of pictures, upon request, the status of the lights and switches may be clarified (See standards for the applicable light/switch).
4. Upon completion of elements 1-10, **all candidates** will be evaluated at the RO level.
5. **FOR SRO candidates ONLY:** after evaluation of elements 1-10, they will be provided a second Cue sheet (handout #2) and returned to the classroom to evaluate TS.

TASK STANDARD: Required for successful completion of this JPM:

NOTE: Incorrect assessment of any step within the appendix, or entry into any non-applicable LCO would constitute a critical task failure.

- Assess all steps of UOP-4.1, Appendix 6, Verification of Initial Conditions Prior to Core Alterations and identify all, if any, core alt. initial conditions listed in UOP-4.1, Appendix 6 which are not satisfied.
- **(For SRO ONLY):** Based on the conditions identified list all TS CONDITIONS, REQUIRED ACTIONS and COMPLETION TIMES for LCOs not met, if any.

EXAMINER: _____

Developer	H. Fitzwater	2/09/10
NRC Approval	SEE NUREG 1021 FORM ES-301-3	

CONDITIONS

When I tell you to begin, you are to perform or evaluate all steps FNP-1-UOP-4.1, Appendix 6, Verification of Initial Conditions Prior to Core Alterations. The conditions under which this task is to be performed are:

- a. Core Offload was suspended 18 hours ago.
- b. RCS temp is 100°F.
- c. Time to boil is >2 hours.
- d. A Fuel shuffle in the Spent Fuel Pool is ongoing.
- e. Communications between the MCR and a System Operator acting as the Cavity Watch have been verified available 10 minutes ago.
- f. RCS boron concentration is 2450 ppm following an over boration performed last shift.
- g. Rx Makeup water is being used to dilute the Reactor Cavity by chemistry's request.
- h. FNP-1-STP-18.4, Containment Midloop and/or Refueling Integrity Verification and Containment Closure, was completed yesterday at 1400.
- i. CTMT Main Purge system is in operation.
- j. The equipment hatch and all containment air locks are currently closed.
- k. The Ctmt Evacuation alarm is sounding inside Containment.
- l. The Audio Count Rate Channel is NOT producing any audible noises.
- m. Applicable equipment will be assessed using the provided photographs.
- n. You have been directed to perform or evaluate all steps of FNP-1-UOP-4.1, Appendix 6.
- o. Identify all initial conditions for core alterations listed in UOP-4.1, Appendix 6, which are not satisfied, if any.

INITIATING CUE: "You may begin."

EVALUATION CHECKLIST

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
<u> </u> START TIME		
1. (STEP 2.1 & 2.2) Checks correct version and conducted on appropriate unit.	1) Determines step 2.1 & 2.2 has been completed. Utilizes WebTop and verifies unit from initial conditions	S / U
2. (STEP 3.1) Communications between MCR and the Reactor Cavity verified within one hour.	2) Determines step 3.1 has been completed. Utilizes initial conditions to verify task complete.	S / U

NOTE: • Elements 3 through 5, 7 and 8 are performed by use of pictures. The pictures are sufficient to demonstrate light status and switch position, however **IF** light status or position is questioned, then the cues may be provided (see the standards column for the applicable light or switch).

EVALUATION CHECKLIST

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
<p>3. (STEP 3.2.1) Verify N-31, Source Range NI, detector operable.</p> <p>(reference SOP-39.0 section 4.1)</p> <p>a. Check N-31 Instrument power on AND control power on lights illuminated.</p> <p>b. Check switches aligned:</p> <p> i. Level Trip</p> <p> ii. Operation Selector</p> <p> iii. High Flux at shutdown</p> <p>c. Perform a channel check per STP-1.0 (SR 3.9.2.1).</p>	<p>3) Determines step 3.2.1 has been satisfied; Utilizes picture of N-31 and determines that the instrument is operable.</p> <p>a. lights are illuminated</p> <p>b. Switches are in position:</p> <p> i. Normal</p> <p> ii. Normal</p> <p> iii. Normal</p> <p>c. Acceptable per STP-1.0 allowances</p>	S / U
<p>* 4. (STEP 3.2.2) Verify N-32, Source Range NI, detector operable.</p> <p>(reference SOP-39.0 section 4.1)</p> <p>a. Check N-32 Instrument power on AND control power on lights illuminated.</p> <p>b. Check switches aligned:</p> <p> i. Level Trip</p> <p> ii. Operation Selector</p> <p> iii. High Flux at shutdown</p> <p>c. Performs a channel check per STP-1.0 (SR 3.9.2.1).</p>	<p>4) Determines step 3.2.2 can not be satisfied; Utilizes picture of N-32 and determines that the instrument is NOT operable.</p> <p>a. Lights are checked</p> <ul style="list-style-type: none"> • Instrument power light is <u>NOT</u> illuminated. • Control power is illuminated. <p>b. Switches are determined;</p> <p> i. Normal</p> <p> ii. Normal</p> <p> iii. Normal</p> <p>c. <u>NOT</u> Acceptable per STP-1.0 allowances.</p>	S / U

EVALUATION CHECKLIST

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
5. (STEP 3.2.3) Verify N-48, Gamma-metrics Source Range NI, detector operable. (reference SOP-39.0 section 4.3) <ul style="list-style-type: none"> a. Checks N-48 in service. b. Performs a channel check per STP-1.0 (SR 3.9.2.1). 	5) Determines step 3.2.3 has been satisfied. (May identify that the Refueling Coordinator must first be consulted.) <ul style="list-style-type: none"> a. Aligned and in service as indicated by picture and bulleted items listed on picture. b. Acceptable per STP-1.0 Table 1 allowances. 	S / U
6. (STEP 3.3) Reactor Coolant system 2000 ppm.	6) Determines step 3.3 has been satisfied; Utilizes initial conditions to verify boron concentration.	S / U

NOTE: Element 7 would require either R-5 being in service **OR** required action being taken. The candidate might question whether or not surveys are being performed. Additionally, due to rules of usage may stop the task and attempt to notify the SS.

IF required CUE: "The SS acknowledges the issue you have identified and directs you to continue. No compensatory actions have yet been completed."

* 7. (STEP 3.4.1) Verifies R-5 operable/operating. (Reference:SOP-45.0 section 4.1.3; TRM 13.3.4) <ul style="list-style-type: none"> a. Verify Operation Selector switch position. b. Verify Range Selector switch position. c. Verify Drawer indication lights: <ul style="list-style-type: none"> i. Power ii. Channel Test light iii. High Alarm iv. Low Alarm 	7) Identifies R-5 is <u>NOT</u> operable/operating; Determines step 3.4.1 has <u>NOT</u> been satisfied. (May annotate failure or need to initiate survey). <ul style="list-style-type: none"> a. <u>Level Cal.</u> b. WIDE c. Lights are: <ul style="list-style-type: none"> i. ON ii. ON iii. OFF iv. OFF 	S / U
---	---	-------

EVALUATION CHECKLIST

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
<p>8. (STEP 3.4.2 through 3.4.4) Verifies R-24AorB, R-25AorB, and R-35AorB operable using SOP-45.0 section 4.1.5.</p> <p>(uses pictures of LOCAL radiation monitor indications to determine the following conditions)</p> <p>a. Verify local switch for vacuum pump. b. Verify LOCAL switch position.</p> <p>(uses pictures of radiation monitor drawers to determine the following conditions)</p> <p>c. Verify MCR switch: i. Operation selector ii. Pump Power iii. Pump Start</p> <p>d. Verify MCR lights: i. Power light ii. Pump ON light iii. Flow fault light iv. Alert light v. High light vi. Fail/Reset light vii. Power on light</p>	<p>8) Identifies radiation monitors are operable; Initials step 3.4.2 through 3.4.4.</p> <p>The following indications are for all steps 3.4.2 through 3.4.4:</p> <p>a. AUTO b. ON (and Fans are running)</p> <p>c. MCR switches are: i. Oper ii. ON iii. Start/Neutral</p> <p>d. MCR lights are: i. ON ii. ON iii. OFF iv. OFF v. OFF vi. ON vii. ON</p>	S / U
<p>9. (STEP 3.5 through 3.6) Evaluates Refueling integrity has been verified within 100 hrs, and that step 3.6 is not applicable.</p>	<p>9) Utilizes initial conditions and evaluates that step 3.5 is satisfied and 3.6 in N/A.</p>	S / U

NOTE: REVIEW of completed Appendix 6 to evaluate the above elements.

CUE: Identify all, if any, initial conditions listed in UOP-4.1, Appendix 6 which are not satisfied.

- | | | |
|---|--|-------|
| * 10. Reports/annotates that step 3.2.2 and 3.4.1 are not completed or satisfied and that core Alts initial conditions are not satisfied. | 10) Identifies N32 inoperable, R-5 inoperable and that Core alterations should not be permitted since the initial conditions have not been satisfied. | S / U |
|---|--|-------|

EVALUATION CHECKLIST**ELEMENTS:****STANDARDS:****RESULTS:
(CIRCLE)**

RO ONLY: Terminate when elements 1-10 of the task have been completed.

SRO ONLY Cue: PROVIDE Handout #2, read and escort back to classroom to allow TS review.

Based on the conditions you identified perform the following:

- 1) List all TS CONDITIONS, REQUIRED ACTIONS and COMPLETION TIMES for LCOs not met, if any.

* 11. Evaluates TS 3.9.2 Condition C: Inoperable Audio Counts.	11) Identifies the need to IMMEDIATELY verify unborated water sources are isolated.	S / U
* 12. Evaluates TRM 13.3.4 condition B.	12) Identifies the need to IMMEDIATELY notify HP to perform a survey of the SFP area within 24 hours.	S / U
13. Evaluates TS 3.9.2 Condition A: One source range neutron flux monitor inoperable.	13) Identifies an ADMIN LCO for Condition A for N32 inoperable	S / U

SRO ONLY: Terminate when elements 1-13 of the task are complete.

____ **STOP TIME**

CRITICAL ELEMENTS: Critical Elements are denoted with an asterisk (*) before the element number.

Critical ELEMENT justification:**STEP****Evaluation**

NOTE: The listed sub-steps to each element (a.b.c...) describe the anticipated actions taken by the candidate. Completion of all sub steps is **not required** to make the determination of operability of the components, nor is it intended that these actions be observed. These sub-steps are provided for the examiner as an evaluation tool.

1. NOT critical—this step is for satisfying site procedural protocol and expectations.
2. NOT critical— this step is for satisfying site level expectations or requirements.
3. NOT critical—Although Task objective-component is operable.
4. **Critical Element** —Task objective-evaluate operability of required equipment.
5. NOT critical—Although Task objective-component is operable.
6. NOT critical — this step does not require any evaluation from the candidate.
7. **Critical Element** —Task objective-evaluate operability of required equipment.
8. NOT critical—Although Task objective-components are operable.
9. **Critical Element**—FINAL Task objective-identifies that initial conditions are not satisfied for Core Alts.
10. NOT critical— this step does not require any evaluation from the candidate.
- SRO **Critical Element**—IDENTIFIES and IMPLEMENTS the Actions for License requirement.
11. **Critical Element**—IDENTIFIES and IMPLEMENTS the Actions for License requirement.
- SRO **Critical Element**—IDENTIFIES and IMPLEMENTS the Actions for License requirement.
12. NOT critical—Administrative LCO is for tracking purposes only.
- SRO
- 13.

