

Mountain States Transmission Intertie (MSTI)

Under Major Facility Siting Act administrative rules, an applicant is required to submit to DEQ an application describing its proposed alignment and a minimum of two alternatives to construct a 500 kV electric transmission line. The following maps are being provided on an interim basis for members of the public to view detailed line location for NorthWestern Energy's proposed alignment and its two alternative locations. The alignments and siting considerations shown are based on data received from NorthWestern Energy's consultant and amended by the involved agencies.
