Subject: Telephone call with Carl Fricker

In preparation for 2:30 phone call:

Carl's phone number: (b)(6)] Exemption 6

Safety related systems with buried piping:
The three safety related systems with buried piping are auxiliary feedwater, service water, and control air.

Talking points for Carl Fricker Phone Call:

1. To complete a timely review of the need for a reactive inspection related to the AFW piping degradation we need to understand the basis for PSEG's past operability determination for the Unit 1 AFW system.
2. What are PSEG's plans for additional extent of condition reviews for the three safety-related systems with buried piping at Unit 1 and 2 (AFW, SW and control air and Hope Creek)?
3. Is PSEG planning any additional analysis on the Uhit 1 piping that will be replaced after it is removed?