COMMENTS:

References expected to be utilized:

M-50 Master list of Surveillance Tests, Ver. 25.0; determine channel check procedure
SOP-39.0, Nuclear Instrumentation System, Ver. 9.0; evaluate switch alignment/operability
SOP-45.0, Radiation Monitoring System, Ver. 36.0; evaluate switch alignment/operability
TRM 13.3.4 Ver 8.0, and Basis Ver 3.0.
TS 3.9.2 and Basis, Amendment 146 (U-1), Amendment 137 (U-2)
UOP-4.1, CONTROLLING PROCEDURE FOR REFUELING, Ver. 52.0

TO DISCUSS with the examiner:

Due to procedure rules of usage, a candidate may stop performing the steps upon encountering the first malfunction; therefore the candidate may not have evaluated all components/steps expected.

Possible options:

- Brief all students verbally prior to providing the task or provide the following as part of the initial conditions:
For the purposes of this task, complete the Appendix in its entirety. Any actions, permissions or notifications required by any identified discrepancies, or procedure step, will be conducted upon completion of all other steps of the Appendix. Annotate any condition identified or the action, the permission, or the notification required for discussion upon completion of the appendix for any, if any, step that can not be completed.
- Facilitate with Cues at the evaluation phase to resolve the expected actions while monitoring the completion of the remaining elements.
- Facilitate with Cues at the evaluation phase then return the candidate to complete the remaining elements.

Consider element #13 relative to the criteria of NON-applicable LCO application resulting in Critical Element Failure. This element is listed based on the probability that this LCO would be entered if immediate evaluation of Gamma-Metrics capability to adequately monitor the core (possible that the fuel movement that existed prior to current condition uncoupled the core with the instruments); A Mandatory application of TS 3.9.2 Condition A may be implemented, due to decision to conservatively declare inoperable until the Refueling Coordinator is consulted.

- Gamma metrics must be evaluated as coupled by Refueling Coordinator.

CONDITIONS

Based on the conditions you identified evaluate TS and TRM requirements and perform the following:

- a. List all TS and TRM CONDITIONS, REQUIRED ACTIONS and COMPLETION TIMES for LCOs not met, if any.

CONDITIONS

When I tell you to begin, you are to perform or evaluate all steps FNP-1-UOP-4.1, Appendix 6, Verification of Initial Conditions Prior to Core Alterations. The conditions under which this task is to be performed are:

- a. Core Offload was suspended 18 hours ago.
- b. RCS temp is 100°F.
- c. Time to boil is >2 hours.
- d. A Fuel shuffle in the Spent Fuel Pool is ongoing.
- e. Communications between the MCR and a System Operator acting as the Cavity Watch have been verified available 10 minutes ago.
- f. RCS boron concentration is 2450 ppm following an over boration performed last shift.
- g. Rx Makeup water is being used to dilute the Reactor Cavity by chemistry's request.
- h. FNP-1-STP-18.4, Containment Midloop and/or Refueling Integrity Verification and Containment Closure, was completed yesterday at 1400.
- i. CTMT Main Purge system is in operation.
- j. The equipment hatch and all containment air locks are currently closed.
- k. The Ctmt Evacuation alarm is sounding inside Containment.
- l. The Audio Count Rate Channel is NOT producing any audible noises.
- m. Applicable equipment will be assessed using the provided photographs.
- n. You have been directed to perform or evaluate all steps of FNP-1-UOP-4.1, Appendix 6.
- o. Identify all initial conditions for core alterations listed in UOP-4.1, Appendix 6, which are not satisfied, if any.

APPENDIX 6

VERIFICATION OF INITIAL CONDITIONS PRIOR TO CORE ALTERATIONS

Performed by: _____ Date _____

Reviewed by: _____ Date _____

This appendix consists of 2 pages

APPENDIX 6

VERIFICATION OF INITIAL CONDITIONS
PRIOR TO CORE ALTERATIONS1.0 Purpose:

Provide separate guidance for specific initial conditions which will be needed to be verified more than once due to core alterations occurring at various time during an outage period.

2.0 Initial Conditions:

- _____ 2.1 The version of this appendix is the current version. (OR 1-98-498)
- _____ 2.2 This appendix is correct for the unit for which the task applies. (OR 1-98-498)

3.0 Instructions:

NOTE: This appendix should be completed each time core alterations are commenced, including suspensions of core alterations exceeding 12 hours.

- _____ 3.1 The direct communications system between the control room and the reactor
/ cavity is verified available for use within one hour prior to core alterations.

CAUTION: The Gamma-Metrics source range channel may only be used as a back-up to N-31 or N-32 during certain core configurations. The Refueling Coordinator should be consulted if N-31 or N-32 becomes inoperable when the core is not fully loaded.

- 3.2 Verify at least two of the required source range neutron flux monitors are operable with continuous visual indication in the Control Room and a channel check performed within 12 hours prior to any core alterations. Trip functions and associated TSLBs are not required for Mode 6 or core alterations.
- _____ 3.2.1 Source Range Nuclear Instrument, Channel N-31
- _____ 3.2.2 Source Range Nuclear Instrument, Channel N-32
- _____ 3.2.3 Gamma-Metrics Neutron Flux Monitor, Channel N-48

- _____ 3.3 The reactor coolant system boron concentration is ≥ 2000 ppm.
- 3.4 The following radiation monitors are in operation per FNP-1-SOP-45.0, RADIATION MONITORING SYSTEM, or required action is being taken per Tech. Specs 3.3.6, 3.3.7, and 3.3.8, and TR 13.3.4.
- _____ 3.4.1 R-5 Spent fuel storage or portable monitoring instrumentation used to monitor SFP area at least once per 24 hours (for fuel movement in SFP).
- _____ 3.4.2. R-25A or B Spent fuel storage – Gaseous (for fuel movement in SFP).
- _____ 3.4.3 R-24A or B - Containment purge system with main or mini purge in operation.
- _____ 3.4.4 R-35A or B - Control Room HVAC
- _____ 3.5 Refueling integrity has been verified per FNP-1-STP-18.4, CONTAINMENT
/ MIDLOOP AND/OR REFUELING INTEGRITY VERIFICATION AND
CONTAINMENT CLOSURE within 100 hours prior to the start of core alterations.
- 3.6 IF the containment equipment hatch, personnel air lock, or auxiliary air lock is open during core alterations and/or during movement of irradiated fuel assemblies within containment, THEN ensure the following items are complete (TS 3.9.3):
- _____ 3.6.1 A designated, trained Maintenance Closure Response Team (MCRT)
/ is available to shut the containment equipment hatch, a door in the
MM personnel air lock, and a door in the auxiliary air lock within two hours after notification and direction from the control room.
- _____ 3.6.2 For the equipment hatch, the surveillance is current for SR 3.9.3.3, i.e.,
/ FNP-0-STP-610.0 has been completed by Maintenance within the last seven days

A.1.2.S Conduct of Operations ADMIN G2.1.25 – SRO**A1.2.S**

TITLE: Conduct A Shutdown Safety Assessment and Determine Time to Saturation.

PROGRAM APPLICABLE: SOT ____ SOCT ____ OLT X LOCT ____ACCEPTABLE EVALUATION METHOD: X PERFORM ____ SIMULATE ____ DISCUSSEVALUATION LOCATION: ____ SIMULATOR ____ CONTROL ROOM X CLASSROOMPROJECTED TIME: 20 MIN SIMULATOR IC NUMBER: N/A

ALTERNATE PATH ____ TIME CRITICAL ____ PRA ____

JPM DIRECTIONS:

1. Initiation of task may be in group setting; evaluation performed individually upon completion of the task by reviewing the completed form.
2. Provide the examinee with the required materials to perform this JPM.
3. The actions of step 4.2 of the Appendix have been completed and information may be provided to examinee, if requested.

TASK STANDARD: Required for successful completion of this JPM:

- Correctly Assess Time to Saturation using TABLE A of UOP-4.0.
- Complete the Core Cooling section of a Shutdown Safety Assessment using Fig 1A of UOP-4.0.

Examinee:**Overall JPM Performance:** Satisfactory ☐ Unsatisfactory ☐**Evaluator Comments (attach additional sheets if necessary)**

EXAMINER: _____

Developer	H. Fitzwater	10/26/09
NRC Approval	SEE NUREG 1021 FORM ES-301-3	

CONDITIONS

When I tell you to begin, you are to **determine the time to saturation and prepare the CORE COOLING SECTION ONLY** of a shutdown safety assessment on Unit 1 per FNP-0-UOP-4.0, Appendix 1, step 4.3 and step 4.4. The conditions under which this task is to be performed are:

- a. Unit 1 is in a Refueling Outage, and has been shutdown for 120 hours.
- b. 1A SG wide range level is 74%; 1B SG wide range level is 75%; 1C SG wide range level is 10%.
- c. RCS temperature is 117°F.
- d. The SS has not permitted interpolation between data points.
- e. The RCS is at mid-loop with a FULL core.
- f. Both trains of RHR are in operation in the cooldown mode.
- g. Mid-loop integrity per STP-18.4 has been verified current.
- h. The IPC is not available.
- i. Another operator is evaluating the other SHUTDOWN SAFETY FUNCTION/CRITERIAS.
- j. You are directed to determine the time to saturation and prepare the CORE COOLING SECTION ONLY of a shutdown safety assessment on Unit 1 per FNP-0-UOP-4.0, Appendix 1, step 4.3 and step 4.4.

INITIATING CUE: "You may begin."

EVALUATION CHECKLIST

LINE 1: ≥ 2 SGs Avail with loops filled (Ref. step 2.7).- evaluate SG availability: <ul style="list-style-type: none"> • SG tubes filled and vented; considered filled and vented if RCS has remained ≥ 100 psig since last fill and vent. 	2) Zero (0) written on the line for item 1. <ul style="list-style-type: none"> ◦ Midloop \neq filled and vented and < 100 psig 	S / U
* 3. LINE 2: Cavity level $\geq 152' 9''$	3) Zero (0) written on the line for item 2.	S / U
* 4. LINE 3: RHR subsystems Available (0,1, or 2)	4) Two (2) written on the line for item 3.	S / U
* 5. LINE 4: RCS level $\geq 126' 6''$	5) Zero (0) written on the line for item 4.	S / U
* 6. LINE 5: Time to saturation > 30 minutes OR RCS press > 325 psig with at least one RCP available for operation and at least one SG available	6) Zero (0) written on the line for item 5.	S / U
7. Core Cooling Subtotal	7) Two (2) written on line for Core Cooling Subtotal.	S / U

NOTE: Since determination of the Core Cooling function is the critical element, and depending on the format of administering this JPM, the examinee may stop performing the Appendix upon discovering the ORANGE condition and may not complete element 8.

IF no condition circled for element 8 THEN provide the following CUE:
“What condition is Core Cooling in?”

- | | | |
|---------------------------------------|--|-------|
| * 8. Evaluates Core Cooling condition | 8) Circle around ORANGE condition for the Core Cooling Function
OR., if cued per NOTE
State the condition is ORANGE | S / U |
|---------------------------------------|--|-------|

Terminate when all elements of the task have been completed.

 STOP TIME

CRITICAL ELEMENTS: Critical Elements are denoted with an asterisk (*) before the element number.

