Subject: GEH Vallecitos - Acceptance Review of Chemical Safety Section of the
Renewal Application

Hi Chris,

I have conducted an acceptance review of Chapter 6 on chemical safety. The acceptance review is based upon the requirements of Part 70, 70.22 [paragraphs a(6) through a(9)] and 70.23 [paragraphs a(2)) through a(4)], as they apply to chemical safety, using the SRP as guidance (NUREG-1520, Revision 1). The chemical safety section is very short and extremely general. It is lacking fundamental information required by the regulations; for example, it does not contain a listing of significant chemicals and approximate quantities, potential hazards, and controls to address potential hazards. Chemical use, equipment, and procedures are not described. There is insufficient information for a reviewer to initiate a review, conduct evaluations, and make a determination regarding adequate assurances of safety. Consequently, the application should not be accepted.

Have a great evening,

Alex.
