Simulator Scenario Outline Comments (2/19/2010)		
	Comment	Resolution
1	Scenario 1 – Replace event 2 with a TS failure	Event 2 has no safety significance. Will be replaced.

		This event was replaced.
2	Scenario 2 – Can LPRM be bypassed in simulator? Remove 5 minutes from event 5. Does event 7 include BPV's? If so, lower initial power to 70%.	Will replace with a BOP TS event. Looking at inadvertent auto start of RCIC Will remove the 5 minute delay so that it is examiner initiated. Based on validation, events 3 and 4 were replaced. The 5 minute time delay was removed.
3	Scenario 3 – What BOP actions for event 5? What is the operational impact of event 3?	Looks like a spare
4	Scenario 4 – What are the BOP actions on event 4? Make sure it is ok to raise power	Will add another BOP event. Event 6 was added to the scenario.
