September 9, 2010

Mr. William E. Bonzer, Reactor Manager Missouri University of Science and Technology Nuclear Reactor Facility 1870 Miner Circle Rolla, MO 65409-0630

SUBJECT: MISSOURI UNIVERSITY OF SCIENCE AND TECHNOLOGY - NRC ROUTINE INSPECTION REPORT NO.: 50-123/2010-201

Dear Mr. Bonzer:

On August 16-19, 2010, the U.S. Nuclear Regulatory Commission (NRC, the Commission) conducted an inspection at your Nuclear Reactor Facility (Inspection Report No. 50-123/2010-201). The enclosed report documents the inspection results, which were discussed on August 19, 2010 with you and members of your staff.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations of activities in progress. Based on the results of this inspection, no safety concerns or non-compliances with NRC requirements were identified. No response to this letter is required.

In accordance with Title 10 of the *Code of Federal Regulations* 2.390, "Public inspections, exemptions, and requests for withholding," a copy of this letter and its enclosure will be available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (Agencywide Documents Access and Management System (ADAMS)). ADAMS is accessible from the NRC Web site at (the Public Electronic Reading Room) <u>http://www.nrc.gov/reading-rm/adams.html</u>.

If you have any questions concerning this inspection, please contact Mike Morlang at 301-415-4092 or <u>Gary.Morlang@nrc.gov</u>.

Sincerely,

/RA by Gregory M. Schoenebeck Acting For/ Johnny H. Eads, Jr. Chief

Research and Test Reactors Oversight Branch Division of Policy and Rulemaking Office of Nuclear Reactor Regulation

EXECUTIVE SUMMARY

Missouri University of Science and Technology Report No.: 50-123/2010-201

The primary focus of this routine, announced inspection of facility operations was the onsite review of selected aspects of the Missouri University of Science and Technology (MSTR, the licensee's) Class II research reactor facility safety programs including organization and staffing; procedures; experiments; health physics; effluents and environmental monitoring; design changes; committees, audits, and reviews; and transportation. The licensee's programs were acceptably directed toward the protection of public health and safety, and in compliance with U. S. Nuclear Regulatory Commission (NRC) requirements.

Organization and Staffing

• The licensee's organization and staffing were in compliance with Technical Specifications.

Procedures

• Written procedures were being maintained in accordance with Technical Specification requirements.

Experiments

• Reactor experiments were being performed in accordance with the requirements of the Technical Specifications.

Health Physics

• The licensee maintained an effective radiation protection program in compliance with regulatory and Technical Specification requirements, resulting in low radiation exposures to facility workers and users.

Effluents and Environmental Monitoring

• The licensee evaluated annual environmental releases as required by Technical Specifications and reported results well below limits.

Design Changes

• The licensee maintained a procedure to process facility changes in accordance with regulatory requirements but had not made such a change since the previous inspection.

Committees, Audit and Reviews

• The Radiation Safety Committee continued to perform independent oversight in accordance with Technical Specification requirements.

Transportation

• The licensee did not ship any radioactive material under the R-79 license since the previous transportation inspection.

REPORT DETAILS

Summary of Plant Status

The Missouri University of Science and Technology (MSTR, the licensee's) 200 kW pool-type research reactor continues to be operated in support of graduate and undergraduate instruction, laboratory experiments, reactor operator training, and various forms of research. During the inspection, the reactor was started-up, operated, and shut down.

1. Organization and Staffing

a. Inspection Scope (IP 69001)

The inspector reviewed the following reactor operations records to ensure compliance with the requirements of technical specification (TS):

- Reactor Console Logbook #16, from May 21, 2009 to present
- Reactor Safety Committee (RSC) Meeting Minutes for 2009 and 2010
- MSTR Standard Operating Procedure (SOP) SOP-102, Pre-Startup Checklist, Revised (Rev.) March 5, 2009, October 8, 2008 to present
- MSTR SOP-105, Reactor Shutdown Checklist, Rev. April 14, 1998
- MSTR SOP-107, Permanent Hourly Logs and Operational Data, Rev. January 3, 2008, January 9,2009 to present
- MSTR Annual Progress Report for 2008/2009 and 2009/2010
- Technical Specifications Section 6
- b. <u>Observations and Findings</u>

Reactor operations were carried out following written procedures and TS requirements. A review of the logs and records indicated that TS shift staffing was as required. The inspector observed the licensee complete the pre-startup checklist, startup the reactor to 1000 watts and shutdown the reactor.

c. Conclusion

Shift staffing was being maintained in accordance with TS Section 6.

