IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Jenkinsville Water Company (202001) has Levels of Uranium above the Maximum Contaminant Level (MCL)

Our water system recently violated a MCL. Although this is not an emergency, as our customers you have a right to know what happened, what you should do, and what we are doing to correct this situation.

We are routinely monitored for the presence of drinking water contaminants. Testing results we received show that our system exceeds the standards, or MCL for Uranium. The MCL for Uranium is 30 micrograms per liter. The average level of uranium over the last year was 33.4 micrograms per liter.

What should I do?

You do not need to use an alternative source of water. However if you have specific health concerns, consult your doctor.

What does this mean?

This is not an immediate risk. If it had been you would have been notified immediately. However, some people who drink water containing uranium in excess of the MCL over many years may have an increased risk of getting cancer and kidney toxicity.

What happened? What is being done?

In June of 2010, DHEC found uranium exceeded the MCL levels in well #10. We are discontinuing the use of Well #10. We are currently drilling a new test well on Clowney Road to replace Well #10.

For more information please contact Gregrey Ginyard at 803-718-6184 or by visiting us at 12924 State Highway 213, Jenkinsville, South Carolina.

This notice is being sent to you by Jenkinsville Water Company (202001).

Date distributed June 21, 2010.
