Reference: Oregon State University TRIGA Reactor (OSTR)
Docket No. 50-243, License No. R-106

In accordance with section 6.7.1 of the OSTR Technical Specifications, we are hereby submitting the Oregon State University Radiation Center and OSTR Annual Report for the period July 1, 2009 through June 30, 2010.

The Annual Report continues the pattern established over the past few years by including information about the entire Radiation Center rather than concentrating primarily on the reactor. Because this report addresses a number of different interests, it is rather lengthy, but we have incorporated a short executive summary which highlights the Center's activities and accomplishments over the past year.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on: 10/26/10

Sincerely,

Steven R. Reese
Director

Acknowledgements

The past year we have had the opportunity to catch our breath from the high intensity activities related to the conversion. In some ways a sense of normalization has returned that we have not seen for a few years now. It is important to realize that the effort that was put forth will reap benefits not just in terms of the new reactor core or the 20-year license extension but also by creating the ability to perform analyses and evaluate changes to the reactor that we were not previously in a position to do. This was precisely why the decision was made to perform as much of the license renew and conversion ourselves. We have in a very tangible sense taken true ownership of the reactor. This is something we should all be very proud of. In this regard, I for one am extremely grateful for all effort put forth by the Radiation Center Staff.

As this is an acknowledgement section, there are a couple of people whom deserve special recognition. First, I'd like to thank Dr. Rich Holdren for his unwavering support especially in this year of transition for the Vice President for Research. He has provided the continuity and support that has been both effective and appreciated. Secondly, I wish to send our warmest regards on the retirement of Shirley Campbell. She contributed to the Radiation Center across three decades of service with a level of dedication that is only rarely seen. More importantly, she has been a good friend. We wish her and her husband Bob all the best in retirement. She will be missed. This report is dedicated to her.

Overview

Executive Summary

The data from this reporting year shows that the use of the Radiation Center and the Oregon State TRIGA reactor (OSTR) has continued to grow in many areas.

The Radiation Center supported 54 different courses this year, mostly in the Department of Nuclear Engineering and Radiation Health Physics. About 30% of these courses involved the OSTR. The number of OSTR hours used for academic courses and training was 46, while 2,543 hours were used for research projects. Eighty-two percent of the OSTR research hours were in support of off-campus research projects, reflecting the use of the OSTR nationally and internationally. Radiation Center users published or submitted 109articles this year, and made 51 presentations on work that involved the OSTR or Radiation Center. The number of samples irradiated in the reactor during this reporting period was 688. Funded OSTR use hours comprised 88% of the research use.

Personnel at the Radiation Center conducted 106 tours of the facility, accommodating 2,132 visitors. The visitors included elementary, middle school, high school, and college students; relatives and friends; faculty; current and prospective clients; national laboratory and industrial scientists and engineers; and state, federal and international officials. The Radiation Center is a significant positive attraction on campus because visitors leave with a good impression of the facility and of Oregon State University.

The Radiation Center projects database continues to provide a useful way of tracking the many different aspects of work at the facility. The number of projects supported this year was 191. Reactor related projects comprised 74% of all projects. The total research supported by the Radiation Center, as reported by our researchers, was $1,469,543. The actual total is likely considerably higher. This year the Radiation Center provided service to 55 different organizations/institutions, 35% of which were from other states and 20% of which were from outside the U. S. and Canada. So while the Center's primary mission is local, it is also a facility with a national and international clientele.

The Radiation Center web site provides an easy way for potential users to evaluate the Center's facilities and capabilities as well as to apply for a project and check use charges. The address is: http://radiationcenter.oregonstate.edu.

Introduction

The current annual report of the Oregon State University Radiation Center and TRIGA Reactor follows the usual format by including information relating to the entire Radiation Center rather than just the reactor. However, the information is still presented in such a manner that data on the reactor may be examined separately, if desired. It should be noted that all annual data given in this report covers the period from July 1, 2009 through June 30, 2010. Cumulative reactor operating data in this report relates only to the LEU fueled core. This covers the period beginning July 1, 2008 to the present date. For a summary of data on the reactor's two other cores, the reader is referred to previous annual reports.

In addition to providing general information about the activities of the Radiation Center, this report is designed to meet the reporting requirements of the U. S. Nuclear Regulatory Commission, the U. S. Department of Energy, and the Oregon Department of Energy. Because of this, the report is divided into several distinct parts so that the reader may easily find the sections of interest.

Overview of the Radiation Center

The Radiation Center is a unique facility which serves the entire OSU campus, all other institutions within the Oregon University System, and many other universities and organizations throughout the nation and the world. The Center also regularly provides special services to state and federal agencies, particularly agencies dealing with law enforcement, energy, health, and environmental quality, and renders assistance to Oregon industry. In addition, the Radiation Center provides permanent office and laboratory space for the OSU Department of Nuclear Engineering and Radiation Health Physics, the OSU Institute of Nuclear Science and Engineering, and for the OSU nuclear chemistry, radiation chemistry, geochemistry and radiochemistry programs. There is no other university facility with the combined capabilities of the OSU Radiation Center in the western half of the United States.

Located in the Radiation Center are many items of specialized equipment and unique teaching and research facilities. They include a TRIGA Mark II research nuclear reactor; a ^{60}Co gamma irradiator; a large number of state-of-the art computer-based gamma radiation spectrometers and associated germanium detectors; and a variety of instruments for radiation measurements and monitoring. Specialized facilities for radiation work include teaching and research laboratories with instrumentation and related equipment for performing neutron activation analysis and radiotracer studies; laboratories for plant experiments involving radioactivity; a facility for repair and calibration of radiation protection instrumentation; and facilities for packaging radioactive materials for shipment to national and international destinations.

A major non-nuclear facility housed in the Radiation Center is the one-quarter scale thermal hydraulic advanced plant experimental (APEX) test facility for the Westinghouse AP600 and AP1000 reactor designs. The AP600 and AP1000 are next-generation nuclear reactor designs which incorporate many passive safety features as well as considerably simplified plant systems and equipment. APEX operates at pressures up to 400 psia and temperatures up to 450°F using electrical heaters instead of nuclear fuel. All major components of the AP600 and AP1000 are included in APEX and all systems are appropriately scaled to enable the experimental measurements to be used for safety evaluations and licensing of the full scale plant. This world-class facility meets exacting quality assurance criteria to provide assurance of safety as well as validity of the test results.

Also housed in the Radiation Center is the Advanced Thermal Hydraulics Research Laboratory (ATHRL), which is used for state-of-the-art two-phase flow experiments.

The Radiation Center staff regularly provides direct support and assistance to OSU teaching and research programs. Areas of expertise commonly involved in such efforts include nuclear engineering, nuclear and radiation chemistry, neutron activation analysis, radiation effects on biological systems, radiation dosimetry, environmental radioactivity, production of short-lived radioisotopes, radiation shielding, nuclear instrumentation, emergency response, transportation of radioactive materials, instrument calibration, radiation health physics, radioactive waste disposal, and other related areas.

In addition to formal academic and research support, the Center's staff provides a wide variety of other services including public tours and instructional programs, and professional consultation associated with the feasibility, design, safety, and execution of experiments using radiation and radioactive materials.

