Subject: recycling radioactive metals

Dear NRC people

Do not proceed further with your industrial complex-motivated plan to recycle radioactive metals into our American or any other marketplace. How could you? How could you even begin such an inhumane, greedy, co-opted and downright un-American scheme? We strongly register against this policy and practice of yours. Instead, at least isolate the poisoned metals, or send them into the Sun.

By the way, we are curious about something: Where will you (or anyone else) get safe spoons for your own grandchildren to eat with? Cars to ride in? Computers to use? Medical equipment to treat your loved ones? Will you have your own factories to produce nonradioactive metal products for members of the NRC and their families?

Joel and Doris Diamond
