Attachments: Annual Radioactive Effluent Release Report

I do not believe any substantial releases have occurred. Attached are the last two annual reports for your review (2007, 2008). In 2009, an inconsequential spill of approximately 10 gallons from the "moat" area surrounding the Refueling Water Storage Tank occurred.

Subject: Sequoyah - Supplement Briefing Book for TVA Drop-In

Please provide the following information:

- Any challenges regarding tritium production at Sequoyah
- Any recent inadvertent releases of radioactive material at Sequoyah

I appreciate your help. Thank you.