People

This section contains a listing of all people who were residents of the Radiation Center or who worked a significant amount of time at the Center during this reporting period.

It should be noted that not all of the faculty and students who used the Radiation Center for their teaching and research are listed. Summary information on the number of people involved is given in Table VI.1, while individual names and projects are listed in Tables VI.2 and VI.3.

Radiation Center Staff

Steve Reese, Director

Facilities

Research Reactor

The Oregon State University TRIGA Reactor (OSTR) is a water-cooled, swimming pool type research reactor which uses uranium/zirconium hydride fuel elements in a circular grid array. The reactor core is surrounded by a ring of graphite which serves to reflect neutrons back into the core. The core is situated near the bottom of a 22-foot deep water-filled tank, and the tank is surrounded by a concrete bioshield which acts as a radiation shield and structural support. The reactor is licensed by the U.S. Nuclear Regulatory Commission to operate at a maximum steady state power of 1.1 MW and can also be pulsed up to a peak power of about 2500 MW.

The OSTR has a number of different irradiation facilities including a pneumatic transfer tube, a rotating rack, a thermal column, four beam ports, five sample holding (dummy) fuel elements for special in-core irradiations, an in-core irradiation tube, and a cadmium-lined in-core irradiation tube for experiments requiring a high energy neutron flux.

The **pneumatic transfer facility** enables samples to be inserted and removed from the core in four to five seconds. Consequently this facility is normally used for neutron activation analysis involving short-lived radionuclides. On the other hand, the **rotating rack** is used for much longer irradiation of samples (e.g., hours). The rack consists of a circular array of 40 tubular positions, each of which can hold two sample tubes. Rotation of the rack ensures that each sample will receive an identical irradiation.

The reactor's **thermal column** consists of a large stack of graphite blocks which slows down neutrons from the reactor core in order to increase thermal neutron activation of samples. Over 99% of the neutrons in the thermal column are thermal neutrons. Graphite blocks are removed from the thermal column to enable samples to be positioned inside for irradiation.

The **beam ports** are tubular penetrations in the reactor's main concrete shield which enable neutron and gamma radiation to stream from the core when a beam port's shield plugs are removed. The neutron radiography facility utilized the tangential beam port (beam port #3) to produce ASTM E545 category I radiography capability. The other beam ports are available for a variety of experiments.

If samples to be irradiated require a large neutron fluence, especially from higher energy neutrons, they may be inserted into a dummy fuel element. This device will then be placed into

one of the core's inner grid positions which would normally be occupied by a fuel element. Similarly samples can be placed in the **in-core irradiation tube (ICIT)** which can be inserted in the same core location.

The **cadmium-lined in-core irradiation tube (CLICIT)** enables samples to be irradiated in a high flux region near the center of the core. The cadmium lining in the facility eliminates thermal neutrons and thus permits sample exposure to higher energy neutrons only. The cadmium-lined end of this air-filled aluminum irradiation tube is inserted into an inner grid position of the reactor core which would normally be occupied by a fuel element. It is the same as the ICIT except for the presence of the cadmium lining.

The two main uses of the OSTR are instruction and research.

Instruction

Instructional use of the reactor is twofold. First, it is used significantly for classes in Nuclear Engineering, Radiation Health Physics, and Chemistry at both the graduate and undergraduate levels to demonstrate numerous principles which have been presented in the classroom. Basic neutron behavior is the same in small reactors as it is in large power reactors, and many demonstrations and instructional experiments can be performed using the OSTR which cannot be carried out with a commercial power reactor. Shorter-term demonstration experiments are also performed for many undergraduate students in Physics, Chemistry, and Biology classes, as well as for visitors from other universities and colleges, from high schools, and from public groups.

The second instructional application of the OSTR involves educating reactor operators, operations managers, and health physicists. The OSTR is in a unique position to provide such education since curricula must include hands-on experience at an operating reactor and in associated laboratories. The many types of educational programs that the Radiation Center provides are more fully described in Part VI of this report.

During this reporting period the OSTR accommodated a number of different OSU academic classes and other academic programs. In addition, portions of classes from other Oregon universities were also supported by the OSTR.

Research

The OSTR is a unique and valuable tool for a wide variety of research applications and serves as an excellent source of neutrons and/or gamma radiation. The most commonly used experimental technique requiring reactor use is instrumental neutron activation analysis (INAA). This is a particularly sensitive method of elemental analysis which is described in more detail in Part VI.

The OSTR's irradiation facilities provide a wide range of neutron flux levels and neutron flux qualities which are sufficient to meet the needs of most researchers. This is true not only for INAA, but also for other experimental purposes such as the ^{39}Ar/^{40}Ar ratio and fission track methods of age dating samples.

Analytical Equipment

The Radiation Center has a large variety of radiation detection instrumentation. This equipment is upgraded as necessary, especially the gamma ray spectrometers with their associated computers and germanium detectors. Additional equipment for classroom use and an extensive inventory of portable radiation detection instrumentation are also available.

Radiation Center nuclear instrumentation receives intensive use in both teaching and research applications. In addition, service projects also use these systems and the combined use often results in 24-hour per day schedules for many of the analytical instruments. Use of Radiation Center equipment extends beyond that located at the Center and instrumentation may be made available on a loan basis to OSU researchers in other departments.

Radioisotope Irradiation Sources

The Radiation Center is equipped with a 1,644 curie (as of 7/27/01) Gammacell 220 ^{60}Co irradiator which is capable of delivering high doses of gamma radiation over a range of dose rates to a variety of materials.

Typically, the irradiator is used by researchers wishing to perform mutation and other biological effects studies; studies in the area of radiation chemistry; dosimeter testing; sterilization of food materials, soils, sediments, biological specimen, and other media; gamma radiation damage studies; and other such applications. In addition to the ^{60}Co irradiator, the Center is also equipped with a variety of smaller ^{60}Co, ^{137}Cs, ^{226}Ra, plutonium-beryllium, and other isotopic sealed sources of various radioactivity levels which are available for use as irradiation sources.

During this reporting period there was a diverse group of projects using the ^{60}Co irradiator. These projects included the irradiation of a variety of biological materials including different types of seeds.

In addition, the irradiator was used for sterilization of several media and the evaluation of the radiation effects on different materials. Table III.1 provides use data for the Gammacell 220 irradiator.

Laboratories and Classrooms

The Radiation Center is equipped with a number of different radioactive material laboratories designed to accommodate research projects and classes offered by various OSU academic departments or off-campus groups.

Instructional facilities available at the Center include a laboratory especially equipped for teaching radiochemistry and a nuclear instrumentation teaching laboratory equipped with modular sets of counting equipment which can be configured to accommodate a variety of experiments involving the measurement of many types of radiation. The Center also has two student computer rooms.

In addition to these dedicated instructional facilities, many other research laboratories and pieces of specialized equipment are regularly used for teaching. In particular, classes are routinely given access to gamma spectrometry equipment located in Center laboratories. A number of classes also regularly use the OSTR and the Reactor Bay as an integral part of their instructional coursework.

There are two classrooms in the Radiation Center which are capable of holding about 35 and 18 students. In addition, there are two smaller conference rooms and a library suitable for graduate classes and thesis examinations. As a service to the student body, the Radiation Center also provides an office area for the student chapters of the American Nuclear Society and the Health Physics Society.