GENERAL REFERENCES:

1. FNP-0-UOP-4.0, VER 36.0
2. KA: G2.1.25 RO 3.9 SRO 4.2

GENERAL TOOLS AND EQUIPMENT:

1. References to be accessed via classroom computer (using exam ID logon) and Exam Reference disk/files only.
2. Provide copy of FNP-0-UOP-4.0 Table A, Table B, Appendix 1
3. Pen/Pencil
4. Calculator (optional-not required to complete this task)

Critical ELEMENT justification:**STEP****Evaluation**

- | | |
|----|---|
| 1. | Critical - this is first of the two major objectives of the task. Utilization of the plant parameters and selection of the appropriate table are required to properly assess Shutdown Core Cooling function. |
| 2. | Critical - Each line item is critical to evaluate proper assessment of each parameter. |
| 3. | The aggregate effect of errors made within each line <i>could</i> result in obtaining the correct end point; therefore each sub-step must be evaluated to ensure examinee is correctly assessing the parameters. |
| 4. | |
| 5. | |
| 6. | |
| 7. | This is <u>NOT</u> a critical element since documentation of this summation is not procedurally driven nor will failure to complete this element necessarily impact the outcome. |
| 8. | Critical - This is the final objective of the task; proper assessment of this function is required to identify the need of mitigating actions necessary to ensure the health and safety of the public is not jeopardized. |

CONDITIONS

When I tell you to begin, you are to **determine the time to saturation and prepare the CORE COOLING SECTION ONLY of a shutdown safety assessment on Unit 1 per FNP-0-UOP-4.0, Appendix 1, step 4.3 and step 4.4.** The conditions under which this task is to be performed are:

- a. Unit 1 is in a Refueling Outage, and has been shutdown for 120 hours.
- b. 1A SG wide range level is 74%; 1B SG wide range level is 75%; 1C SG wide range level is 10%.
- c. RCS temperature is 117°F.
- d. The SS has not permitted interpolation between data points.
- e. The RCS is at mid-loop with a FULL core.
- f. Both trains of RHR are in operation in the cooldown mode.
- g. Mid-loop integrity per STP-18.4 has been verified current.
- h. The IPC is not available.
- i. Another operator is evaluating the other SHUTDOWN SAFETY FUNCTION/CRITERIAS.
- j. You are directed to determine the time to saturation and prepare the CORE COOLING SECTION ONLY of a shutdown safety assessment on Unit 1 per FNP-0-UOP-4.0, Appendix 1, step 4.3 and step 4.4.

TABLE A

Power-Upgraded Unit**Time To Saturation: Full Core****Assumed Initial Temperature = 100°F**

FARLEY NUCLEAR PLANT
SHARED
UNIT OPERATING PROCEDURE UOP-4.0
APPENDIX 1

1.0 Purpose

The purpose of the Shutdown Safety Assessment is to provide a means for evaluating the safety condition of the plant when in Modes 4, 5, 6 or de-fueled and to provide appropriate contingency actions. (CR 2004102447)

2.0 Definitions

- 2.1 Green Condition - The plant is fully capable of performing the associated safety function.
- 2.2 Yellow Condition - The plant's ability to perform the associated safety function is reduced but is at an acceptable level.
- 2.3 Orange Condition - The plant's ability to perform the associated safety function has been severely reduced and steps should be taken to minimize the amount of time in this condition.
- 2.4 Red Condition - The plant's ability to perform the associated safety function is in jeopardy and steps must be taken immediately to correct the cause of the condition.
- 2.5 Source Range Instrumentation Available - The audible count rate and at least one indication of source range counts (preferably NR-45) are available to indicate a dilution of the RCS.
- 2.6 RCS Intact Below the Vessel Flange - No opening exist which would result in spillage if the RCS level was raised to the vessel flange.
- 2.7 One or More SGs Available - A S/G is available to remove heat if the tubes are filled and vented, the wide range level is $\geq 75\%$, a steam flow path to the atmosphere can be made available with minor valve manipulations and a means of adding water to the S/G via the auxiliary feed water system exists. The S/G tubes are considered filled and vented if the RCS has been maintained greater than or equal to 100 psig since the last RCS fill and vent.
- 2.8 RHR Subsystems Available - The RHR system is capable of removing heat from the RCS.

- 2.9 One D/G Available - The selected D/G is capable of being started (either manually or automatically) and supplying 4160 V power to its respective bus.
- 2.10 Equipment Hatch & Airlocks Capable of Being Closed on Short Notice – The equipment hatch meets this definition when the MCRT is established. The personnel and aux airlocks meet this definition when a routine check of the hoses and cables going through the airlocks reveals that at least one door in each airlock can be closed in less than the current time to boil. (AI 2008207932)
- 2.11 HHSI Pump / Flow Path Available - A charging pump is capable of injecting water into the RCS from the RWST which contains > 50,000 gallons of water. Only minor valve manipulations are required.
- 2.12 LHSI Pump / Flow Path Available - A RHR pump is capable of injecting water into the RCS from the RWST which contains > 50,000 gallons of water. Only minor valve manipulations are required.
- 2.13 Based on the unit outage, boration flow paths via charging pumps and ECCS injection lines are determined using the guidance of Table 4 of FNP-1-STP-2.1 OR FNP-2-STP-2.1 , BORON INJECTION FLOW PATH VERIFICATION AND BORIC ACID TRANSFER PUMP OPERABILITY TEST, MODES 5 & 6 AND by a current FNP-1-STP-3.2 OR FNP-2-STP-3.2, BORATED WATER SOURCE OPERABILITY TEST MODE 5, 6.
- Additionally, Normal charging can be considered an available boration flow path under the following conditions:
- 2.13.1 Q1E21MOV8107 and Q1E21MOV8108 are open, OR
Q2E21MOV8107 and Q2E21MOV8108 are open.
- 2.13.2 With one of the following charging pump requirements met.
- 1A or 2A Charging Pump available
 - 1B Charging Pump Available with Q1E21MOV8132A and B open, OR
2B Charging Pump Available with Q2E21MOV8132A and B open
 - 1C Charging pump available with Q1E21MOV8132A and B open, OR
2C Charging pump available with Q2E21MOV8132A and B open

3.0 Precautions and Limitations

- 3.1 The Shift Supervisor will evaluate the affect of removing shutdown safety equipment from service. If proposed changes to the schedule appear to reflect a reduction in the key safety functions, refer the proposed changes to the Outage Manager for assessment per FNP-0-AP-94, OUTAGE NUCLEAR SAFETY, prior to implementing the changes.
- 3.2 The appropriate AOP-40 series procedure will be implemented upon unexpected entry into or discovery of the existence of a Red, Orange or Yellow condition.
- 3.3 Intentional entry into a red condition must be approved by the Plant Manager and documented per FNP-0-AP-94, OUTAGE NUCLEAR SAFETY. FNP's current position is that the plant will not be intentionally placed in this condition. Review FNP's commitment to NUMARC 91-06.
- 3.4 Intentional entry into an orange condition must be approved by the Outage Manager or his designee prior to entry into that condition and documented per FNP-0-AP-94.
- 3.5 Intentional entry into a yellow condition must be approved by the Shift Manager or Operations Superintendent prior to entry into that condition.
- 3.6 Notify the Outage Manager immediately if a red condition or an unexpected orange condition exists.

4.0 Instructions

NOTE: • The Shutdown Safety Assessment form may be a two-side copy.

- **The Shift Supervisor will ensure that the appropriate Shutdown Safety Assessment Form is completed at about 0200 and 1400 when in Mode 4, Mode 5, Mode 6 or defueled. (CR 2004102447)**

- 4.1 Obtain a copy of the appropriate Shutdown Safety Assessment form. For modes 5, 6, and defueled use Figure 1A and for mode 4 use Figure 1B.
- 4.2 Fill in the header information on the form.
 - Unit
 - Prepared By
 - Date
 - Time

- 4.3 IF in mode 5 or 6, THEN determine the time to saturation for existing plant conditions using the IPC (preferred) or FNP-0-UOP-4.0 Table A or B. Enter time on Figure 1A of Appendix 1.
- 4.4 Evaluate the criteria listed below each Shutdown Safety Function as follows.

NOTE: Refer to Definitions to assist in the evaluation as appropriate.

- 4.4.1 IF the reactor is defueled, THEN N/A the blanks for all Safety Functions except power availability and spent fuel cooling.
- 4.4.2 IF the criteria is met, THEN place a 1 in its blank or use the number/range of numbers listed in ().
- 4.4.3 IF the criteria is NOT met, THEN place a 0 in its blank.
- 4.4.4 For each individual Safety Function add up the numbers in the blanks and circle the condition corresponding to the subtotal.
- 4.5 IF an unexpected Red, Orange or Yellow condition is determined to exist, THEN implement the appropriate AOP-40 series procedure referenced on the Shutdown Safety Assessment form.
- 4.6 IF a yellow or orange condition exists that result in a single train available, THEN place a caution sign concerning equipment required for a safe shutdown condition at the applicable locations per the following:
- 4.6.1 Use Figure 2 to determine posting requirements.
- 4.6.2 Check the box on Figure 1A or 1B to indicate the review of the Figure 2 posting requirements {AI 2001203573}.
- 4.7 If a red, orange, or yellow condition currently exists for any Safety Function due to an intentional entry, verify
- 4.7.1 Appropriate approval per FNP-0-AP-94 has been obtained, and
- 4.7.2 Contingency Actions per Table 1 have been performed for the affected Shutdown Safety Functions.

4.8 Evaluate the activities planned for the next 12 hours to determine if the plant may potentially enter a red, orange, or yellow condition.

4.8.1 IF intentional entry into a red condition is expected THEN entry must be approved by the Nuclear Plant General Manager and documented per FNP-0-AP-94, OUTAGE NUCLEAR SAFETY. FNP's current position is that the plant will not be intentionally placed in this condition. Review FNP's commitment to NUMARC 91-06.

4.8.2 IF intentional entry into an orange condition is expected THEN

A. Entry must be approved by the Outage Manager or his designee prior to entry into that condition and documented per FNP-0-AP-94.

B. Perform the Contingency Actions in Table 2 for the affected Shutdown Safety Function(s).

4.8.3 IF intentional entry into a yellow condition is expected THEN

A. Entry must be approved by the Shift Manager or Operations Superintendent prior to entry into that condition and documented per FNP-0-AP-94.

B. Perform the Contingency Actions in Table 2 for the affected Shutdown Safety Function(s).

4.9 Post the Shutdown Safety Assessment at the following locations.

- Control Room
- Entrance to the PAP
- Entrance to the SAP (only required if SAP opened for protected area access)
- Outage Control Center

Figure 2

Yellow/Orange Condition Signs Required for Single Train Availability

1. IF required by step 4.6, THEN place caution signs at applicable location specified in Table 2 for Unit 1 or Table 3 for Unit 2.
2. Signs should be worded similar to the following:

____ TRAIN OUTAGE IN PROGRESS
NO WORK IS TO BE DONE ON THE ____ TRAIN
CALL EXT. ____

3. Complete Table 2 or 3 to document the review of posting requirements.
 - 3.1 Mark as N/A any components which are not required to be posted for the given yellow or orange condition.
 - 3.2 Post signs at the applicable locations and initial the appropriate block of Table 2 or 3.
 - 3.3 When the yellow/orange condition no longer exists, ensure the signs have been removed and initial the appropriate block of Table 2 or 3.

