Radiation Safety Officer
P.O. Box 1536
Morgan City, Louisiana 70381

SUBJECT: LICENSE AMENDMENT

Please find enclosed Amendment No. 02 to License No. 17-29308-01. **This amendment incorporates your revised operating and emergency procedures and expands your authorization to include offshore and lay-barge radiography, and source retrieval operations. This amendment also establishes maximum possession limits in conditions 8.A. through 8.F., and license condition 10.**

Please note that this license does not authorize the possession of cobalt-60 sealed sources in Gamma Industries Model Tattle Tale 1 and Model Master Minder 1 since there are no sealed source and device registration certificates allowing the use of cobalt-60 sealed sources in these devices. If you are able to produce these certificates, submit a license amendment request to the NRC for review and approval.

Please note that this license does not authorize the possession of iridium-192 sealed sources in C.S. Products M70 Gamma Head Model CS 0516 since there is no sealed source and device registration certificate allowing the use of iridium-192 sealed sources in this device. If you are able to produce this certificate, submit a license amendment request to the NRC for review and approval.

An environmental assessment for this licensing action is not required, since this action is categorically excluded under 10 CFR 51.22(c)(14)(vi). You should review this license carefully and be sure that you understand all conditions. You can contact me at (817) 860-8189 if you have any questions about this license.

NRC's Regulatory Issue Summary (RIS) 2005-31, provides criteria to identify security-related sensitive information and guidance for handling and marking of such documents. This ensures that potentially sensitive information is not made publicly available through ADAMS. The RIS may be located on the NRC Web site at: <http://www.nrc.gov/reading-rm/doc-collections/gen-comm/reg-issues/2005/>. Pursuant to NRC's RIS 2005-31, the enclosed materials license will not be made publicly available.

NRC expects licensees to conduct their programs with meticulous attention to detail and a high standard of compliance. Because of the serious consequences to employees and the public that can result from failure to comply with NRC requirements, you must conduct your radiation safety program according to the conditions of your NRC license, representations made in your license application, and NRC regulations. In particular, note that you must:

1. Operate by NRC regulations 10 CFR Part 19, "Notices, Instructions and Reports to Workers: Inspection and Investigations," 10 CFR Part 20, "Standards for Protection Against Radiation," and other applicable regulations.
2. Submit annual exposure reports as required by 10 CFR 20.2206 on or before April 30 of each year. The licensee shall submit the report to the REIRS Project Manager by an appropriate method listed in § 20.1007 or via the REIRS Web site at <http://www.reirs.com>. Please note that this website also provides software for reporting and electronic tools to verify the submitted exposure reports, electronically. I am currently verifying with Ms. Doris Lewis, NRC Project Manager for REIRS, as to the submittal of the exposure data for employees who work in Agreement State jurisdiction and NRC jurisdiction during the same monitoring period. I will provide follow-up correspondence in writing regarding the agency's position on exposure records for these activities.
3. In accordance with 10 CFR 30.36(d), notify NRC, promptly, in writing within 60 days, and request termination of the license:
 - a. When you decide to terminate all activities involving materials authorized under the license whether at the entire site or any separate building or outdoor area;
 - b. If you decide not to acquire or possess and use authorized material; or
 - c. When no principal activities under the license have been conducted for a period of 24 months.
4. Request and obtain a license amendment before you:
 - a. Change Radiation Safety Officers;
 - b. Order byproduct material in excess of the amount, radionuclide or form authorized on the license;
 - c. Add or change the areas or address(es) of use identified in the license application or on the license; or
 - d. Change the name or ownership of your organization.
5. Submit a complete renewal application or termination request at least 30 days before the expiration date on your license. You will receive a reminder notice approximately 90 days before the expiration date. Possession of radioactive material after your license expires is a violation of NRC regulations.

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this letter will be available electronically for public inspection in the NRC Public Document Room or from the NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html>.

Thank you for your cooperation.

Sincerely,

/RA/