This reporting period saw continued high utilization of the Radiation Center's thermal hydraulics laboratory. This laboratory is being used by Nuclear Engineering faculty members to accommodate a one-quarter scale model of the Palisades Nuclear Power reactor. The multi-million dollar advanced plant experimental (APEX) facility was fully utilized by the U. S. Nuclear Regulatory Commission to provide licensing data and to test safety systems in "beyond design basis" accidents. The fully scaled, integral model APEX facility uses electrical heating elements to simulate the fuel elements, operates at 450°F and 400 psia, and responds at twice real time. It is the only facility of its type in the world and is owned by the U. S. Department of Energy and operated by OSU. In addition, a new building, Advanced Thermal Hydraulics Research Laboratory (ATHRL) was constructed next to the Reactor Building in 1998.

All of the laboratories and classrooms are used extensively during the academic year. A listing of courses accommodated at the Radiation Center during this reporting period along with their enrollments is given in Table III.2.

Instrument Repair & Calibration Facility

The Radiation Center has a facility for the repair and calibration of essentially all types of radiation monitoring instrumentation. This includes instruments for the detection and measurement of alpha, beta, gamma, and neutron radiation. It encompasses both high range instruments for measuring intense radiation fields and low range instruments used to measure environmental levels of radioactivity.

The Center's instrument repair and calibration facility is used regularly throughout the year and is absolutely essential to the continued operation of the many different programs carried out at the Center. In addition, the absence of any comparable facility in the state has led to a greatly expanded instrument calibration program for the Center, including calibration of essentially all radiation detection instruments used by state and federal agencies in the state of Oregon. This includes instruments used on the OSU campus and all other institutions in the Oregon University System, plus instruments from the Oregon Health Division's Radiation Protection Services, the Oregon Department of Energy, the Oregon Public Utilities Commission, the Oregon Health Sciences University, the Army Corps of Engineers, and the U. S. Environmental Protection Agency.

Library

The Radiation Center has a library containing a significant collections of texts, research reports, and videotapes relating to nuclear science, nuclear engineering, and radiation protection.

The Radiation Center is also a regular recipient of a great variety of publications from commercial publishers in the nuclear field, from many of the professional nuclear societies, from the U. S. Department of Energy, the U. S. Nuclear Regulatory Commission, and other federal agencies. Therefore, the Center library maintains a current collection of leading nuclear research and regulatory documentation. In addition, the Center has a collection of a number of nuclear power reactor Safety Analysis Reports and Environmental Reports specifically prepared by utilities for their facilities.

The Center maintains an up-to-date set of reports from such organizations as the International Commission on Radiological Protection, the National Council on Radiation Protection and Measurements, and the International Commission on Radiological Units. Sets of the current U.S. Code of Federal Regulations for the U.S. Nuclear Regulatory Commission, the U.S. Department of Transportation, and other appropriate federal agencies, plus regulations of various state regulatory agencies are also available at the Center.

The Radiation Center videotape library has over one hundred tapes on nuclear engineering, radiation protection, and radiological emergency response topics. In addition, the Radiation Center uses videotapes for most of the technical orientations which are required for personnel working with radiation and radioactive materials. These tapes reproduced, recorded, and edited by Radiation Center staff, using the Center's videotape equipment and the facilities of the OSU Communication Media Center.

The Radiation Center library is used mainly to provide reference material on an as-needed basis. It receives extensive use during the academic year. In addition, the orientation videotapes are used intensively during the beginning of each term and periodically thereafter.

Table III.1

Gammacell 220 ^{60}Co Irradiator Use

Purpose of Irradiation	Samples	Dose Range (rads)	Number of Irradiations	Use Time (hours)
Biological Studies	Mice	$5.0\text{x}10^2$ to $9.0\text{x}10^2$	24	1
Sterilization	chitosan, mouse diet, wood, bone cement	$2.0\text{x}10^6$ to $5.0\text{x}10^6$	42	3384
Material Evaluation	polymers, chemicals, silcon polymers	$3.0\text{x}10^5$ to $8.0\text{x}10^6$	23	892
Botanical Studies	wheat seeds, seeds, wheat germ	$1.0\text{x}10^3$ to $7.5\text{x}10^4$	63	14
Totals			152	4291

Reactor

Operating Status

During the operating period between July 1, 2009 and June 30, 2010, the reactor produced 1126 MWH of thermal power during its 1259 critical hours. The new low enriched uranium (LEU) fuel loading continued to provide a neutron fluence consistent with SAR analysis values.

Tables IV.1 through IV.3 provide annual energy production, fuel usage and use request data on the original 20% enriched and the 70% enriched (FLIP) cores.

Experiments Performed

During the current reporting period there were nine approved reactor experiments available for use in reactor-related programs. They are:

A-1 Normal TRIGA Operation (No Sample Irradiation).

B-3 Irradiation of Materials in the Standard OSTR Irradiation Facilities.

B-11 Irradiation of Materials Involving Specific Quantities of Uranium and Thorium in the Standard OSTR Irradiation Facilities.

B-12 Exploratory Experiments.

B-23 Studies Using TRIGA Thermal Column.

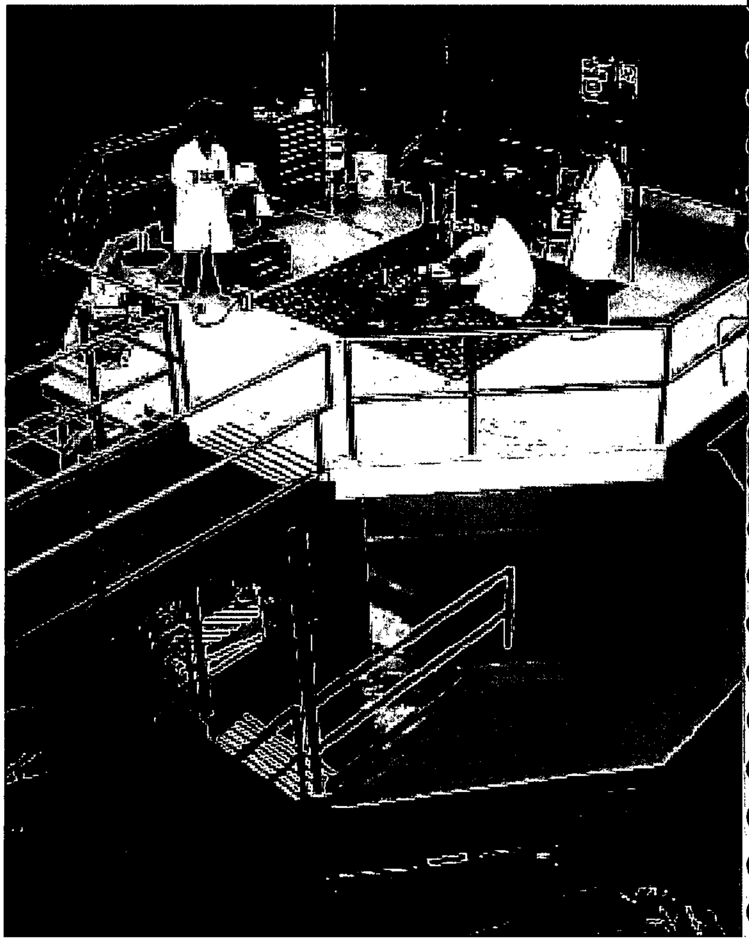
B-29 Reactivity Worth of Fuel.