TABLE 1
Contingency Actions Required for Voluntary Entry to a Shutdown Safety Assessment
Orange or **Yellow** condition.

Reactivity **Orange** Condition Contingency Actions for Entry

1. Voluntary entry into a Reactivity **Orange** condition is not anticipated.

Reactivity **Yellow** Condition Contingency Actions for Entry

1. Verify Technical Specification and Technical Requirements Manual requirements are met and will continue to be met for boron concentration, boration flow path, and source range instrumentation.

TABLE 1
Contingency Actions Required for Voluntary Entry to a Shutdown Safety Assessment
Orange or Yellow condition.

Core Cooling **Orange** Condition Contingency Actions for Entry

NOTE: Voluntary entry into a core cooling **Orange** condition is not normally foreseen for evolutions other than Mid Loop Operations or other reduced inventory evolutions (e.g. drain down for reactor vessel head lift). Under certain plant conditions with time to saturation ≤ 30 min., an orange condition may be encountered.

1. IF Orange condition entry is being made as part of Mid Loop Operations, THEN ensure the requirements of FNP-1-UOP-4.3 OR FNP-2-UOP-4.3, MID LOOP OPERATIONS, have been met, including the Mid-Loop Compensatory measures in Appendix 3 of FNP-1-UOP-4.1 OR FNP-2-UOP-4.1, CONTROLLING PROCEDURE FOR REFUELING.
2. IF orange condition entry is due to certain plant conditions, with time to saturation ≤ 30 minutes, THEN ensure the contingency actions specified in the memo for compensatory measures for RCS level at the reactor vessel flange as required by Appendix 3 of FNP-1-UOP-4.1 OR FNP-2-UOP-4.1, CONTROLLING PROCEDURE FOR REFUELING, have been met. These same contingency actions are applicable for non-refueling outages when RCS level is at the reactor vessel flange in these conditions.

Core Cooling **Yellow** Condition Contingency Actions for Entry

1. Ensure both trains of RHR are operable if in Mode 6 prior to lowering refueling cavity level to < 23 feet (142'1") above the fuel.

TABLE 1
Contingency Actions Required for Voluntary Entry to a Shutdown Safety Assessment
Orange or Yellow condition.

Power Availability **Orange** Condition Contingency Actions For Entry

1. Verify RCS level $\geq 126' 6''$ prior to voluntary **Orange** condition entry.
2. Refer to Technical Specification 3.8.2.
3. Based on the unit outage, as a minimum, ensure the Unit 1 or Unit 2 F OR G 4160V Bus is maintained with:
 - An offsite power feed through its associated startup transformer.
 - Its associated DG(s) operable
 - An operable charging pump in the boration flow path
 - An operable BATP if a BATP is required as part of the boration flow path
 - An operable RWST TO CHG PUMP SUCT MOV if the RWST is part of the boration flow path
 - An operable RHR, CCW, and SW Pump
4. IF the head is on the reactor vessel, THEN at least one PRZR PORV is operable with backup nitrogen available for use in feed and spill cooling in the event that RHR is lost. Notify the Shift Manager, Alabama Control Center (ACC), or outside SO as appropriate to ensure that no work is in progress that could adversely affect the operable train of AC power and to ensure that no such work is started while this **Orange** condition exists.
5. Ensure that no work is in progress in the low voltage switchyard that could adversely affect the operable train of AC power.
6. Notify EM supervisory personnel of AC power conditions and requirements and direct their personnel (including appropriate Williams and EFS personnel) be briefed on these conditions and requirements.
7. Install Caution Tags or place barricades as appropriate to identify components such as ESF bus feeder breaker, DGs, DG output breakers and bus tie breakers, and startup transformer associated with the ESF bus to be maintained operable.

TABLE 1
Contingency Actions Required for Voluntary Entry to a Shutdown Safety Assessment
Orange or Yellow condition.

Power Availability **Yellow** Condition Contingency Actions For Entry

1. Verify RCS level $\geq 126' 6''$ prior to voluntary **Yellow** condition entry.
2. Refer to Technical Specification 3.8.2.
3. Based on the unit outage, as a minimum, ensure the Unit 1 or Unit 2 F OR G 4160V Bus is maintained with:
 - An offsite power feed through its associated startup transformer.
 - Its associated DG(s) operable
 - An operable charging pump in the boration flow path
 - An operable BATP if a BATP is required as part of the boration flow path
 - An operable RWST TO CHG PUMP SUCT MOV if the RWST is part of the boration flow path
 - An operable RHR, CCW, and SW Pump
4. IF the head is on the reactor vessel, THEN at least one PRZR PORV is operable with backup nitrogen available for use in feed and spill cooling in the event that RHR is lost.
5. Ensure that no work is in progress in the low voltage switchyard that could adversely affect the operable train of AC power.
6. Notify EM supervisory personnel of AC power conditions and requirements and direct their personnel (including appropriate Williams and EFS personnel) be briefed on these conditions and requirements.

TABLE 1
Contingency Actions Required for Voluntary Entry to a Shutdown Safety Assessment
Orange or **Yellow** condition.

Containment **Orange** Condition Contingency Actions For Entry

1. Verify no core alterations in progress or planned.
2. IF **Orange** condition entry is being made as part of Mid Loop Operations, THEN base on the unit outage ensure the requirements of FNP-1-UOP-4.3 OR FNP-2-UOP-4.3, MID LOOP OPERATIONS, have been met.

Containment **Yellow** Condition Contingency Actions For Entry

1. Not applicable.

TABLE 1
Contingency Actions Required for Voluntary Entry to a Shutdown Safety Assessment
Orange or Yellow condition.

Inventory **Orange** Condition Contingency Actions For Entry

1. Voluntary entry into an Inventory **Orange** condition is not anticipated.

Inventory **Yellow** Condition Contingency Actions For Entry

1. Ensure both trains of RHR are operable before reducing refueling cavity level to < 23 feet above fuel.
2. IF entry is due to Mid Loop Operations, THEN based on the unit outage, ensure the requirements of FNP-1-UOP-4.3 OR FNP-2-UOP-4.3, have been met.
3. Refer to applicable Technical Specifications before removing RHR or HHSI systems from service.

TABLE 1
Contingency Actions Required for Voluntary Entry to a Shutdown Safety Assessment
Orange or Yellow condition.

RCS Integrity **Orange** Condition Contingency Actions For Entry

1. IF entry is due to Mid Loop Operations, THEN based on the unit outage ensure the requirements of FNP-1-UOP-4.3 OR FNP-2-UOP-4.3, MID LOOP OPERATIONS, have been met.
2. WHEN SG cold leg manways are to be opened OR cold leg nozzle dams are to be removed, THEN verify that at least one hot leg manway, diaphragm, and nozzle dam has been previously removed.

RCS Integrity **Yellow** Condition Contingency Actions For Entry

1. IF entry is due to Mid Loop Operations, THEN based on the unit outage ensure the requirements of FNP-1-UOP-4.3 OR FNP-2-UOP-4.3, MID LOOP OPERATIONS, have been met.
2. WHEN SG cold leg manways are to be opened OR cold leg nozzle dams are to be removed, THEN verify that at least one hot leg manway, diaphragm, and nozzle dam has been previously removed.

TABLE 1
Contingency Actions Required for Voluntary Entry to a Shutdown Safety Assessment
Orange or **Yellow** condition.

Spent Fuel Cooling **Orange** Condition Contingency Actions for Entry

1. Voluntary entry into an **Orange** condition is not anticipated.

Spent Fuel Cooling **Yellow** Condition Contingency Actions for Entry

1. Verify that at least one train of SFP cooling and at least one makeup source are maintained operable.
2. Ensure that operating train SFP HX outlet temperature is being monitored every four hours on Rad Side SO logs.

TITLE: Perform A Shutdown Margin Calculation in modes 1 & 2.

PROGRAM APPLICABLE: SOT ____ SOCT ____ OLT X LOCT ____ACCEPTABLE EVALUATION METHOD: X PERFORM ____ SIMULATE ____ DISCUSSEVALUATION LOCATION: ____ SIMULATOR ____ CONTROL ROOM X CLASSROOMPROJECTED TIME: 30 MIN SIMULATOR IC NUMBER: N/A

ALTERNATE PATH ____ TIME CRITICAL ____ PRA ____

JPM DIRECTIONS:

1. Initiation of task may be in group setting; evaluation performed individually upon completion of the task by reviewing the completed form.
2. Provide the examinee with the required materials to perform this JPM.

TASK STANDARD:

- Perform a Shutdown Margin calculation while in Mode 1, using STP-29.5 accurately to within the acceptable ranges identified within each critical element's standard.
- Identify the need to emergency borate.

Examinee:
Overall JPM Performance: Satisfactory <input type="checkbox"/> Unsatisfactory <input type="checkbox"/>
Evaluator Comments (attach additional sheets if necessary)

EXAMINER: _____

Developer	H. Fitzwater	10/28/09
NRC Approval	SEE NUREG 1021 FORM ES-301-3	

CONDITIONS

When I tell you to begin, you are to **Determine the excess Shutdown Margin using STP-29.5, SHUTDOWN MARGIN CALCULATION IN MODES 1 AND 2 (TAVG \geq 547°F)**, for Unit 1. The conditions under which this task is to be performed are:

- a. Unit 1 is stable at 90% with the ramp on hold
- b. Bank D indicates 192 by Group Demand.
- c. Seven of the Bank D rods (H2, B8, H14, F6, F10, K10, K6) are at 192 steps by DRPI.
- d. Rod P8, in the D bank, has been determined to be stuck.
- e. Rod P8 is at 162 steps by DRPI.
- f. All other rods are at 229 steps.
- g. Core burnup is 9,800 MWD/MTU burnup.
- h. FNP-1-STP-29.5, SHUTDOWN MARGIN CALCULATION IN MODES 1 AND 2 (TAVG \geq 547°F), initial conditions are satisfied.
- i. The Shift Supervisor has directed you to complete FNP-1-STP-29.5 starting at step 5.1 and identify whether or not emergency boration is required.

INITIATING CUE: "You may begin."

EVALUATION CHECKLIST

ELEMENTS:

STANDARDS:

RESULTS:
(CIRCLE)____ **START TIME**

NOTE: Elements 1 through 13 are evaluated by comparing the completed Calculation page to the values and ranges of each element. The acceptable responses are **ALSO** listed on the calculation KEY.

