Lou,

I will discuss your request with Farhad on Friday morning and will get back to you no later than Monday. We will definitely do all that we can to support the region with the CR-3 containment delamination issue, I just need to discuss your request with Farhad before I give you an answer. Also, pls. let me know the level of effort required... are you requesting part-time or full-time support of Farhad for the entire month of January? Also, pls advise if you are requesting that he travel back and forth to the site; I believe the preference would be that the analyses be sent to HQs for review.

Thanks,  
Meena

I am requesting the assistance of Farhad Farzam during the month of January 2010. Discussions with George Thomas indicate that there will be a significant increase in the number of design basis analysis that will become available after the holidays and will require an expeditious review in support of the completion of the SIT charter. Therefore I am requesting Mr. Farzam be assigned to the Crystal River SIT during this period.

Lou Lake
