Q-2

October 29, 2010

Mr. Lodhi,

In response to your inquiry regarding setting limits for each of the isotopes that we utilize for well logging applications, Well Data Services, Inc. submits the following criteria for your perusal. We possess two isotopes, Cesium 137 and Americium 241.

The following are the maximum limits we would like to be considered.

- 1. Cesium 137 - 300 millicuries or 11.1 gigabequerels per source
- 2. Americium 241 - 250 millicuries or 9.25 gigabequerels per source

Thank you and please contact me if I may be of further assistance to you.

Sincerely,

Chad Stultz  
Radiation Safety Officer