1. **Step A.1: Document Core Burnup**1) Value entered: **9,800 MWD**

S / U

2. **Step A.2: Document Power Level**2) Value entered: **90 % entered**

S / U

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
3. Step A.3: Determine penalty steps for Banks below RIL.	3) Value entered: ZERO (0) (RNG: NONE)	S / U
a) Using COLR figure 1 determines RIL for 90% power level.	(a). Determines RIL from COLR <ul style="list-style-type: none"> • CB D/ RIL = 167 (165-170) from COLR. • CBC / RIL = FULL OUT (or 229). 	
b) Gathers data from Conditions page	(b). Documents given Demand positions <ul style="list-style-type: none"> • CB D/ Demand 192. • All others: Full out (or 229) 	
c) Determines penalty steps per bank.	(c). Calculates difference <ul style="list-style-type: none"> • All values: 0 (RNG: NONE) 	
* 4. Step A.4: Determine number of penalty steps for RODS below RIL	4) Value entered: 5 (RNG: 3-8)	S / U
a) Determines stuck rod in CBD, Determines CBD RIL.	(a). Determines RIL from COLR <ul style="list-style-type: none"> • P8 → CB D/ RIL = 167 (Range: 165-170) from COLR. 	
b) Documents given Data for rod P-8	(b). Documents given data <ul style="list-style-type: none"> i. Rod # → P8 @ 162 	
c) Calculates difference	(c). Calculates difference (RIL – DRPI) = 5 (RNG: 3-8)	
* 5. Step B.1: Determine Rod Worth for all control and shutdown bands at Zero steps using given power and burnup:	5) Value entered: 6268 pcm. (range: NONE)	S / U
a) Uses Curve 77 pg 1 for 90% power and 10000MWD		
6. Step B.2: Calculate penalty value of rod banks	6) Value entered of 0 (zero) pcm	S / U
* 7. Step B.3: Calculate penalty value of individual rods	7) Value entered of 50 pcm (range: 30-80)	S / U

	ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
*	8. Step B.4.a; Determine most reactive Rod worth	8) Value entered of 1406 pcm (range: NONE) (a). From Curve 77 pg 2 for \leq 10000MWD.	S / U
*	9. Step B.4.b; Calculate rod worth of stuck/untrippable rod	9) Value entered of 3515 (RNG: 3515- 3516) (a). # of stuck: 1 rod (b). B.4.a: 1406. (+1 / -0) value for various rounding technique effects)	S / U
*	10. Step B.5; Calculate penalized rod worth	10) Value entered of: (-) 2432.7 <i>NOTE: NEG (-) SIGN IS IMPORTANT FOR THIS CALCULATION/Evaluation</i> (RNG: (-)2403 to (-) 2451) Transpose data from other steps: (a). B.1: 6268 (b). B.2: 0 (c). B.3: 50 (d). B.4.b 3515. Calculate using equation.	S / U
*	11. Step B.6; Determine power defect for given conditions	11) Value entered of: 1634 pcm (RNG: NONE) (a). From Curve 78 for \leq 10000MWD.	S / U

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
* 12. Step B.8; Calculate available Shutdown Reactivity	12) Value entered of: (-) 748.7 (RNG: -718 to -767) <i>NOTE: NEG (-) SIGN IS IMPORTANT FOR THIS CALCULATION/Evaluation</i> (a). Transpose data: i. B.5: (-) 2432.7 ii. B.6: 1634 iii. Calculate	S / U
* 13. Step B.9; Calculate Excess Shutdown Margin	13) Value entered of: (+) 1021.3 (RNG: 1003 to 1051) <i>NOTE: POS (+) SIGN IS IMPORTANT FOR THIS CALCULATION/Evaluation</i> (a). Transpose data: i. B.8: (-) 748.7 ii. Calculate	S / U
<div style="border: 1px solid black; padding: 5px;"> NOTE: Element 15 is not required to be completed but is likely to be completed/initialed if initiated as a group/classroom setting. </div>		
* 14. Step B.10: Identifies Need to Emergency Borate	14) Notifies Shift Supervisor of need to Emergency Borate.	S / U
15. completes task: a) Signs and dates Calculation Sheet b) Initials step 5.1 c) Asks for verification of calculation	15) Completes sign off. (a). Signs and dates form (b). Initials step 5.1 of procedure.	S / U

TERMINATE After calculation of Excess Shutdown Margin AND element 14 completed.

____ STOP TIME

CRITICAL ELEMENTS: Critical Elements are denoted with an asterisk (*) before the element number.

Critical ELEMENT justification:**STEP****Evaluation**

- | | |
|------|--|
| 4-13 | CRITICAL - Calculation completion; each step is critical in accurately determining available SDM and Excess SDM. |
| 14 | CRITICAL - Task Objective; Identification that Acceptance Criteria NOT met and Emergency boration IS required to ensure corrective action is initiated and compliance with T.S. is restored. |

COMMENTS:

KEY

A. PRESENT CONDITIONS

A.1 Core Burnup MWD/MTU

A.2 Power Level. %

A.3 Determine number of penalty steps for ROD BANKS below RIL.
(Use COLR or convert the RIL computer reading from % to steps)

A.3.a Record data in table

ROD BANKS	BANK RIL HEIGHT	BANK DEMAND	STEPS BELOW RIL
CBA	FULL OUT	Full Out (229)	<input type="text" value="0"/>
CBB	FULL OUT	Full Out (229)	<input type="text" value="0"/>
CBC	Full Out(229)	Full Out (229)	<input type="text" value="0"/>
CBD	<input type="text" value="167 (166-170)"/>	192	<input type="text" value="0"/>
SDA	FULL OUT	Full Out (229)	<input type="text" value="0"/>
SDB	FULL OUT	Full Out (229)	<input type="text" value="0"/>

TOTAL STEPS BELOW RIL

RANGE for CBD RIL:

LO: Readability of COLR RIL curve may allow as low as 165 steps; although this is < than the curve limit of 166.9, if calculated. The assumptions within the curve development provides for this readability error.

HI: conservatism allowed by P&L 4.1 may be instituted and a value of up to 170 steps may be selected since the specific value between the Y-axis increments may not be calculated.

KEY

- A.4 Determine number of penalty steps for RODS below RIL which were not counted in A.3
(Rods below RIL on DRPI when the BANK demand is above RIL)
(Use COLR or convert the RIL computer reading from % to steps)

A.4.a Record data in table

ROD NUMBER	RIL POSITION	DRPI POSITION	DIFFERENCE
P8	167 (+3,-2)	162	5 (3-8)

TOTAL STEPS BELOW RIL

5
(RANGE 3-8)

B. SHUTDOWN MARGIN

**NOTE: Write the values from Curves 77 & 78 directly into the surveillance test.
The correct sign convention has been entered in the STP.**

- B.1 Rod worth for all control and shutdown banks at zero steps at

Present Burnup (A.1) and Power Level (A.2) .

(-) 6268 pcm
(Curve 77 Page 1)

- B.2 Penalty value of rod banks below insertion limit:

0 steps \times 75 pcm/step =
(A.3.a)

(+) 0 pcm

- B.3 Penalty value of individual rods below RIL which were not counted in A.3
(Rods below RIL on DRPI when the BANK demand is above RIL)

5
(RANGE 3-8) steps \times 10 pcm/step =
(A.4.a)

(+) 50 pcm
(RNG 30-80)

KEY

- B.4 Stuck / Untrippable Rod penalty:
(B.4.a is N/A and B.4.b is zero if there are no stuck/untrippable rods)

B.4.a Worth of most reactive rod worth at present burnup (A.1) (-) 1406 pcm
from Curve 77 pg. 2

B.4.b Calculate worth of Stuck/untrippable rods

$$\left[\frac{1}{(\# \text{ Stuck/} } \times (-) \frac{1406}{(\text{B.4.a})} \times 1.75 \right] + \left[(-) \frac{1406}{(\text{B.4.a})} \times 0.75 \right] = (-) \frac{3515}{\text{range: 3515 to 3516}}$$

$$\text{untrippable rods} \left[\frac{-2460.5 \text{ to } -2461}{[3515 \text{ OR } 3516]} + \left[\frac{-1054.5 \text{ to } -1055}{[3515 \text{ OR } 3516]} \right] =$$

- B.5 Penalized rod worth considering stuck/untrippable rods, misaligned rods, rods below the insertion limit, and uncertainty:

$$\left[(-) \frac{6268}{(\text{B.5})} + \frac{0}{(\text{B.5})} + \frac{50}{(30-80)} \right] \times (-) \frac{3515}{(+1, -0)} \times 0.9 = (-) \frac{2432.7}{\text{range: -2403 to -2451}} \text{ pcm}$$

$$\begin{aligned} &[-6268+80+3515] \times 0.9 = 2405.7 \\ &[-6268+80+3517] \times 0.9 = 2403.9 \text{ (Round down to 2403) } \times \text{LO} \\ &[-6268+30+3515] \times 0.9 = 2450.7 \text{ (Round up to 2451) } \times \text{(hi)} \\ &[-6268+30+3517] \times 0.9 = 2448.9 \end{aligned}$$

and Burnup (A.1)

(Curve 78).

$$(-) \frac{1634}{(\text{B.6})} \text{ pcm}$$

- B.7 Void Collapse Defect.

$$(+50) \text{ pcm}$$

- B.8 Available Shutdown Reactivity:

$$\left(\frac{-2432.7}{(\text{B.5})} - (-) \frac{1634}{(\text{B.6})} + \frac{50}{(\text{B.7})} \right) = (-) \frac{748.7}{\text{Range: -719 to -767.0}} \text{ pcm}$$

- B.9 Shutdown Margin in excess of required Shutdown Margin
(B.8 – Required SDM from the COLR):

$$\left(\frac{-748.7}{(\text{B.8})} \text{ pcm} - (-) \frac{1770}{\text{Required SDM from the COLR}} \text{ pcm} \right) = (+) \frac{1021.3}{\text{Range: 1003 to 1051}} \text{ pcm}$$

- B.10 If B.9 is positive, THEN emergency borate per FNP-1-AOP-27.0, EMERGENCY BORATION, to establish the required shutdown margin otherwise Shutdown Margin is adequate for the Present plant condition.

Emergency Boration IS required

May also state that a Rx trip may be warranted (P&L 4.3).

Notes:

- Rod worth data assumes the starting point is rods at the Rod Insertion Limit. If a bank is below the RIL, reduce the table value by 75 pcm for each step below the RIL.
- The rod worth data represents negative reactivity. However, STP-29.1, STP-29.2 and STP-29.5 have been written to handle the correct sign convention when the above data is entered as a positive number. Enter the above numbers directly into the STP.
- ARI-1** is defined as **All Rods In** -- less the most reactive rod. The SDM calculation requires that one rod be assumed stuck. Therefore, use the data directly from the table above when there are not any known stuck rods.

Notes:

- Rod worth data assumes the starting point is rods at the Rod Insertion Limit.
- The rod worth data represents negative reactivity. However, STP-29.1, STP-29.2 and STP-29.5 have been written to handle the correct sign convention when the above data is entered as a positive number. Enter the above numbers directly into the STP.
- ARI-1** is defined as **All Rods In** -- less the most reactive rod.
- For multiple stuck rods, the ARI-1 value on Page 1 of this curve should be reduced by the following calculation:

$$[KUR \times WSR \times 1.75] + [WSR \times 0.75]$$
 where KUR = Number of **known** untrippable rods (does not include rod **assumed** stuck in ARI-1 table)
 and WSR = Worst stuck rod (i.e. most reactive rod)

Figure 1
Rod Bank Insertion Limits versus Rated Thermal Power

KEY

Elements 4 & 5

Fully Withdrawn shall be the condition where control rods are at a position within the interval ≥ 225 and ≤ 231 steps withdrawn.

Note: The Rod Bank Insertion Limits are based on the control bank withdrawal sequence A, B, C, D and a control bank tip-to-tip distance of 128 steps.