B-31 TRIGA Flux Mapping.

B-33 Irradiation of Combustible Liquids in Rotating Rack.

B-34 Irradiation of enriched uranium in the Neutron Radiography Facility.

B-35 Irradiation of enriched uranium in the PGNAA Facility.



Of these available experiments, three were used during the reporting period. Table IV.4 provides information related to the frequency of use and the general purpose of their use.

Inactive Experiments

Presently 33 experiments are in the inactive file. This consists of experiments which have been performed in the past and may be reactivated. Many of these experiments are now performed under the more general experiments listed in the previous section. The following list identifies these inactive experiments.

A-2 Measurement of Reactor Power Level via Mn Activation.

A-3 Measurement of Cd Ratios for Mn, In, and Au in Rotating Rack.

A-4	Neutron Flux Measurements in TRIGA.
A-5	Copper Wire Irradiation.
A-6	In-core Irradiation of LiF Crystals.
A-7	Investigation of TRIGA's Reactor Bath Water Temperature Coefficient and High Power Level Power Fluctuation.
B-1	Activation Analysis of Stone Meteorites, Other Meteorites, and Terrestrial Rocks.
B-2	Measurements of Cd Ratios of Mn, In, and Au in Thermal Column.
B-4	Flux Mapping.
B-5	In-core Irradiation of Foils for Neutron Spectral Measurements.
B-6	Measurements of Neutron Spectra in External Irradiation Facilities.
B-7	Measurements of Gamma Doses in External Irradiation Facilities.
B-8	Isotope Production.
B-9	Neutron Radiography.
B-10	Neutron Diffraction.
B-13	This experiment number was changed to A-7.
B-14	Detection of Chemically Bound Neutrons.
B-15	This experiment number was changed to C-1.
B-16	Production and Preparation of ^{18}F.
B-17	Fission Fragment Gamma Ray Angular Correlations.

Unplanned Shutdowns

There were two unplanned reactor shutdowns during the current reporting period. Table IV.5 details these events.

Changes Pursuant to10 CFR 50-59

Three new safety evaluations were performed in support of reactor operations this year. They are:

08-03, OSTROP 29, Reactor Re-Start with LEU 30/20 Fuel

Description

This is a new procedure written to allow the return to power of the OSTR using our low enriched conversion fuel.

09-02 and 03, RCHHP 31 Procedural Changes

Description

RCHHP 31, Procedures for Sampling and Pumping the Liquid Waste Hold-Up Tank, was modified to be consistent with OSU policy for the discharge of radioactive material to the sanitary sewer system.

10-01, Changes to experiment B35, Irradiation of Enriched Uranium in the Prompt Gamma Neutron Activation Analysis Facility

Description

This experiment change allows the re-use of previously irradiated HEU foils following an assessment of the accumulated fission product gases and their potential release to the reactor bay.

Surveillance and Maintenance

Non-Routine Maintenance

July 2009

- Replaced the EDG battery charger.
- Internal diaphragm on the reactor tank water level detector punctured during cleaning. A new capacitance type detector installed to upgrade.

August 2009

- Replaced demin filter due to accumulated material from the reflector gas release event.
- Reactor bay ventilation heater coils replaced with horizontally configured unit.

September 2009

- Cleaned old accumulated moly grease from the Transient rod drive system and relubricated with Lubriplate grease.

October 2009

- Replaced bearings in D204 Biology exhaust hood fan in D400.

December 2009

- Replaced all electrical buswork on the N-S crane electrical track, including the addition of a 4th ground rail.
- Tightened primary heat exchanger inlet piping flange due to leakage possibly caused by excessive low bay temperatures.
- Larger steam trap and drain line installed on the reactor bay ventilation heating system resulting in proper operation of the bay heating system.

February 2010

- Replaced secondary cooling pump seal.
- Replaced failed CAM master power on toggle switch.
- Replaced damaged bay steam heating valve diaphragm.
- Repaired a leak in the bay roof heat exchanger piping penetration.

March 2010

- Replaced failed Safe Channel UIC with spare CIC and repaired left hand drawer HV power supply.

May 2010

- Added a "post" to the control panel of the EDG to prevent actuation of the emergency shutdown switch when the access door is closed.

June 2010

- Replaced both detector and rate meter for failing ARM detector #7.

Table IV.1
Present OSTR Operating Statistics

Operational Data For LEU Core	Annual Values (2009/2010)	Cumulative Values

Radiation Protection

Introduction

The purpose of the radiation protection program is to ensure the safe use of radiation and radioactive material in the Center's teaching, research, and service activities, and in a similar manner to the fulfillment of all regulatory requirements of the State of Oregon, the U.S. Nuclear Regulatory Commission, and other regulatory agencies. The comprehensive nature of the program is shown in Table V.1, which lists the program's major radiation protection requirements and the performance frequency for each item.

The radiation protection program is implemented by a staff consisting of a Senior Health Physicist, a Health Physicist, and several part-time Health Physics Monitors (see Part II). Assistance is also provided by the reactor operations group, the neutron activation analysis group, the Scientific Instrument Technician, and the Radiation Center Director.

The data contained in the following sections have been prepared to comply with the current requirements of Nuclear Regulatory Commission (NRC) Facility License No. R-106 (Docket No. 50-243) and the Technical Specifications contained in that license. The material has also been prepared in compliance with Oregon Department of Energy Rule No. 345-30-010, which requires an annual report of environmental effects due to research reactor operations.

Within the scope of Oregon State University's radiation protection program, it is standard operating policy to maintain all releases of radioactivity to the unrestricted environment and all exposures to radiation and radioactive materials at levels which are consistently "as low as reasonably achievable" (ALARA).

Environmental Releases

The annual reporting requirements in the OSTR Technical Specifications state that the licensee (OSU) shall include "a summary of the nature and amount of radioactive effluents released or discharged to the environs beyond the effective control of the licensee, as measured at, or prior to, the point of such release or discharge." The liquid and gaseous effluents released, and the solid waste generated and transferred are discussed briefly below. Data regarding these effluents are also summarized in detail in the designated tables.

Liquid Effluents Released

Liquid Effluents

Oregon State University has implemented a policy to reduce the volume of radioactive liquid effluents to an absolute minimum. For example, water used during the ion exchanger resin change is now recycled as reactor makeup water. Waste water from Radiation Center laboratories and the OSTR is collected at a holdup tank prior to release to the sanitary sewer. Liquid effluent are analyzed for radioactivity content at the time it is released to the collection point. For this reporting period, the Radiation Center and reactor made three liquid effluent releases to the sanitary sewer. All Radiation Center and reactor facility liquid effluent data pertaining to this release are contained in Table V.2.

Liquid Waste Generated and Transferred

Liquid waste generated from glassware and laboratory experiments is transferred by the campus Radiation Safety Office to its waste processing facility. The annual summary of liquid waste generated and transferred is contained in Table V.3.

