mfc2007means.csv

Ron,

The attached files MFCyyyyMEANS.CSV (yyy=2004-2008) contain hourly means of wind direction, wind speed, and temperature from the 10 meter and 76 meter levels of the tower at MFC. The files also contain the hourly standard deviation of wind direction for the two levels. Values do not appear if no data were available for an hour.

The first record in each file contains the variable names and the associated units (all metric). The station name 'EBR' in the headings refers to the old name for the MFC facility.
