Hi Marvin,

Please find below one of the papers circulating the GBG office re: Crystal River. I now understand that Dr. Mallett doesn't have all the papers that John Monninger, Chairman's office referred to, but Dr. Mallett did indicate that if one googles "3D containment concrete delamination" one will get most of the papers that are circulating the Chairman's office. For example the India paper you mentioned, one on ageing management, etc.)

Also, I wanted to share some thoughts Bruce shared with us. He mentioned it would be appropriate to include some kind of language in the special inspection charter regarding the how we will look at this generically. He also mentioned some language on what are the programmatic impacts of the issue, for example, ageing management, license renewal. He doesn't specifically want to use the words license renewal, but to include something programmatic.

I'm working from home and can be reached at (b)(6)

*etl*

Thank you.  
Diana

Please see SMiRT paper (<http://www.iasmirt.org/SMiRT16/H1454.PDF>) on prestressing causing delamination. Note references to 2 un-named US plants.

John has some other ones.

**Subject:** Meeting with the Chairman

Hans,

This is to confirm a meeting with the Chairman tomorrow at 11am in his office to discuss, in general, delamination of containment domes, or other types of degradation. The purpose is to provide him with background information concerning containment degradation in advance of his previously planned trip to Crystal River on Friday. No preparation or presentation specific to this issue at Crystal River is necessary other than what you already know.

Please note we may ask you to come up at 10:30am if his schedule opens up. You are welcome to bring additional people, but please let Glenda Evans or myself know in advance.

Thanks,

Tom