Airborne Effluents Released

Airborne effluents are discussed in terms of the gaseous component and the particulate component.

Gaseous Effluents
Gaseous effluents from the reactor facility are monitored by the reactor stack effluent monitor. Monitoring is continuous, i.e., prior to, during, and after reactor operations. It is normal for the reactor facility stack effluent monitor to begin operation as one of the first systems in the morning and to cease operation as one of the last systems at the end of the day. All gaseous effluent data for this reporting period are summarized in Table V.4.

Particulate effluents from the reactor facility are also monitored by the reactor facility stack effluent monitor.

Particulate Effluents
Evaluation of the detectable particulate radioactivity in the stack effluent confirmed its origin as naturally-occurring radon daughter products, within a range of approximately $3x10^{-11}$ μCi/ml to 1×10^{-9} μCi/ml. This particulate radioactivity is predominantly ^{214}Pb and ^{214}Bi, which is not associated with reactor operations.

There was no release of particulate effluents with a half life greater than eight days and therefore the reporting of the average concentration of radioactive particulates with half lives greater than eight days is not applicable.

Solid Waste Released

Data for the radioactive material in the solid waste generated and transferred during this reporting period are summarized in Table V.5 for both the reactor facility and the Radiation Center. Solid radioactive waste is routinely transferred to OSU Radiation Safety. Until this waste is disposed of by the Radiation Safety Office, it is held along with other campus radioactive waste on the University's State of Oregon radioactive materials license.

Solid radioactive waste is disposed of by OSU Radiation Safety by transfer to the University's radioactive waste disposal vendor, Thomas Gray Associates, Inc., for burial at its installation located near Richland, Washington.

Personnel Dose

The OSTR annual reporting requirements specify that the licensee shall present a summary of the radiation exposure received by facility personnel and visitors. The summary includes all Radiation Center personnel who may have received exposure to radiation. These personnel have been categorized into six groups: facility operating personnel, key facility research personnel, facilities services maintenance personnel, students in laboratory classes, police and security personnel, and visitors.

Facility operating personnel include the reactor operations and health physics staff. The dosimeters used to monitor these individuals include quarterly TLD badges, quarterly track-etch/albedo neutron dosimeters, monthly TLD (finger) extremity dosimeters, pocket ion chambers, electronic dosimetry.

Key facility research personnel consist of Radiation Center staff, faculty, and graduate students who perform research using the reactor, reactor-activated materials, or using other research facilities present at the Center. The individual dosimetry requirements for these personnel will vary with the type of research being conducted, but will generally include a quarterly TLD film badge and TLD (finger) extremity dosimeters. If the possibility of neutron exposure exists, researchers are also monitored with a track-etch/ albedo neutron dosimeter.

Facilities Services maintenance personnel are normally issued a gamma sensitive electronic dosimeter as their basic monitoring device. A few Facilities Services personnel who routinely perform maintenance on mechanical or refrigeration equipment are issued a quarterly Xß(γ) TLD badge and other dosimeters as appropriate for the work being performed.

Students attending laboratory classes are issued quarterly Xß(γ) TLD badges, TLD (finger) extremity dosimeters, and track-etch/albedo or other neutron dosimeters, as appropriate.

Students or small groups of students who attend a one-time lab demonstration and do not handle radioactive materials are usually issued a gamma sensitive electronic dosimeter. These results are not included with the laboratory class students.

OSU police and security personnel are issued a quarterly Xß(γ) TLD badge to be used during their patrols of the Radiation Center and reactor facility.

Visitors, depending on the locations visited, may be issued a gamma sensitive electronic dosimeters. OSU Radiation Center policy does not normally allow people in the visitor category to become actively involved in the use or handling of radioactive materials.

An annual summary of the radiation doses received by each of the above six groups is shown in Table V.6. There were no personnel radiation exposures in excess of the limits in 10 CFR 20 or State of Oregon regulations during the reporting period.

Facility Survey Data

The OSTR Technical Specifications require an annual summary of the radiation levels and levels of contamination observed during routine surveys performed at the facility. The Center's comprehensive area radiation monitoring program encompasses the Radiation Center as well as the OSTR, and therefore monitoring results for both facilities are reported.

Area Radiation Dosimeters
Area monitoring dosimeters capable of integrating the radiation dose are located at strategic positions throughout the reactor facility and Radiation Center. All of these dosimeters contain at least a standard personnel-type beta-gamma film or TLD pack. In addition, for key locations in the reactor facility and for certain Radiation Center laboratories a CR-39 plastic track-etch neutron detector has also been included in the monitoring package.

The total dose equivalent recorded on the various reactor facility dosimeters is listed in Table V.7 and the total dose equivalent recorded on the Radiation Center area dosimeters is listed in Table V.8. Generally, the characters following the Monitor Radiation Center (MRC) designator show the room number or location.

Routine Radiation and Contamination Surveys
The Center's program for routine radiation and contamination surveys consists of daily, weekly, and monthly measurements throughout the TRIGA reactor facility and Radiation Center. The frequency of these surveys is based on the nature of the radiation work being carried out at a particular location or on other factors which indicate that surveillance over a specific area at a defined frequency is desirable.

The primary purpose of the routine radiation and contamination survey program is to assure regularly scheduled surveillance over selected work areas in the reactor facility and in the Radiation Center, in order to provide current and characteristic data on the status of radiological conditions. A second objective of the program is to assure frequent on-the-spot personal observations (along with recorded data), which will provide advance warning of needed corrections and thereby help to ensure the safe use and handling of radiation sources and radioactive materials. A third objective, which is really derived from successful execution of the first two objectives, is to gather and document information which will help to ensure that all phases of the operational and radiation protection programs are meeting the goal of keeping radiation doses to personnel and releases of radioactivity to the environment "as low as reasonably achievable" (ALARA).

The annual summary of radiation and contamination levels measured during routine facility surveys for the applicable reporting period is given in Table V.9.

Environmental Survey Data

The annual reporting requirements of the OSTR Technical Specifications include "an annual summary of environmental surveys performed outside the facility."

Gamma Radiation Monitoring

On-site Monitoring
Monitors used in the on-site gamma environmental radiation monitoring program at the Radiation Center consist of the reactor facility stack effluent monitor described in Section V and nine environmental monitoring stations.

During this reporting period, each fence environmental station utilized an LiF TLD monitoring packet supplied and processed by Global Dosimetry Solutions, Inc. (GDS), Irvine, California. Each GDS packet contained three LiF TLDs and was exchanged quarterly for a total of 108 samples during the reporting period (9 stations x 3 TLDs per station x 4 quarters). The total number of GDS TLD samples for the reporting period was 108. A summary of the GDS TLD data is also shown in Table V.10.

From Table V.10 it is concluded that the doses recorded by the dosimeters on the TRIGA facility fence can be attributed to natural back-ground radiation, which is about 110 mrem per year for Oregon (Refs. 1, 2).

Off-site Monitoring
The off-site gamma environmental radiation monitoring program consists of twenty monitoring stations surrounding the Radiation Center (see Figure V.1) and six stations located within a 5 mile radius of the Radiation Center.