CONDITIONS

When I tell you to begin, you are to **Determine if Shutdown Margin is adequate using STP-29.5, SHUTDOWN MARGIN CALCULATION IN MODES 1 AND 2 (TAVG \geq 547°F)**, for Unit 1. The conditions under which this task is to be performed are:

- a. Unit 1 is stable at 90% with the ramp on hold
- b. Bank D indicates 192 by Group Demand.
- c. Seven of the Bank D rods (H2, B8, H14, F6, F10, K10, K6) are at 192 steps by DRPI.
- d. Rod P8, in the D bank, has been determined to be Stuck.
- e. Rod P8 is at 162 steps by DRPI.
- f. All other rods are at 229 steps.
- g. Core burnup is 9,800 MWD/MTU burnup.
- h. FNP-1-STP-29.5, SHUTDOWN MARGIN CALCULATION IN MODES 1 AND 2 (TAVG \geq 547°F), initial conditions are satisfied.
- i. The Shift Supervisor has directed you to complete FNP-1-STP-29.5 starting at step 5.1 and identify whether or not emergency boration is required.

UNIT 1
SURVEILLANCE TEST PROCEDURE STP-29.5

SHUTDOWN MARGIN CALCULATION IN MODES 1 AND 2 ($T_{AVG} \geq 547^{\circ}\text{F}$)

1.0 Purpose

- 1.1 The purpose of this procedure is to verify that the SHUTDOWN MARGIN is greater than the limits of the Technical Requirements Manual TR 13.1.1 as directed by Technical Specifications in Modes 1 or 2:
- 1.1.1 One or more rod(s) untrippable (LCO 3.1.4),
 - 1.1.2 One or more rod(s) not aligned within 12 steps of their group step counter demand position (LCO 3.1.4),
 - 1.1.3 One or more shutdown banks not within insertion limits specified in the COLR (LCO 3.1.5),
 - 1.1.4 Control bank insertion, sequence, or overlap not within limits specified in the COLR (LCO 3.1.6). (This condition does not affect shutdown margin unless control banks are below insertion limits)

2.0 Acceptance Criteria

- 2.1 The Shutdown Margin shall be greater than or equal to the value specified in the COLR.

3.0 Initial Conditions

- | | | |
|------------|--|--|
| <u>HBF</u> | 3.1 The revision of this procedure has been verified to be the current revision and correct unit for the task. (OR 1-98-498) | |
| <u>HBF</u> | 3.2 $T_{AVG} \geq 547^{\circ}\text{F}$. | |
| <u>HBF</u> | 3.3 $T_{AVG} \pm 1^{\circ}\text{F}$ of programmed value. (Needed for Power Defect to be accurate) | |
| <u>HBF</u> | 3.4 The plant is in Mode 1 or 2 with $K_{eff} \geq 1$. | |
| <u>HBF</u> | 3.5 Technical Specifications required action entered to verify SDM to be within the limits provided in the COLR <u>OR</u> Shift Supervisor desires to perform. | |

4.0 Precautions and Limitations

- 4.1 Read all curves as accurately as possible OR most conservatively.
- 4.2 Observe proper algebraic sign notation throughout the calculation.
- 4.3 IF necessary to emergency borate due to inadequate shutdown margin, THEN consideration should be given to tripping the reactor and entering FNP-1-EEP-0, REACTOR TRIP OR SAFETY INJECTION concurrent with the emergency boration.

5.0 Instructions

NOTE: • For calculating shutdown margin at power, the amount of reactivity by which the reactor would be subcritical from its present condition must be determined. If the reactor were to shutdown instantaneously, the changes in reactivity would be from control rod position and power defect. In the instant that the reactor shut down, reactivity changes from xenon, samarium and boron concentration would be zero.

- _____ 5.1 Enter the information required on the attached calculation sheets and calculate the shutdown margin.

NOTE: • Verification of shutdown margin calculation by a licensed individual other than the test performer, should take place as soon as practical, and any differences resolved immediately.

- A Shift Foreman that serves as verifier of the calculation may also serve as reviewer on the Surveillance Test Review Sheet.

- _____ 5.2 Verify shutdown margin calculated in step 5.1.

6.0 References

- 6.1 Technical Specifications: LCOs 3.1.4, 3.1.5, & 3.1.6.
- 6.2 Technical Requirement Manual TR 13.1.1
- 6.3 Core Operating Limits Report (COLR).

SHUTDOWN MARGIN IN MODES 1 AND 2**A. PRESENT CONDITIONS**

A.1 Core Burnup _____ MWD/MTU

A.2 Power Level. _____ %

A.3 Determine number of penalty steps for ROD BANKS below RIL.
(Use COLR or convert the RIL computer reading from % to steps)

A.3.a Record data in table

ROD BANKS	BANK RIL HEIGHT	BANK DEMAND	STEPS BELOW RIL
CBA	FULL OUT		
CBB	FULL OUT		
CBC			
CBD			
SDA	FULL OUT		
SDB	FULL OUT		

TOTAL STEPS BELOW RIL

- A.4 Determine number of penalty steps for RODS below RIL which were not counted in A.3
(Rods below RIL on DRPI when the BANK demand is above RIL)
(Use COLR or convert the RIL computer reading from % to steps)

A.4.a Record data in table

ROD NUMBER	RIL POSITION	DRPI POSITION	DIFFERENCE

TOTAL STEPS BELOW RIL

B. SHUTDOWN MARGIN

**NOTE: Write the values from Curves 77 & 78 directly into the surveillance test.
The correct sign convention has been entered in the STP.**

- B.1 Rod worth for all control and shutdown banks at zero steps at

Present Burnup (A.1) and Power Level (A.2) .

(–) _____ pcm
(Curve 77 Page 1)

- B.2 Penalty value of rod banks below insertion limit:

_____ steps × 75 pcm/step =
(A.3.a)

(+) _____ pcm

- B.3 Penalty value of individual rods below RIL which were not counted in A.3
(Rods below RIL on DRPI when the BANK demand is above RIL)

_____ steps × 10 pcm/step =
(A.4.a)

(+) _____ pcm

B.4 Stuck / Untrippable Rod penalty:

(B.4.a is N/A and B.4.b is zero if there are no stuck/untrippable rods)

B.4.a Worth of most reactive rod worth at present burnup (A.1) $(-)$ _____ pcm
from Curve 77 pg. 2

B.4.b Calculate worth of Stuck/untrippable rods

$$\left[\frac{\text{_____}}{\text{(\# Stuck/ untrippable rods)}} \times (-) \frac{\text{_____}}{\text{(B.4.a) (Most reactive rod worth)}} \times 1.75 \right] + \left[(-) \frac{\text{_____}}{\text{(B.4.a) (Most reactive rod worth)}} \times 0.75 \right] = (-) \text{_____ pcm}$$

B.5 Penalized rod worth considering stuck/untrippable rods, misaligned rods, rods below the insertion limit, and uncertainty:

$$\left[(-) \frac{\text{_____}}{\text{(B.1)}} + \frac{\text{_____}}{\text{(B.2)}} + \frac{\text{_____}}{\text{(B.3)}} - (-) \frac{\text{_____}}{\text{(B.4.b)}} \right] \times 0.9 =$$

$() \text{_____ pcm}$

B.6 Power Defect at Power Level (A.2) and Burnup (A.1) (Curve 78).

 $(-)$ _____ pcm

B.7 Void Collapse Defect.

 $(+)$ 50 pcm

B.8 Available Shutdown Reactivity:

$$() \frac{\text{_____}}{\text{(B.5)}} - (-) \frac{\text{_____}}{\text{(B.6)}} + \frac{50}{\text{(B.7)}}$$

_____ pcm

B.9 Shutdown Margin in excess of required Shutdown Margin (B.8 – Required SDM from the COLR):

$$() \frac{\text{_____ pcm}}{\text{(B.8)}} - (-) \frac{1770 \text{ pcm}}{\text{Required SDM from the COLR}} =$$

$() \frac{\text{_____ pcm}}{\text{(SDM}_{\text{Excess}})}}$

B.10 If B.9 is positive, THEN emergency borate per FNP-1-AOP-27.0, EMERGENCY BORATION, to establish the required shutdown margin otherwise Shutdown Margin is adequate for the Present plant condition.

Notes:

- Rod worth data assumes the starting point is rods at the Rod Insertion Limit. If a bank is below the RIL, reduce the table value by 75 pcm for each step below the RIL.
- The rod worth data represents negative reactivity. However, STP-29.1, STP-29.2 and STP-29.5 have been written to handle the correct sign convention when the above data is entered as a positive number. Enter the above numbers directly into the STP.
- ARI-1** is defined as **All Rods In** -- less the most reactive rod. The SDM calculation requires that one rod be assumed stuck. Therefore, use the data directly from the table above when there are not any known stuck rods.

- ARI-1** is defined as **All Rods In** -- less the most reactive rod.
- For multiple stuck rods, the ARI-1 value on Page 1 of this curve should be reduced by the following calculation:

$$[KUR \times WSR \times 1.75] + [WSR \times 0.75]$$
 where KUR = Number of **known** untrippable rods (does not include rod **assumed** stuck in ARI-1 table)
 and WSR = Worst stuck rod (i.e. most reactive rod)

Figure 1
Rod Bank Insertion Limits versus Rated Thermal Power

Fully Withdrawn – 225 to 231 steps, inclusive

Fully Withdrawn shall be the condition where control rods are at a position within the interval ≥ 225 and ≤ 231 steps withdrawn.

Note: The Rod Bank Insertion Limits are based on the control bank withdrawal sequence A, B, C, D and a control bank tip-to-tip distance of 128 steps.

JPM DIRECTIONS:

1. Initiation of task may be in group setting, evaluation performed individually upon completion.
2. The references for this task will be provided as listed or the student may be provided a computer with a generic exam login and access to the EXAM reference disk.
3. Elements 1 through 7 may be evaluated by reviewing the responses on the Handout.

TASK STANDARD: Required for successful completion of this JPM:

- Calculate dose expected for Tasks 1 through 3
- Determine if a Repair team would exceed equipment protection emergency dose limits of EIP-14.0, Personnel Movement, Relocation, Re-Entry and Site Evacuation.
- Calculate the maximum allowable stay time for a task; or determine what tasks can be performed, if any, without exceeding limits.

CONDITIONS

When I tell you to begin, you are to **Calculate the Maximum Permissible Stay Time within Emergency Dose Limits**. The conditions under which this task is to be performed are:

- a. A General Emergency has been declared on Unit 1.
- b. 1A RHR pump is air bound and must be vented per AOP-12, Attachment 1, RHR Pump Venting.
- c. The TSC has requested that 1B RHR pump motor bearing oil levels be checked and filled as required after restoring 1A RHR and suggests using the same Repair team. The time required to perform this task is unknown, but is estimated to range between 1 to 20 minutes.
- d. You have been selected to perform the task.
- e. The tasks are provided in the table below, and estimated times and doses have been provided.
- f. Each task must be completed in the order listed.
- g. The Emergency Director (ED) directs you to perform the following with the information provided:
 - o Calculate the expected dose for tasks 1 through 3 and document in the table.
 - o Determine the tasks, if any, for which you could be permitted to perform without exceeding the equipment protection emergency dose limits of 10 REM.
 - If you will NOT exceed emergency dose limits prior to performing task 4, THEN calculate the maximum allowable stay time to complete task 4, and remain within the dose limits.
 - IF you WILL exceed emergency dose limits prior to performing task 4, THEN identify the last tasks (if any) that you can complete without exceeding dose limits.

