

~~Non-Sensitive - Not for Public Disclosure~~

EDO Daily Notes - Region II Input 6/01/07

- On May 31, Progress Energy notified its employees and is expected to make informal notification to North Carolina state agencies about recently identified levels of tritium onsite at the Brunswick plant. All the tritium detected is on plant property. The licensee developed and has begun implementation of an action plan to monitor and evaluate the extent and/or potential for movement of tritium from onsite to groundwater. The licensee does not plan to make a press release or a 50.72 notification, however, they are prepared to respond to questions, and will issue a press release or notification if there is sufficient media interest. Region II does not plan to issue a press release, but may issue a Preliminary Notification regarding this matter on June 1, 2007.
