SUBJECT: SUMMARY OF THE JULY 27, 2010, MEETING WITH DOMINION  
VIRGINIA POWER REGARDING THE NORTH ANNA UNIT 3  
COMBINED LICENSE APPLICATION ENVIRONMENTAL REPORT,  
REVISION 3

On July 27, 2010, the U.S. Nuclear Regulatory Commission (NRC) staff held a meeting with representatives from Dominion Virginia Power (Dominion) to discuss the revised environmental report recently submitted to account for the change in Dominion's combined license (COL) application to reference the US-APWR reactor design. This meeting was held at NRC Headquarters in conjunction with a related meeting held concurrently to discuss the entire COL application revision. The agenda for the meeting on the environmental report is provided as Enclosure 1 and a list of attendees is included as Enclosure 2.

Dominion staff briefly reviewed all of the revisions in the environmental report. Dominion also described the process they used to identify what information previously provided to the NRC would be affected by the change in technology. This process appeared to be similar to the one used to identify new and significant information in their original COL application concerning resolved issues from the Early Site Permit review. NRC staff explained that the agency was evaluating options associated with conducting further environmental analyses related to Dominion's COL revisions.

This was a Category 1 public meeting. The associated meeting notice is available in the Agencywide Documents Access and Management System under accession number ML101940509. The handout from Dominion's presentation is located under accession number ML102240125.

Docket No.: 52-017

Enclosures:  
As stated
