Conference Call for the Fermi 3 COL Environmental Review

Monday, September 13, 2010, 2:00 PM Eastern Time

Purpose

To discuss the status of RAIs and other items related to the Fermi 3 COL Environmental Review

Participants

U.S. Nuclear Regulatory Commission (NRC): Bruce Olson, Dan Mussatti, John Fringer

U.S. Army Corps of Engineers (USACE): Colette Luff

Argonne National Laboratory (Argonne): Kirk LaGory, Ron Kolpa

Detroit Edison: Randall Westmoreland, Chris Becker

Summary of Discussions and Associated Action Items

The summary of discussions during the conference call is presented below. Action items are identified below as **[ACTION ITEM]**.

RAIs

- AQ2.7-1 and AQ 4.4.1-1. Argonne reviewed the calculation package in the reading room, and needed clarification of the number of trips used as the basis for the analysis of offsite emissions. Detroit Edison agreed to provide greater justification and documentation of the basis for the average number of trips/day used in the calculation of offsite travel emissions. This information has not yet been placed in the reading room for Argonne to review, but will be in the near future **[ACTION ITEM]**. Argonne requested the spreadsheet used to make the calculations to allow a more thorough check. Detroit Edison agreed to upload the spreadsheet to the reading room website, if there were no compatibility issues. This has not yet been done, but will be in the near future **[ACTION ITEM]**.
- There are some inconsistencies in the acreage of different habitat types as presented in the ER, and with the acreage of different habitats along the undeveloped 10.8 mi corridor. Revised information will be provided in the near future **[ACTION ITEM]**.
- TE4.3.1-9. In preparing the draft EIS, the terrestrial ecology subject matter expert determined that the response to this RAI did not include any description of how impacts to the fox snake associated with vehicle collisions (road kill) would be mitigated during construction and operations. Detroit Edison will consider possible ways to mitigate this impact and develop a response **[ACTION ITEM]**.
- NO4.4.1-1 and NO4.4.1-2. Argonne needs a construction daily schedule or a description of noise generating activities at night to determine nighttime noise impacts. Detroit Edison will provide a description of daily schedule and night-time activities or measures taken to reduce night-time noise **[ACTION ITEM]**.

Figures

- Argonne is working with Detroit Edison to resolve figure issues. More than half of the problematic figures have been revised/updated by Detroit Edison and the remaining updates should be done within two weeks **[ACTION ITEM]**.

Section 404 Permitting

- USACE1 and 2. Luff indicated that she will work on reviewing and commenting on the RAI responses this week. She anticipates being able to prepare and send a letter with the RAI feedback by September 24, 2010 **[ACTION ITEM]**.
- The USACE has not yet completed their jurisdictional determination. Luff indicated that the delineation would be completed and transmitted to Detroit Edison by October 1, 2010 **[ACTION ITEM]**.
- Detroit Edison is moving forward with their onsite alternatives analysis required by the US Army COE. Completion of this analysis is anticipated by the end of October or mid-November **[ACTION ITEM]**.
- Once Detroit Edison completes their onsite alternative analysis, they will set up a meeting with the USACE and MDNRE **[ACTION ITEM]**.
- Once there is agreement on the analysis, a mitigation strategy for wetland impacts will be developed **[ACTION ITEM]**. That strategy will be fleshed out as part of the 404 permit process. Feedback from the Michigan DNRE or USACE could result in some changes from the strategy currently presented in the EIS draft. Detroit Edison is uncertain about the full scope and nature of those required changes.

Section 106

- The Section 106 submittal form for the Fermi 1 decommissioning is being updated (ML101790146) and will be submitted by NRC to the SHPO in the near future. The Fermi 3 submittal (ML101820297) is receiving a final review and will be sent at the same time or shortly after the Fermi 1 package. Olson will follow up with the SHPO once both packages have been submitted **[ACTION ITEM]**.

Need for Power

There was a brief discussion of the need for power analysis. The following summarizes that discussion.

- Detroit Edison has not completed a Certificate of Need. Although there has been a decision to obtain a license and any necessary permits, Detroit Edison has not decided to actually build the plant.
- It is not known if there has been a revision to the Michigan 21st Century Plan. Westmoreland will check to see if a revision has been published **[ACTION ITEM]**.
- Argonne would like to include several figures from the ER and from DTE Energy's website in the EIS. All figures in the ER should be available for publishing without permission, but Detroit Edison will review figures and provide permission if needed. Argonne will provide a list of figures for which copyright permission is needed **[ACTION ITEM]**.

Future Calls Planned

- The next call will be on Monday, September 20 at 2:00 PM ET. Topics will include status of figures, new responses to RAIs, and status of USACE determinations. This will be the second call open to the public.