Each monitoring station is located about four feet above the ground (MRCTE 21 and MRCTE 22 are mounted on the roof of the EPA Laboratory and National Forage Seed Laboratory, respectively). These monitors are exchanged and processed quarterly, and the total number of TLD samples during the current one-year reporting period was 240 (20 stations x 3 chips per station per quarter x 4 quarters per year). The total number of GDS TLD samples for the reporting period was 240. A summary of GDS TLD data for the off-site monitoring stations is given in Table V.11.

After a review of the data in Table V.11, it is concluded that, like the dosimeters on the TRIGA facility fence, all of the doses recorded by the off-site dosimeters can be attributed to natural background radiation, which is about 110 mrem per year for Oregon (Refs. 1, 2).

Soil, Water, and Vegetation Surveys

The soil, water, and vegetation monitoring program consists of the collection and analysis of a limited number of samples in each category on a annual basis. The program monitors highly unlikely radioactive material releases from either the TRIGA reactor facility or the OSU Radiation Center, and also helps indicate the general trend of the radioactivity concentration in each of the various substances sampled. See Figure V.1 for the locations of the sampling stations for grass (G), soil (S), water (W) and rainwater (RW) samples. Most locations are within a 1000 foot radius of the reactor facility and the Radiation Center. In general, samples are collected over a local area having a radius of about ten feet at the positions indicated in Figure V.1.

There are a total of 22 sampling locations: four soil locations, four water locations (when water is available), and fourteen vegetation locations.

The annual concentration of total net beta radioactivity (minus tritium) for samples collected at each environmental soil, water, and vegetation sampling location (sampling station) is listed in Table V.12. Calculation of the total net beta disintegration rate incorporates subtraction of only the counting system back-ground from the gross beta counting rate, followed by application of an appropriate counting system efficiency.

The annual concentrations were calculated using sample results which exceeded the lower limit of detection (LLD), except that sample results which were less than or equal to the LLD were averaged in at the corresponding LLD concentration. Table V.13 gives the concentration and the range of values for each sample category for the current reporting period.

As used in this report, the LLD has been defined as the amount or concentration of radioactive material (in terms of μCi per unit volume or unit mass) in a representative sample, which has a 95% probability of being detected.

Identification of specific radionuclides is not routinely carried out as part of this monitoring program, but would be conducted if unusual radioactivity levels above natural background were detected. However, from Table V.12 it can be seen that the levels of radioactivity detected were consistent with naturally occurring radioactivity and comparable to values reported in previous years.

Radioactive Materials Shipments

A summary of the radioactive material shipments originating from the TRIGA reactor facility, NRC license R-106, is shown in Table V.14. A similar summary for shipments originating from the Radiation Center's State of Oregon radioactive materials license ORE 90005 is shown in Table V.15. A summary of radioactive material shipments exported under Nuclear Regulatory Commission general license 10 CFR 110.23 is shown in Table V.16.

Table V.1

Radiation Protection Program Requirements and Frequencies

Frequency	Radiation Protection Requirement
Daily/Weekly/Monthly	Perform Routing area radiation/contamination monitoring
Monthly	Collect and analyze TRIGA primary, secondary, and make-up water. Exchange personnel dosimeters and inside area monitoring dosimeters, and review exposure reports. Inspect laboratories. Calculate previous month's gaseous effluent discharge.
As Required	Process and record solid waste and liquid effluent discharges. Prepare and record radioactive material shipments. Survey and record incoming radioactive materials receipts. Perform and record special radiation surveys. Perform thyroid and urinalysis bioassays. Conduct orientations and training. Issue radiation work permits and provide health physics coverage for maintenance operations.
Quarterly	Prepare, exchange and process environmental TLD packs. Conduct orientations for classes using radioactive materials. Collect and analyze samples from reactor stack effluent line. Exchange personnel dosimeters and inside area monitoring dosimeters, and review exposure reports.
Semi-Annual	Leak test and inventory sealed sources. Conduct floor survey of corridors and reactor bay.
Annual	Calibrate portable radiation monitoring instruments and personnel pocket ion chambers. Calibrate reactor stack effluent monitor, continuous air monitors, remote area radiation monitors, and air samplers. Measure face air velocity in laboratory hoods and exchange dust-stop filters and HEPA filters as necessary. Inventory and inspect Radiation Center emergency equipment. Conduct facility radiation survey of the ^{60}Co irradiators. Conduct personnel dosimeter training. Update decommissioning logbook. Collect and process environmental soil, water, and vegetation samples.

Date of Discharge (Month and Year)	Total Quantity of Radioactivity Released (Curies)	Detectable Radio-Nuclides in the Waste	Specific Activity For Each Detectable Radionuclide in the Waste, Where The Release Concentration Was>1 x 10^{-7} (μCi ml^{-1})	Total Quantity of Each Detectable Radionuclide Released in the Waste (Curies)	Average Concentration Of Released Radioactive Material at the Point of Release (μCi ml^{-1})	Percent of Applicable Monthly Average Concentration for Released Radioactive Material (%)(2)	Total Volume of Liquid Effluent Released Including Diluent (gal)
September 2009	$1.46x10^{-2}$	H-3	$1.5x10^{-5}$	$1.46x10^{-2}$	$1.5x10^{-5}$	0.15	2,273
November 2009	$9.56x10^{-4}$	H-3	$1.18x10^{-6}$	$9.56x10^{-4}$	$1.15x10^{-6}$	0.01	1,857
March 2010	$6.42x10^{-3}$	H-3	$1.86x10^{-5}$	$6.42x10^{-3}$	$1.86x10^{-5}$	0.19	1,964
Annual Total for Radiation Center	$2.2x10^{-2}$	H-3	$3.48x10^{-5}$	$2.2x10^{-2}$	$3.48x10^{-5}$	0.35	1,094
OSTR Contribution to Above	$1.46x10^{-2}$	H-3	$1.5x10^{-5}$	$1.46x10^{-2}$	$1.5x10^{-5}$	0.15	2,273

(1) The OSU operational policy is to subtract only detector background from the water analysis data and not background radioactivity in the Corvallis city water.

(2) Based on values listed in 10 CFR 20, Appendix B to 20.1001 – 10.2401, Table 3, which are applicable to sewer disposal.

Table V.3

Annual Summary of Liquid Waste Generated and Transferred

Origin of Liquid Waste	Volume of Liquid Waste Packaged[1] (gallons)	Detectable Radionuclides in the Waste	Total Quantity of Radioactivity in the Waste (Curies)	Dates of Waste Pickup for Transfer to the Waste Processing Facility
TRIGA Reactor Facility	20	H-3, Na-24, Mn-54, Co-60, Sb-124, Ag-110m, Sb-122, Sc-46, Eu-152, Na-24, K-40, Rb-89	1.792×10^{-3}	8/24/09 1/19/10 4/6/10
Radiation Center Laboratories	0.13	Cl-137	8.0×10^{-8}	4/6/10
TOTAL	**20.13**		**1.792×10^{-3}**	

(1) OSTR and Radiation Center liquid waste is picked up by the Radiation Safety Office for transfer to its waste processing facility for final packaging.

