

**APPENDIX C. Gamma Spectroscopy, ICP-MS, and XRF, XRD Sample
Results and QA Results**

Table 7. Gamma spectroscopy analytical results for Mn-54, Co-57, Zn-65, Sr-85, Ru-106, Ce-139, and Cs-137.

Table 13. Gamma analyses quality assurance results.

Explanation and overview of QA results for gamma analyses: The QA standards contained the peak energies of seven isotopes; the peak energies spanned the gamma energy range of interest. These were measured each working day prior to the start of any sample analyzes. The 48 QA analyses, each reporting the peak energies of seven isotopes are presented here. A mark in the QA results in the “Deviation/Flags” column of “In” means the measured value needs to be “investigated”, but the instrument is within specifications of the standard. A “Deviation/Flags” comment of “Ac” means the measured value is outside the acceptable range and “action” is required. The “action” flag indicates that the analyses results are unacceptable. From these 48 QA analyses, there were a total of 336 isotopes standards reported, of which five “investigate” flags and zero “action” flags were identified. Since the five “investigate” flags were not three back-to-back days on the same instrument, no action was required. Together, these QA results indicate that all measurement were within specifications.