Task #	Location/Task description	Time allowed/ req'd (minutes)	Dose Rate (R/hr)	Dose
1	83' 1A RHR Pump and HX rooms/ Vent rig installation and venting	30	5.31	
2	100' piping penetration room/ Vent rig installation and venting	15	19.75	
3	121' piping penetration room/ Vent rig installation and venting	20	5.65	
4	Inspect 1B RHR pump motor bearing oil levels and fill as required		7	

Can you perform all of the tasks? (Circle one) YES / NO

IF yes, then state the maximum permitted stay time for task #4. _____

IF no, then state the highest sequential task # that can be performed, if any. _____

INITIATING CUE: "You may begin."

COMMENTS:

IF Ted's year to date dose is used, the emergency dose limit will be exceeded and the expected response for element 2 is "NO" and highest task that can be completed is Task #3.

IF Joel's year to date dose is used and the Emergency dose is reduced by this value then the stay time will range from 0 mins to 1.1 mins.

IF emergency dose limit of 25 Rem Then Stay time will be excessive.

IF ADMIN dose limit of 2 REM used then NONE of the tasks can be performed, or Legal limit of 5 REM then Task #2 will be the highest.

CONDITIONS

When I tell you to begin, you are to **determine if exposure is within emergency dose limits of EIP-14.0, Personnel Movement, Relocation, Re-Entry and Site Evacuation**. The conditions under which this task is to be performed are:

- a. A General Emergency has been declared on Unit 1.
- b. 1A RHR pump is air bound and must be vented per AOP-12, Attachment 1, RHR Pump Venting.
- c. The TSC has requested that 1B RHR pump motor bearing oil levels be checked and filled as required after restoring 1A RHR and suggests using the same Repair team. The time required to perform this task is unknown, but is estimated to range between 1 to 20 minutes.

- g. Both operators are expected to receive equal dose for each job.
- h. The Emergency Director (ED) directs you to perform the following with the information provided:
 - Calculate the expected dose for tasks 1 through 3 and document in the table.
 - Determine the tasks, if any, for which the members of the team could be permitted to perform without exceeding the equipment protection emergency dose limits of EIP-14.0.
 - If any member of the team will NOT exceed emergency dose limits prior to performing task 4, THEN calculate the maximum allowable stay time to complete task 4, and remain within the dose limits.
 - IF any member of the team WILL exceed emergency dose limits prior to performing task 4, THEN identify the last tasks (if any) that the team can complete without either member exceeding dose limits.

Task #	Location/Task description	Time allowed/ req'd (minutes)	Dose Rate (R/hr)	Dose
1	83' 1A RHR Pump and HX rooms/ Vent rig installation and venting	30	5.31	
2	100' piping penetration room/ Vent rig installation and venting	15	19.75	
3	121' piping penetration room/ Vent rig installation and venting	20	5.65	
4	Inspect 1B RHR pump motor bearing oil levels and fill as required		7	

Year-to-date DOSE Records (REM TEDE)	
TED	1.26
JOEL	0.4

Can this team perform all of the tasks? (Circle one) YES / NO

IF yes, then state the maximum permitted stay time for task #4. _____

IF no, then state the highest sequential task # that can be performed, if any. _____

A.4.1.A Emergency Plan G2.4.14 – RO & SRO**CRO-362**

TITLE: Make Initial Notifications As Required for an Emergency

PROGRAM APPLICABLE: SOT ___ SOCT ___ OLT X LOCT XACCEPTABLE EVALUATION METHOD: X PERFORM X SIMULATEEVALUATION LOCATION: X ClassroomPROJECTED TIME: 20 MINTIME CRITICAL X***THIS JPM IS TIME CRITICAL*****JPM DIRECTIONS:**

1. This task will be done in the simulator area where the Southern Link phones can be accessed.
2. The Candidate will have 15 minutes from the start time to complete the initial notifications, and then time to activate the ERO call-out system.
3. The evaluator, upon commencement of the JPM, shall fill in data on the Guideline 1 handout then provide both EIP-9.0 Guideline 1 and EIP-8.3 table 2 to the candidate.

TASK STANDARD: Required for successful completion of this JPM:

- Complete the ERO callout system per EIP-8.3 Table 2.
- Initiate notification using the Emergency Notification Network (ENN) to at least ONE state agency within 15 mins.
- Complete EIP-9.0 Guideline 1, form actions beginning at Step O through step X.

Examinee:

Evaluator Comments (attach additional sheets if necessary)	

EXAMINER: _____

Developer	Howard Fitzwater	03/21/2010
NRC Approval	SEE NUREG 1021 FORM ES-301-3	

CONDITIONS

When I tell you to begin, you are to **make initial notifications as required for an emergency and activate the emergency callout system**. The conditions under which this task is to be performed are:

- a. A General Emergency has just been declared by the Shift Manager due to an event on Unit 1.
- b. The Shift Manager has handed you EIP-8.3, Table 2, and EIP-9.0, Guideline 1, GENERAL EMERGENCY RED INITIAL NOTIFICATION FORM.
- c. The Shift Manager has directed you to:
 - **PERFORM** the initial ENN notification over the Southern LINC ENN.
 - **USE** the SOUTHERN LINC and **actually perform** this function.
 - The SOUTHERN LINC will be selected to **WIDE AREA TRN ENN** on the display.
 - **ACTIVATE** the ERO callout system per EIP-8.3, Table 2.
 - **SIMULATE** the phone call. **DO NOT actually press any buttons on the telephone.**
 - If a FAX is required, **SIMULATE** transmitting the FAX. **DO NOT actually press any buttons on the FAX machine.**
- d. This JPM contains time critical elements.
- e. A pre-job brief is not required.

Read Notes prior to giving JPM to student – The Evaluator MUST enter the following Dates and Times on the Notification Form.

- **LINE 10 : “DECLARATION” TIME/DATE;** use time at which the JPM is started.
- **LINE 12: “Shutdown at Time” TIME/DATE;** use declaration time minus 10 minutes.
- **LINE 17: “APPROVAL Time/DATE”;** use time at which the JPM is started.

ALSO FILL IN AN APPROPRIATE TIME/DATE FOR AFFECTED UNIT SHUTDOWN.
EVALUATION CHECKLIST

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
_____ TIME CRITICAL ELEMENT and JPM START TIME		UP TO 15 MINUTES

- NOTE:
- Element 1 shall be simulated
 - The time it takes to complete element 2 through 3 is time critical and is required to be completed within 15 minutes of the declaration time which is the start time of the JPM.
 - Element 1 can be accomplished after the initial notification.

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
*1. Initiate the ERO callout system per EIP-8.3 Table 2 provided by the Shift Manager.	From any plant telephone dial the number specified on the table to contact the ERO callout system.	S / U
prompts that the system would provide: “Enter the scenario activation password, followed by the pound sign.” “you have entered (#entered). Is that correct? Enter 9 for yes, or 6 for no” “Enter the scenario activation number, followed by the pound sign.” “you have entered (#entered). Is that correct? Enter 9 for yes, or 6 for no” “press 3 to build the scenario” “the scenario is building”	When prompted, the SCENARIO ACTIVATION PASSWORD (123456789) and the SCENARIO ID (87246) from EIP-8.3 Table 2 is entered. When directed the three (3) key is pushed. (Cue. “The security tower called and indicated that their pager activated with 800-204-8196, and that the ERO callout system called and delivered message 3”).	S / U S / U
*2. Verify the Southern LINC ENN Radio being used is turned on	Red light on power supply is lit and radio is actually turned on.	S / U
CAUTION: • Ensure that no actual transmissions to emergency agencies occur. ○ WIDE AREA, TRN ENN should be used in lieu of “WIDE AREA, FEP ENN”		
*3. Initiate initial notifications using the Emergency Notification Network (ENN).	Press group pushbutton, verify display shows WIDE AREA, TRN ENN. An Instructor will be on the other Southern LINC ENN Radio. See below for student announcement.	S / U
Press PTT, wait for the chirp and announce “This is name/title at Farley Nuclear Plant. Please obtain a GENERAL EMERGENCY RED initial notification form and monitor the ENN.” Release the PTT pushbutton.		
_____ TIME CRITICAL ELEMENT STOP TIME	When the candidate presses the PTT pushbutton and says the above statement, the time will be recorded as the stop time.	

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
*4. Contact ONE Alabama State Agency.	Contact one of the Alabama State Agencies listed on Guideline 1 form. When the candidate asks for the first state agency in each category the instructor will say the following:	S / U
(CUE: "Alabama Radiation Control at Montgomery EOC acknowledges manning the ENN"). <u>When asked, the INSTRUCTOR will say, "John Brown is on the line."</u>		
*5. Contact ONE Georgia State Agency.	Contact with the Georgia State Agencies listed on Guideline 1 form is attempted until one agency acknowledges.	S / U
(CUE: "GEMA acknowledges manning the ENN, <u>Ed Stern is on the line.</u> ")		
*6. Contact Houston County.	Contacts Houston County per Guideline 1 form.	S / U
(CUE: "Houston County acknowledges manning the ENN, <u>Steve Smith is on the line.</u> ").		
*7. Contact Early County.	Contacts Early County per Guideline 1 form	S / U
(CUE: "Early County acknowledges manning the ENN, <u>Chuck Tew is on the line.</u> ").		
8. Fill in the date and time on line 2 using the time that the first state agency contact ATTEMPT was made.	The correct date and time are entered on the Guideline 1 form.	S / U
9. Conduct pre-message announcement.	Initial notification preparation message is read per Guideline 1 form, step U. See below:	S / U
"Please prepare to receive a GENERAL EMERGENCY, RED initial notification message with acknowledgment"		
*10. Slowly read initial notification message over the ENN.	Guideline 1 form read. The following is the REQUIRED minimum information to be read.	S / U
1 A DRILL Message # 001		S / U
2 A INITIAL		S / U
4 D General Emergency RG1		S / U
5 B Evacuate A B-5 C-5 J-5 K-5		S / U

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
D Advise Remainder of EPZ to Monitor Local Radio/TV Stations/ TARs for Additional Information and CONSIDER THE USE OF KI (POTASSIUM IODIDE) IN ACCORDANCE WITH STATE PLANS AND POLICY.		S / U
6 B is Occurring		S / U
7 C Above normal operating limits		S / U
8 B Stable		S / U
9 wind direction from <u>335</u> degrees wind speed <u>3.4</u> mph precipitation <u>none</u> stability class <u>E</u>		S / U
10 A declaration time _____ Date _____ Whatever is written		S / U
11 Affected unit(s) 1		S / U

#12 and 13 is not required to be read

17 approved by W.T. DOOR, Emergency Director, and read Time and Date		S / U
*11. Verify acknowledgment from Alabama Radiation Control at Montgomery EOC and GEMA.	Alabama Radiation Control at Montgomery EOC and GEMA questioned regarding receipt of initial notification message. (CUE: "Alabama Radiation Control at Montgomery EOC and GEMA acknowledge receipt of initial notification message").	S / U
*12. Verify acknowledgment from Houston County and Early County	Houston County and Early County questioned regarding receipt of initial notification message. (CUE: "Houston County and Early County acknowledge receipt of initial notification message").	S / U

The below action is to be simulated only.

