Ms Pope,

I would like to have a short re-exit regarding the outside storage of totes at BSEP. The issue was identified during the on-site exit as an URI pending site review of records for 50.59 screening activities associated w/ the waste processing skid and observed storage activities. Following review of supplemental documents provided, the issue will now be identified as a minor violation. Minor violations do not go into the report but need to be discussed w/ responsible staff/management at an exit. Please let me know when yourself or others would be available to conduct this re-exit this week. My hours are flexible so just provide a short 15 minute window and we can conduct the appropriate follow-up exit discussions.

I can be reached at george.kuzo@nrc.gov or (404) 562-4658 (O) or (b)(6) *Exem 6* C Thanks in advance.

Subject: BNP URI Totes

The totes containing radioactive liquids (mop water, etc.) that were being stored on the North West side of the plant have been removed. I tried to contact you through your office number, but was unable to leave you a voice mail. Lee Grzeck will be back in the office on Monday and he will touch base with you. Thanks.

Annette H. Pope