Table V.4

Monthly TRIGA Reactor Gaseous Waste Discharges and Analysis

Month	Total Estimated Activity Released (Curies)	Total Estimated Quantity of Argon-41 Released(1) (Curies)	Estimated Atmospheric Diluted Concentration of Argon-41 at Point of Release (μCi/cc)	Fraction of the Technical Specification Annual Average Argon-41 Concentration Limit (%)
July	0.27	0.27	2.24×10^{-8}	0.56
August	0.18	0.18	1.47×10^{-8}	0.37
September	0.16	0.16	1.37×10^{-8}	0.34
October	0.14	0.14	1.12×10^{-8}	0.28
November	0.26	0.26	2.20×10^{-8}	0.55
December	0.34	0.34	2.78×10^{-8}	0.70
January	0.25	0.25	2.05×10^{-8}	0.51
February	0.27	0.27	2.49×10^{-8}	0.62
March	0.30	0.30	2.48×10^{-8}	0.62
April	0.30	0.30	2.50×10^{-8}	0.63
May	0.28	0.28	2.29×10^{-8}	0.57
June	0.27	0.17	2.27×10^{-8}	0.57
TOTAL ('09-'10)	**3.02**	**3.02**	**2.11×10^{-8}(2)**	**0.53(2)**

(1) Routine gamma spectroscopy analysis of the gaseous radioactivity in the OSTR stack discharge indicated the only detectable radionuclide was argon-41.

(2) Annual Average.

Table V.5

Annual Summary of Solid Waste Generated and Transferred

Origin of Solid Waste	Volume of Solid Waste Packaged[1] (Cubic Feet)	Detectable Radionuclides in the Waste	Total Quantity of Radioactivity in Solid Waste (Curies)	Dates of Waste Pickup for Transfer to the OSU Waste Processing Facility
TRIGA Reactor Facility	30	Eu-154, H-3, Na-24, Sc-46, Cr-51, Mn-54, Fe-59, Co-58, Co-60, Zn-65, As-74, Hf-181, Sb-124, Eu-152, Cs-134, Cs-137, Sc-46	8.92×10^{-4}	8/24/09 1/19/10 4/6/10
Radiation Center Laboratories	2	Np-237, Pu-239	2.0×10^{-7}	1/19/10
TOTAL	32	See Above	8.90×10^{-4}	---

(1) OSTR and Radiation Center laboratory waste is picked up by OSU Radiation Safety for transfer to its waste processing facility for final packaging.

Table V.6

Annual Summary of Personnel Radiation Doses Received

	Average Annual Dose[1]		Greatest Individual Dose[1]		Total Person-mrem For the Group[1]	
Personnel Group	**Whole Body (mrem)**	**Extremities (mrem)**	**Whole Body (mrem)**	**Extremities (mrem)**	**Whole Body (mrem)**	**Extremities (mrem)**
Facility Operating Personnel	63.71	212.71	39	478	446	1489
Key Facility Research Personnel	6.58	0	27	0	79	0
Facilities Services Maintenance Personnel	0.03	N/A	0.2	N/A	0.7	N/A
Laboratory Class Students	10.2	20.5	200	173	2000	553
Campus Police and Security Personnel	0.88	N/A	12	N/A	23	N/A
Visitors	0.17	N/A	4.8	N/A	62.2	N/A

(1) "N/A" indicates that there was no extremity monitoring conducted or required for the group.

Table V.7

Total Dose Equivalent Recorded on Area Dosimeters Located Within the TRIGA Reactor Facility

Monitor I.D.	TRIGA Reactor Facility Location (See Figure V.1)	Total Recorded	Dose Equivalent(1)(2)
		Xß(γ) (mrem)	Neutron (mrem)
MRCTNE	D104: North Badge East Wall	261	ND
MRCTSE	D104: South Badge East Wall	173	ND
MRCTSW	D104: South Badge West Wall	372	ND
MRCTNW	D104: North Badge West Wall	135	ND
MRCTWN	D104: West Badge North Wall	349	ND
MRCTEN	D104: East Badge North Wall	386	ND
MRCTES	D104: East Badge South Wall	1289	ND
MRCTWS	D104: West Badge South Wall	295	ND
MRCTTOP	D104: Reactor Top Badge	521	ND
MRCTHXS	D104A: South Badge HX Room	686	ND
MRCTHXW	D104A: West Badge HX Room	252	ND
MRCD-302	D302: Reactor Control Room	336	ND
MRCD-302A	D302A: Reactor Supervisor's Office	93	N/A
MRCBP1	D104: Beam Port Number 1	281	ND
MRCBP2	D104: Beam Port Number 2	280	ND
MRCBP3	D104: Beam Port Number 3	709	ND
MRCBP4	D104: Beam Port Number 4	396	ND

(1) The total recorded dose equivalent values do not include natural background contribution and, reflect the summation of the results of four quarterly beta-gamma dosimeters or four quarterly fast neutron dosimeters for each location. A total dose equivalent of "ND" indicates that each of the dosimeters during the reporting period was less than the vendor's gamma dose reporting threshold of 10 mrem or that each of the fast neutron dosimeters was less than the vendor's threshold of 10 mrem. "N/A" indicates that there was no neutron monitor at that location.

(2) These dose equivalent values do not represent radiation exposure through an exterior wall directly into an unrestricted area.

Table V.8

Total Dose Equivalent Recorded on Area Dosimeters Located Within the Radiation Center

Monitor I.D.	Radiation Center Facility Location (See Figure V.1)	Total Recorded Dose Equivalent(1)	
		Xß(γ) (mrem)	Neutron (mrem)
MRCA100	A100: Receptionist's Office	11	N/A

MRCB125N	B125: Gamma Analyzer Room (Storage Cave)	54	N/A
MRCN125S	B125: Gamma Analyzer Room	32	N/A
MRCC124	C124: Classroom	62	N/A
MRCC130	C130: Radioisotope Laboratory (Hood)	48	N/A
MRCD100	D100: Reactor Support Laboratory	88	ND
MRCD102	D102: Pneumatic Transfer Terminal Lab	181	ND
MRCD102-H	D102H: 1st Floor Corridor at D102	109	ND
MRCD106-H	D106H: 1st Floor Corridor at D106	231	N/A
MRCD200	D200: Reactor Administrator's Office	200	25
MRCD202	D202: Senior Health Physicist's Office	220	ND
MRCBRR	D200H: Rear Personnel Dosimetry Storage Rack	69	N/A
MRCD204	D204: Health Physicist Office	102	ND
MRCATHRL	F104: ATHRL	22	N/A
MRCD300	D300: 3rd Floor Conference Room	159	ND

(1) The total recorded dose equivalent values do not include natural background contribution and, reflect the summation of the results of four quarterly beta-gamma dosimeters or four quarterly fast neutron dosimeters for each location. A total dose equivalent of "ND" indicates that each of the dosimeters during the reporting period was less than the vendor's gamma dose reporting threshold of 10 mrem or that each of the fast neutron dosimeters was less than the vendor's threshold of 10 mrem. "N/A" indicates that there was no neutron monitor at that location.