13. Fax a copy of the Guideline 1 form to the state of Florida.	Guideline 1 form transmitted to Florida using speed dial button number 10. (CUE: "The fax machine sends the form to Florida").	S / U
---	--	-------

ELEMENTS:	STANDARDS:	RESULTS: (CIRCLE)
14. After receiving the fax report, Verify the state of Florida received the fax.	Contacts the State of Florida to confirm receipt of the Guideline 1 form (CUE: Florida acknowledges receipt of the form).	S / U

STOP TIME

Terminate JPM when initial notification message is faxed to Florida and the ERO callout has been accomplished.

CRITICAL ELEMENTS: Critical Elements are denoted with an Asterisk (*) preceding the element number.

SOUTHERN LINC Phone talker communication GUIDE**Give this to the Instructor performing phone talker duties**

#4 (CUE: “Alabama Radiation Control at Montgomery EOC acknowledges manning the ENN”).

When asked, the INSTRUCTOR will say, “**John Brown is on the line.**”

#5 (CUE: “GEMA acknowledges manning the ENN, **Ed Stern is on the line.**”)

#6 (CUE: “Houston County acknowledges manning the ENN, **Steve Smith is on the line.**”).

#7 (CUE: “Early County acknowledges manning the ENN, **Chuck Tew is on the line.**”).

#11 (CUE: “Alabama Radiation Control at Montgomery EOC and GEMA acknowledge receipt of initial notification message”).

#12 (CUE: “Houston County and Early County acknowledge receipt of initial notification message”).

#14 (CUE: Florida acknowledges receipt of the form).

When I tell you to begin, you are to **make initial notifications as required for an emergency and activate the emergency callout system**. The conditions under which this task is to be performed are:

- a. A General Emergency has just been declared by the Shift Manager due to an event on Unit 1.
- b. The Shift Manager has handed you EIP-8.3, Table 2, and EIP-9.0, Guideline 1, GENERAL EMERGENCY RED INITIAL NOTIFICATION FORM.
- c. The Shift Manager has directed you to:
 - **PERFORM** the initial ENN notification over the Southern LINC ENN.
 - **USE** the SOUTHERN LINC and **actually perform** this function.
 - The SOUTHERN LINC will be selected to **WIDE AREA TRN ENN** on the display.
 - **ACTIVATE** the ERO callout system per EIP-8.3, Table 2.
 - **SIMULATE** the phone call. **DO NOT actually press any buttons on the telephone.**
 - If a FAX is required, **SIMULATE** transmitting the FAX. **DO NOT actually press any buttons on the FAX machine.**
- d. This JPM contains time critical elements.
- e. A pre-job brief is not required.

INFORMATION FOR EMERGENCY RESPONSE NOTIFICATION SYSTEM ACTIVATION

1. Obtain the SCENARIO ACTIVATION PASSWORD and the SCENARIO IDENTIFICATION NUMBERS from the Unit 2 Shift Supervisor, the SAS Operator, or the Security Shift Foreman.

123456789

SCENARIO ACTIVATION PASSWORD: _____

2. Operations Shift Superintendent, Shift Supervisor (Emergency Director) determine the message to be sent from step 10.

Message Number: 3

87246

SCENARIO IDENTIFICATION NUMBER: _____

3. Call the Farley Emergency Callout System in Dothan at **9-702-2548** and follow the phone instructions to activate a scenario. If the Farley Emergency Callout System cannot be activated at this number then, go to step 9 to activate the backup system.
4. When the system requests it, input the SCENARIO ACTIVATION PASSWORD obtained in step 1 and the SCENARIO IDENTIFICATION NUMBER associated with the message number determined in step 2.
5. When directed press the three key on the phone to activate the scenario.
6. When the system informs you that the scenario is building hang up the phone.
7. If there was a problem activating the Farley Emergency Callout System then, go to step 9 to activate the backup system.
8. When the Farley Emergency Callout System or the backup activates, the following will occur:
 - 8.1 Emergency Response Organization pagers will be activated with the (800) number.
 - 8.2 The SFM in the SAS should call the Shift Clerk when the ERO pager activated.
 - 8.3 The system will call the Shift Clerk. The call from the SAS and this phone call allows verification that the system has activated.
 - 8.4 For eight to ten minutes, the system will accept calls from individuals that have called in from the pager activation.
 - 8.5 After eight to ten minutes the system will continue to accept inbound calls and will also call all of the individuals in the database that have not responded to the 800 number.
 - 8.6 As individuals call in or are called, they will have to identify themselves by entering their employee number, receive the message selected in step 2, respond if they are coming to the plant and enter the number of minutes if they are coming to the plant

- 8.7 Every 15 minutes for the duration of the callout, a printout will be sent to the Shift Clerks office and/or the fax machine in the TSC listing the people that have responded.
9. If the system has failed to activate, call the backup system at (800) 475-9705. Enter the company ID code of **1044** and proceed as described in steps 4 through 7.
10. If both systems have failed to activate, proceed to FNP-0-EIP-8.3, step 11, to manually callout the emergency response staff.
11. Message Numbers

Message 1 EMERGENCY CALL OUT **99911**
Scenario Identification Number: _____

THIS IS NOT A DRILL, I repeat THIS IS NOT A DRILL. This is a call-out of the Farley Emergency Response Organization due to a declared emergency. Respond to your Emergency Response Facility as quickly and safely as possible. THIS IS NOT A DRILL.

Message 2 SECURITY EVENT CALL OUT **54321**
Scenario Identification Number: _____

THIS IS NOT A DRILL, I repeat THIS IS NOT A DRILL. This is a call-out of the Farley Emergency Response Organization. An emergency has been declared at the plant due to a security event. If responding from off site, the TSC staff should respond to the Emergency News Center in Dothan as quickly and safely as possible. If you are currently on site, do not try to leave the plant or report to your emergency response facility. Follow the directions issued over the plant public address system. THIS IS NOT A DRILL

Message 3 DRILL CALL OUT **87246**
Scenario Identification Number: _____

THIS IS A DRILL, I repeat THIS IS A DRILL. This is a call-out of the Farley Emergency Response Organization due to a drill or exercise. Respond to your Emergency Response Facility as quickly and safely as possible. THIS IS A DRILL

Message 4 COMMUNICATIONS TEST **11199**
Scenario Identification Number: _____

THIS IS A DRILL, I repeat THIS IS A DRILL. This is a communication test of the Farley Emergency Response Organization. An emergency classification has not been declared. There is no required activation. Do not physically report to your designated Emergency Response Facility. This is a communication test only. THIS IS A DRILL.

NOTE: The information that is highlighted on this form must be correct for the notification to be considered correct.

A. ☒ Line 1 check box A or B. Select B only if it is an actual event in the plantB. ☒ Line 1 Number each verbal initial and follow-up messages sequentially starting at 001 for the first verbal message.C. ☒ Line 2 Notification time to be completed by ENN communicator just prior to making the ENN notificationD. ☒ Line 4 Enter the (one) highest emergency classification EAL number as listed in EIP-9.2 using the top down left to right method of evaluation. For example, if site criteria is met for EAL SA5 and FA1 simultaneously, FA1 should be listed on line 4.E. ☒ Line 5 Refer to NMP-EP-109, Protective Action Recommendations to determine appropriate Protective Action Recommendations (PARs). Mark box B or C and the appropriate zones for evacuation or sheltering. Box D is pre-marked. Mark and complete box E if PAR 4 is required or there are other PARS beyond NMP-EP-109.F. ☒ Line 6 An emergency release is occurring if an effluent monitor has increased by a factor of 10 over and above normal operating levels OR is in alarm. The effluent monitors are R-18, R-23B, R-15, R-14, R-22, R-60 (A,B,C,D) and R-29B(NG)

- Mark box A if no emergency release is in progress or has occurred
- Mark box B if an emergency release is in progress
- Mark box C if an emergency release has occurred, but is currently stopped

GUIDELINE 1
GENERAL EMERGENCY
RED VERBAL NOTIFICATION FORM

G. ☒ Line 7 Release Significance. Mark box A, B, C or D. Normal limits are being exceeded if an effluent monitor listed in step F above is in alarm

- Mark box A if 6A is marked
- Mark box B if 6B or 6C is marked and **NO** effluent monitor is or has been in alarm.
- Mark box C if 6B or 6C is marked and **ANY** effluent monitor is or has been in alarm.
- Mark box D if 6B or 6C is marked and it can not be determined if an effluent monitor is or has been in alarm.

H. ☒ Line 8 Event Prognosis. Mark box A, B or C.

- A should be marked if mitigation efforts appear successful , progressing toward termination/recovery.
- B should be marked if escalation to a higher classification is unlikely based on current conditions.
- C should be marked if escalation to a higher emergency classification or PAR change is likely.

I. ☒ Line 9 Meteorological Data

- Fill in the meteorological data required (35 foot elevation preferred).
- When possible use 15 minute average data, available from EP_WEATHER on the IPC.
- If EP_WEATHER. Is not available then use the guidance in FNP-0-EIP-9.3 Data Sheet 1 for obtaining meteorological data.
- If stability class is not available it can be calculated from delta temperature from the below table

ΔT (200' elev. temp, °F - 35' elev. temp, °F)	Stability Class
<-1.74	A
-1.74 to <-1.56	B
-1.56 to <-1.38	C
-1.38 to <-0.46	D
-0.46 to < 1.38	E
1.38 to 3.60	F
>3.60	G

J. ☒ Line 10 Time is for the declaration checked in line 4

K. ☒ Line 11 Mark the unit that is involved with the emergency declaration, or all if both units are affected.

L. ☒ Line 12 Fill in the per cent power or the time of shutdown for units involved with the event

M. ☒ Line 13 If additional remarks are required mark the box for additional remarks and write them on a separate paper and have them read over the ENN, or mark the box for no additional remarks

N. ☒ The Emergency Director must sign the form with time and date.

O. Within 15 minutes of declaration time, using the ENN contact the state and local agencies listed below.

P. Verify the Southern LINC ENN Radio being used is turned on

Q. If the Southern LINC display does not show "WIDE AREA, FEP ENN" when group is pressed in step R, THEN perform the following:

- Press the button with the square until the top line is indicated, then press the arrow buttons until "WIDE AREA" is displayed, then press the button under OK. Press the button with the square until the second line is indicated then press the arrow buttons until "FEP ENN" is displayed, and then press the button under OK.

R. Press group pushbutton, verify display shows WIDE AREA, FEP ENN. Correct per above step if necessary. Pickup handset or leave in cradle, press to talk (PTT), wait for the chirp and announce "This is name/title at Farley Nuclear Plant. Please obtain a GENERAL EMERGENCY RED initial notification form and monitor the ENN." Release the PTT.

S. Contact one state and county agency listed in each of the four boxes below.

Indicate the time of initial attempt to contact any Alabama agency. Circle agency actually contacted. Indicate the name of the individual contacted. Underlined phone numbers staffed 24 hours a day

PTT and request one Alabama agency in the order listed below acknowledge manning of the ENN. State agency name and ask if they are on the line. Release the PTT after each request.

ALABAMA State Agencies In preferred order

- Alabama Radiation Control at Montgomery EOC. ENN (1305), OPX (6628), (334-206-5391), (334-324-0076)
- AEMA ENN (1306), OPX(6619), (205-280-2312, 205-280-2310)
- Alabama Radiation Control at Alabama Forward EOC, ENN (1307), OPX 6621), (334-793-1565)
- HOUSTON COUNTY ENN (1307), OPX (6621), (334-794-9720, 793-9655, 677-4807, 4808)

Time _____ Name _____ Acknowledged _____
