*na hunts are hunts which a specific AMU was not assigned.

Average Days is based on the total number of days hunted divided by the total number of hunts in each hunt code. The estimated total hunters, days and harvest are based on individual hunt code values. Estimated values for hunters are based on a factor of licenses sold divided by returns received. For example: Public hunts for hunt code ANT-1-100, taking place in AMU 3, there were 19 licenses sold, divided by 14 licenses returned, resulting in a quotient of 1.3571. This quotient was multiplied by the number of returns indicating a hunt (12), yielding an estimate of 16 hunters. This factor (1.3571) was then multiplied by the sum of days (17) and harvest (12) to result in an estimate of 23 days and 16 total pronghorn antelope harvested for that particular hunt code.

There were 5197 licenses issued in the 2007-2008 hunt season. 2470 hunters returned the tear-off survey portion of their license via mail, telephone, or internet. This results in a response rate of 48%. Of the returns, 2381 reported hunting, and 89 did not.

There were 162 licenses sold for population reduction hunts during the 2007-2008 hunt year. None of the licenses were validated and license fees were refunded.

*na hunts are hunts which a specific AMU was not assigned.

Average Days is based on the total number of days hunted divided by the total number of hunts in each hunt code.

The estimated total hunters, days and harvest are based on individual hunt code values. Estimated values for hunters are based on a factor of licenses sold divided by returns received. For example: Public hunts for hunt code ANT-1-100, taking place in AMU 3, there were 19 licenses sold, divided by 14 licenses returned, resulting in a quotient of 1.3571.

This quotient was multiplied by the number of returns indicating a hunt (12), yielding an estimate of 16 hunters. This factor (1.3571) was then multiplied by the sum of days (17) and harvest (12) to result in and estimate of 23 days and 16 total pronghorn antelope harvested for that particular hunt code.

There were 5197 licenses issued in the 2007-2008 hunt season. 2470 hunters returned the tear-off survey portion of their license via mail, telephone, or internet. This results in a response rate of 48%.

Of the returns, 2381 reported hunting, and 89 did not.

There were 162 licenses sold for population reduction hunts during the 2007-2008 hunt year. None of the licenses were validated and license fees were refunded.

*na hunts are hunts which a specific AMU was not assigned.

Average Days is based on the total number of days hunted divided by the total number of hunts in each Hunt Code.

The estimated total hunters, days and harvest are based on individual hunt code values. Estimated values for hunters are based on a factor of licenses sold divided by returns received. For example: public hunts for hunt code ANT-1-100 and taking place in AMU 3, there were 19 licenses sold, divided by 14 licenses returned, resulting in a quotient of 1.3571. This quotient was multiplied by the number of returns indicating a hunt (12), yielding an estimate of 16 hunters. This factor (1.3571) was then multiplied by the sum of days (17) and harvest (12) to result in an estimate of 23 days and 16 total pronghorn antelope harvested for that hunt code.

There were 5197 licenses issued in the 2007-2008 hunt season. 2470 hunters returned the tear-off survey portion of their license via mail, telephone or internet. This results in a response rate of 48%. Of the returns, 2381 reported hunting, and 89 did not.

There were 162 licenses sold for population reduction hunts during the 2007-2008 hunt year. None of the licenses were validated and license fees were refunded.