2. Procedures

a. Inspection Scope (IP 69001)

The inspector reviewed the following to ensure that procedures were in accordance with TS Section 6.3 requirements:

- MSTR SOP-101, General Operations Procedure dated November 19, 2009
- MSTR SOP-102, Startup Checklist dated March 5, 2009
- MSTR SOP-103, Reactor Startup to Low Power dated December 30, 2009
- MSTR SOP-104 Reactor Power Changes and Stable Operations dated February 28, 1996
- MSTR SOP-105, Reactor Shutdown and Securing dated February 28, 1996
- MSTR SOP-100, Preamble dated September 10, 2009

b. Observations and Findings

TS Section 6.3, Operating Procedures, required that operating procedures be maintained for specific topic areas. It also specified a means for making minor and substantive changes to procedures. The inspector found that all specified topics were addressed by existing procedures.

The inspector noted many hand-written changes to procedures and also that many procedures had been revised and rewritten in the last year.

c. <u>Conclusion</u>

Procedures were as required by TS and being reviewed and updated as required.

3. Experiments

a. Inspection Scope (IP 69001)

The inspector reviewed the following to ensure that the requirements of TS Sections 3.7 and 4.7, Experiments, and Section 6.4, Experiment Review and Approval, were being met concerning experiments:

- File of Completed Irradiation Request Forms (IRF) for 2009 and 2010
- Permanent Reactor Logbook #16, May 21, 2009 to present
- SOP 702, Irradiation Request Forms (IRF), Rev. April 10, 1995

Pursuant to SOP 702, each IRF required review and approval by two individuals from among the following: a Senior Reactor Operator (SRO), the Director, and the Health Physicist (HP). If the IRF was determined to involve a new safety issue, review by the Radiation Safety Committee (RSC) was required. Once an experiment was authorized it could be repeated indefinitely as long as an SRO found the sample to be in compliance with the authorization.

When conducting irradiations of experiments for the first time, the licensee used a graded approach to the irradiation. Experiments were initially conducted at low power levels and checked for expected radiation levels. Once levels were verified as expected, the power level was raised to the desired exposure.

c. Conclusion

The licensee was complying with the TS requirements pertaining to experiment authorization and irradiation.

4. Health Physics

a. <u>Inspection Scope (IP 69001)</u>

The following documents were reviewed to determine compliance with Title 10 of the *Code of Federal Regulations* (10 CFR) Parts 19 and 20 and with TS Sections 3.6.1 and 4.6.1, Radiation Monitoring Systems, requirements regarding radiation protection:

- Handbook of Radiological Operations
- 2009 and 2010 Monthly Reactor Audit file
- 2009 and 2010 Reactor Dosimetry file
- 2009 and 2010 Reactor Sump Water Analysis File
- 2009 and 2010 Monthly Contamination Survey file
- 2009 and 2010 Monthly Radiation Survey file
- 2009 and 2010 Quarterly As Low As Reasonably Achievable (ALARA) Reports
- 2009 and 2010 Reactor Pool Water Analysis file
- 2009 and 2010 Reactor Pool Water Tritium file
- 2009 and 2010 Monthly HP Audit Reports
- 2009 to present Radiation Work Permit file
- 2009 and 2010 Portable Survey Instrument Calibration Reports
- 2009 and 2010 Argon-41 Monthly Release Forms

Through the review of procedures and records, observations during facility tours, and discussion with staff personnel, the inspector assessed the licensee's radiation protection program, including radiation protection training given to individuals.

The licensee maintained and adhered to written procedures and instructions for all aspects of the radiation safety program. During tours through the facility the inspector verified that warning signs and postings for radiation workers were in accordance with regulations and procedures. Protective clothing was available if needed but areas were maintained in a clean condition such that it was very rarely required.

The inspector reviewed the radiation monitoring instrumentation calibration program. Most survey instruments were calibrated using an in-house calibration facility. Permanently mounted process monitors were calibrated in-situ. High range ion chambers and neutron detectors were sent offsite for calibration. In all cases calibration stickers were used to record the valid calibration interval; all devices inspected throughout the facility were found to be within their defined calibration interval.

Workers and visitors were observed wearing appropriate dosimetry throughout the facility. Routine radiation surveys, smear samples, and fixed monitor readings were taken throughout the facility to verify that radiation exposure rates were known and maintained As Low As Reasonably Achievable (ALARA). The licensee maintained well organized files which contributed to good tracking of performance.

