Subject: FPL's proposed nuclear plant expansion

Dear Members of the NRC,

I recall in the days of my youth the chants of "no nukes", the movie The China Syndrome, Three Mile Island, and Chernobyl. In those days, I would argue that nuclear energy should not be a part of how America meets the demands for power/energy from her citizens.

Times have changed, however, since those days decades ago. If built properly, a nuclear energy plant is a clean, safe, and efficient way for our energy needs to be met - or at least lower the need for fossil fuels to meet our needs.

I am not a nuclear scientist, but my understanding at this time is that the main concern regarding nuclear energy is how to safely store the waste material. If there is a scientific answer to this problem that is safe, I think America would be wise to pursue increasing our use of nuclear energy.

Thank you for your consideration,

Kenneth Bass
