Re: Amendment to NRC License No. 21-01492-02

Dear Madam or Sir:

We are requesting the following actions as an amendment to our Materials License 21-01492-02:

Item #1: TRANSFER OF CONTROL / LICENSE TERMINATION

We wish to request a "Transfer of Control" of the NRC Materials License 21-26703-01, presently issued to Valley Cardiology, P.C. to our Materials License 21-01492-02. This should be followed by the termination of Materials License 21-26703-01. The reason for this simultaneous request is to prevent any disruption of clinical practice or patient care.

In support of this request we have enclosed the documentation required by Appendix G of NUREG-1556, Volume 9, Revision 2.

Item #2: ADD ADDRESS OF USE

We wish to add the following address of use presently under the NRC Materials license 21-26703-01; known as Valley Cardiology, P.C. We have enclosed a diagram of this facility for your review.

4884 Berl Drive
Saginaw, MI 48604

Item #3: ADD AUTHORIZED USERS

Please add the following physicians to our current NRC license.

K.K. Ravindran, M.D.
Umesh Badami, M.D.

Group 35.200
Group 35.200

573190
RECEIVED JUL 19 2010

Covenant HealthCare

Enclosures:

UA BADAMI

July 13, 2010

**TRANSFER OF CONTROL
PER INFORMATION APPENDIX G, NUREG-1556, VOL. 9, REV. 2**

1. License No. 21-26703-01

Current name: Valley Cardiology, P.C.

The new name will be: Covenant Medical Center, Inc.

The license contact name is K.K. Ravindran, M.D. 1-989-497-9395

Transfer of stocks by statutory merger will be made. Covenant Medical Center, Inc. will obtain possession of the nuclear medicine camera, all radiation safety equipment, and all sealed sources for the following location: 4884 Berl Drive, Saginaw, MI 48604. Valley Cardiology, P.C. will terminate its license.

2. The current RSO and approved users for Materials License 21-01492-02 issued to Covenant Medical Center, Inc. will be responsible for this address of use.
3. Valley Cardiology, P.C. will no longer operate once the transfer is complete. All nuclear medicine activities will be under Covenant Medical Center, Inc. Materials License number 21-01492-02. Only diagnostic Nuclear Medicine studies will be performed under 35.200 (excluding Mo-99/Tc-99m generators and Xexon-133) at this address of use.
4. All required records regarding the use and possession of licensed materials will be current at the time of the transfer. The status of compliance will be maintained before, during and after the merger. All of the previous radioactive material records are maintained on site. New records regarding licensed material will be reviewed and shared as necessary for the Radiation Safety Committee and Radiation Safety Officer of Covenant Medical Center, Inc.

5. All required documents and records are currently kept in accordance with the NRC regulations. These include, but are not limited to the annual calibration of survey instruments, semi-annual leak testing of non-exempt sealed radioactive sources, sealed source inventory, radiation monitoring, and personnel exposure monitoring reports.

We confirm that the areas of storage, preparation, handling, and administration of radioactive materials are surveyed for acceptable radiation levels as well as for removable contamination. If contamination of these areas is detected during these surveys, decontamination is undertaken and completed at that time. The unsealed radionuclides in use at this location are all short-lived (i.e. half lives less than 65 days, most less than 10 days) and in unit doses. Therefore, radioactive contamination is highly unlikely at this facility. If contamination were present, it would be discovered prior to the transfer and decontaminated ALARA.

6. All activities conducted previously under NRC Materials liense #21-26703-01 will be conducted under the Radiation Protection Program, statements, and conditions of NRC Materials License #21-01492-02 issued to Covenant Medical Center, Inc.

Covenant Medical Center, Inc. accepts full responsibility for the noted areas of use. This facility is exempt from providing financial assurance for decommissioning because of the type of radioactive materials used (i.e. short-lived, unsealed sources in small quantities only). Routine radiation monitoring of the facility ensures that contamination will not be transferred during any subsequent change of ownership.

All parties involved with the transfer are aware and agree to the planned transfer of ownership.
