September 8, 2010

United States Nuclear Regulatory Commission  
Document Control Desk  
Washington, DC 20555

Dear Commissioners:

**Subject: Salem Generating Station Units 1 and 2  
Docket Nos. 50-272 and 50-311  
License Amendment Request S10-01  
Application for Technical Specification Change Regarding Risk-Informed  
Justification for the Relocation of Specific Surveillance Frequency Requirements  
to a Licensee Controlled Program**

PSEG Nuclear LLC submitted the proposed change to the Salem Technical Specifications by letter to the Nuclear Regulatory Commission dated March 23, 2010. This proposed change would modify the Salem Technical Specifications by relocating specific surveillance frequencies to a licensee controlled program with the implementation of Nuclear Energy Institute 04-10, "Risk-Informed Technical Specification Initiative 5b, Risk-Informed Method for Control of Surveillance Frequencies."

The New Jersey Department of Environmental Protection's Bureau of Nuclear Engineering has no comments on the proposed change. If you need to discuss this subject further, please contact Elliot Rosenfeld at (609) 984-7548.

Sincerely,

Patrick Mulligan, Manager  
Bureau of Nuclear Engineering
