Gentlemen;

Re: Proposed Nuclear Reactors in Southern Florida

I read a disturbing article in the "Free Press," (a newspaper servicing Homestead and the Florida Keys) the other day and immediately telephoned your office. Your assistant, Lourdes, took my call and very respectfully listened to my "side" of the issue and this was very appreciated and certainly the direction we like to see our government going into in this new, "enlightened" 21st Century.

No Nuclear Reactors - This is not the kind of "green" and "enlightened" direction our government should even consider - as the oil spill represents - where the government turned its head and allowed Big Business to think of profits before safety.

This is no different - Big Business FPL is encouraging our government to turn its head to the disasters that are imminent in the future with nuclear power plants.

To add insult to injury, these 2 "dangerous" nuclear plants are proposed to be over/around the only natural aquifer we have that provides clean water to millions of people!

The article mentioned that the nuclear plants rely almost 50% on natural gas - my question to you, Mayor, is why not go in the more "green" direction of "natural gas" for all future energy needs - which is abundant and cheap - I believe we are not even considering other alternatives because of the following:

Big Business, FPL, and its well-trodden path of making the American people more and more electricity-, dependent (prices never going down or stabilizing to benefit the American people, even though FPL grows bigger and bigger every year) - and then - influencing our government by threatening loss of jobs = two ways coercing the American people/government into "feeding" this greedy monster AND IS NOT THE WAY TO GO IN THE 21ST CENTURY.

Regarding the coercing of the American people and our government by suggesting that thousands of jobs would be lost if the nuclear plants were not constructed, I propose the following "green" outlook:

If, for instance, your office, Mayor, turned its back on FPL and our government refused to allow this typical example of Big Business 20th Century greed and inconsideration for the American people, and decided that America needs to be more "self-sufficient" and its individual homes more self-efficient - I can promise you with millions of homes proceeding in this Green Direction, thousands if not millions of jobs would be created by:

Independent American-home generators  
Independent American-home solar panels  
Independent American-home, cistern-like water supplies

Thereby creating endless jobs in manufacturing, sales, installations, maintenances, repairs, and so many "other" job-related ramifications therewith - making Americans more dependent upon each other rather than big business and the world for our needs, and more importantly, moving in the right "green" direction to protect this planet from any further exploitation by big business.

As far as fossil fuels are concerned:  
It is not the fossil fuels that have caused so many problems, it is Big Business Greed that has gotten out of control and must be stopped in the 21st Century.  
It is unacceptable to even think of disposing highly toxic and radioactive substances anywhere on or in our beautiful Earth as we do not know the consequences - and there is nothing to "stopgap" or "in place" in case these substances have a dire reaction on the earth - this is what happened in the case of the BP oil spill that had devastating consequences on the Earth - nothing was "in place" in case of such a disaster.  
Our government "turned its head" in favor of big business and bowed to the "threat" of oil shortages when it did not insist on stopgaps and other methods of securing any oil spills so deep in the ocean floor.

Any time people turn their backs on abuses of any kind, circumstances always get worse - hasn't history taught us that, yet?

Pleas STOP THIS DISASTEROUS AND GREEDY EXPANSION OF ELECTRIC COMPANIES AND OTHER BIG BUSINESSES SET ON 21ST CENTURY ABUSE OF OUR PLANET.

Our government must not turn its back - and should immediately go in the "green" direction - so that Americans, and especially our children, can look back with pride on the governmental leaders with this kind of foresight that protected the earth for future generations instead of allowing greed to continue its destructive pattern.

Thank you for your time and consideration to this my opinion on this matter.

Please advise me, if possible, or any future meetings with regard to this matter as I would certainly like to express my concerns, above stated.
