Mr. Baber,

Attached please find two maps of red cockaded woodpecker trees on the southern half of Goethe State Forest, and a google earth file showing cluster locations and names.

The maps are dated January 2010 to indicate they are current through the 2009 nesting and fledging season. The nearest cluster to the proposed construction site, Cluster 52, is abandoned. Clusters 53, 87, 88, 89, 90, and 91 were used in the 2009 translocation program. Clusters 53, 89 and 90 were used to house birds translocated from Osceola National Forest in October 2009. As of January, these three clusters were still active.