The overall effectiveness of the radiation protection program was monitored with Optically Stimulated Luminescence Devices (OSLD) worn by workers.

c. Conclusion

The radiation protection program was effective and in compliance with Technical Specifications and regulatory requirements

5. Effluents and Environmental Monitoring

a. Inspection Scope (IP 69001-02.07.e, f, and q)

The following documents were reviewed to determine compliance with 10 CFR Part 20 and with TS Sections 3.6.2 and 4.6.2, Radioactive Effluents:

- Annual Progress Report, University of Missouri Rolla Nuclear Reactor Facility, 2008-2009
- Argon-41 Release file

- Annual Progress Report, University of Missouri Rolla Nuclear Reactor Facility, 2009-2010
- Environmental Dosimetry files for 2009 and 2010
- 2009 and 2010 Air Release file
- 2009 and 2010 Byproduct Release file
- 2009 and 2010 Air Release Summary file

b. <u>Observations and Findings</u>

The licensee analyzed air samples collected over the reactor pool surface to evaluate exposure to personnel in the reactor bay from Argon-41 and also samples collected at 1 of 3 exhaust fans to evaluate exposure to the public. Results showed compliance with 10 CFR Part 20 limits.

The licensee maintained good reactor water quality through pre-processing potable campus water used to make up for evaporative losses and continuous clean-up of circulating reactor pool water. Filters and resins from the pool clean-up system were collected as radioactive waste but activity levels were minimal. Likewise, a small quantity of laboratory waste (vials, absorbent paper, gloves, etc.) was collected in the reactor building consisting of very little activity.

c. <u>Conclusion</u>

The licensee evaluated annual environmental releases as required by TS and reported results well below limits.

6. Design Changes

a. Inspection Scope (IP 69001-02.08)

The inspector reviewed the following to ensure that the requirements of 10 CFR 50.59 were being implemented effectively:

- RSC Meeting Minutes file for 2009 and 2010
- Annual Progress Report, University of Missouri Rolla Nuclear Reactor Facility, 2008-2009
- Annual Progress Report, University of Missouri Rolla Nuclear Reactor Facility, 2008-2009
- SOP 310, Facility Modifications, Rev. April 28, 1997

b. <u>Observations and Findings</u>

The licensee reported that no changes were made since the previous inspection that required a 10 CFR 50.59 review. The licensee was in the process of constructing a second pneumatic transfer system for sample irradiations. The licensee indicated that a 10 CFR 50.59 review would be conducted and submitted to the RSC when the construction was complete.

c. <u>Conclusion</u>

The licensee maintained a procedure to process facility changes in accordance with regulatory requirements but had not made such a change since the previous inspection.

7. Committees, Audits and Reviews

a. Inspection Scope (IP 69001-02.09)

The inspector reviewed the following to ensure that the requirements of TS Section 6.2, Review and Audit, were being implemented effectively:

- RSC Meeting Minutes file for 2009 and 2010
- Monthly Health Physics Audits for 2009 and 2010
- Annual Procedural Audits for 2009 by the Reactor Director

b. Observations and Findings

The licensee used a single independent oversight safety committee to fill requirements for both the reactor license and the campus byproduct material license. The committee members were appointed by the Vice Chancellor - Administrative Services, providing a reporting chain to the Chancellor that was fully independent of the reactor operations line of reporting. Meetings were conducted quarterly but only required annually by TS Section 6.2.2. The Reactor Manager briefed the committee each quarter on matters relating to reactor safety.

c. Conclusion

The RSC continued to perform independent oversight in accordance with Technical Specification requirements.

8. Transportation

- a. Inspection Scope (IP 86740)
 - 2009 Radioactive Material Receipts file
 - 2009 and 2010 Radioactive Material Shipments file
- b. <u>Observations and Findings</u>

The inspector reviewed the file for radioactive shipments made under the reactor license (R-79) and found that there were no shipments made since the previous transportation inspection.

c. <u>Conclusion</u>

The licensee did not ship any radioactive material under the R-79 license since the previous transportation inspection.

9. Exit Interview

The inspector met with members of licensee staff and management in an exit briefing on August 19, 2010. The inspector summarized the areas inspected and presented preliminary inspection findings. The licensee did not present any dissenting comments or identify any proprietary information at the briefing.