Table V.9

Annual Summary of Radiation and Contamination Levels Observed Within the Reactor Facility and Radiation Center During Routine Radiation Surveys

Accessible Location (See Figure V.1)	Whole Body Radiation Levels (mrem/hr)		Contamination Levels(1) (dpm/cm^2)	
	Average	Maximum	Average	Maximum
TRIGA Reactor Facility:				
Reactor Top (D104)	1.1	90	<500	4,600
Reactor 2nd Deck Area (D104)	5.6	30	<500	<500
Reactor Bay SW (D104)	<1	11	<500	1,200
Reactor Bay NW (D104)	<1	60	<500	1,400
Reactor Bay NE (D104)	<1	40	<500	3,000
Reactor Bay SE (D104)	<1	14	<500	3,400
Class Experiments (D104, D302)	<1	<1	<500	<500
Demineralizer Tank & Make Up Water System (D104A)	<1	14	<500	800
Particulate Filter--Outside Shielding (D104A)	<1	3.7	<500	<500
Radiation Center:				
NAA Counting Rooms (A146, B100)	<1	1.2	<500	<500
Health Physics Laboratory (A138)	<1	<1	<500	<500
^{60}Co Irradiator Room and Calibration Rooms (A128, B120, A130)	<1	2.2	<500	<500
Radiation Research Labs (A126, A136) (B108, B114, B122, B124, C126, C130, C132A)	<1	4.6	<500	1,538
Radioactive Source Storage (B119, B119A, A120A, A132A)	<1	30	<500	<500
Student Chemistry Laboratory (C118)	<1	<1	<500	<500
Student Counting Laboratory (C120)	<1	<1	<500	<500
Operations Counting Room (B136, B125)	<1	1.2	<500	<500
Pneumatic Transfer Laboratory (D102)	<1	6	<500	<500
RX support Room (D100)	<1	<1	<500	1,400

(1) <500 dpm/100 cm2 = Less than the lower limit of detection for the portable survey instrument used.

Table V.10

Total Dose Equivalent at the TRIGA Reactor Facility Fence

Fence Environmental Monitoring Station (See Figure V.1)	Total Recorded Dose Equivalent (Including Background) Based on GSD TLDs[1, 2] (mrem)
MRCFE-1	86 ± 3
MRCFE-2	80 ± 4
MRCFE-3	75 ± 6
MRCFE-4	84 ± 5
MRCFE-5	79 ± 4
MRCFE-6	76 ± 3
MRCFE-7	81 ± 5
MRCFE-8	80 ± 6
MRCFE-9	79 ± 4

(1) Average Corvallis area natural background using GDS TLDs totals 73 ± 10 mrem for the same period.

(2) ± values represent the standard deviation of the total value at the 95% confidence level.

Table V.11

Total Dose Equivalent at the Off-Site Gamma Radiation Monitoring Stations

Off-Site Radiation Monitoring Station (See Figure V.1)	Total Recorded Dose Equivalent (Including Background) Based on GDS TLDs[1, 2] (mrem)
MRCTE-2	81 ± 5
MRCTE-3	86 ± 4
MRCTE-4	79 ± 5
MRCTE-5	88 ± 5
MRCTE-6	73 ± 6
MRCTE-7	79 ± 4
MRCTE-8	89 ± 5
MRCTE-9	84 ± 7
MRCTE-10	69 ± 2
MRCTE-12	96 ± 8
MRCTE-13	86 ± 5
MRCTE-14	83 ± 4
MRCTE-15	83 ± 14
MRCTE-16	84 ± 5
MRCTE-17	79 ± 6
MRCTE-18(3)	79 ± 4
MRCTE-19	78 ± 5
MRCTE-20	77 ± 5
MRCTE-21	68 ± 5
MRCTE-22	74 ± 6

(1) Average Corvallis area natural background using GDS TLDs totals 73 ± 10 mrem for the same period.
(2) ± values represent the standard deviation of the total value at the 95% confidence level.
(3) Only three quarters are reported.

Table V.12

Annual Average Concentration of the Total Net Beta Radioactivity (minus ^3H) for Environmental Soil, Water, and Vegetation Samples

Sample Location (See Fig. V.1)	Sample Type	Annual Average Concentration Of the Total Net Beta (Minus ^3H) Radioactivity(1)	Reporting Units
1-W	Water	no water(2)	μCi ml^{-1}
4-W	Water	no water(2)	μCi ml^{-1}
11-W	Water	$6.34x10^{-6}$(2)	μCi ml^{-1}
19-RW	Water	$6.34x10^{-6}$(2)	μCi ml^{-1}
3-S	Soil	$4.78x10^{-5} \pm 7.65x10^{-6}$	μCi g^{-1} of dry soil
5-S	Soil	$1.39x10^{-5} \pm 5.68x10^{-6}$	μCi g^{-1} of dry soil
20-S	Soil	$2.59x10^{-5} \pm 6.02x10^{-6}$	μCi g^{-1} of dry soil
21-S	Soil	$2.46x10^{-5} \pm 6.20x10^{-6}$	μCi g^{-1} of dry soil
2-G	Grass	$3.19x10^{-4} \pm 3.05x10^{-5}$	μCi g^{-1} of dry ash
6-G	Grass	$2.21x10^{-4} \pm 2.46x10^{-5}$	μCi g^{-1} of dry ash
7-G	Grass	$3.90x10^{-4} \pm 3.03x10^{-5}$	μCi g^{-1} of dry ash
8-G	Grass	$3.51x10^{-4} \pm 2.73x10^{-5}$	μCi g^{-1} of dry ash
9-G	Grass	$2.72x10^{-4} \pm 2.62x10^{-5}$	μCi g^{-1} of dry ash
10-G	Grass	$2.06x10^{-4} \pm 2.38x10^{-5}$	μCi g^{-1} of dry ash
12-G	Grass	$8.61x10^{-5} \pm 9.34x10^{-6}$	μCi g^{-1} of dry ash
13-G	Grass	$33.37x10^{-4} \pm 3.36x10^{-5}$	μCi g^{-1} of dry ash
14-G	Grass	$1.30x10^{-4} \pm 3.23x10^{-5}$	μCi g^{-1} of dry ash
15-G	Grass	$1.21x10^{-4} \pm 2.21x10^{-5}$	μCi g^{-1} of dry ash
16-G	Grass	$3.69x10^{-4} \pm 3.15x10^{-5}$	μCi g^{-1} of dry ash
17-G	Grass	$2.09x10^{-4} \pm 1.86x10^{-5}$	μCi g^{-1} of dry ash
18-G	Grass	$3.36x10^{-4} \pm 2.27x10^{-5}$	μCi g^{-1} of dry ash
22-G	Grass	$1.51x10^{-4} \pm 1.59x10^{-5}$	μCi g^{-1} of dry ash

(1) ± values represent the standard deviation of the value at the 95% confidence level.
(2) Less than lower limit of detection value shown.

Table V.13

Beta-Gamma Concentration and Range of LLD Values for Soil, Water, and Vegetation Samples

Sample Type	Average Value	Range of Values	Reporting Units
Soil	1.26×10^{-5}	1.19×10^{-5} to 1.38×10^{-5}	$\mu Ci\ g^{-1}$ of dry soil
Water	6.34×10^{-6} (1)	6.34×10^{-6} (1)	$\mu Ci\ ml^{-1}$
Vegetation	3.80×10^{-5}	1.46×10^{-5} to 6.47×10^{-5}	$\mu Ci\ g^{-1}$ of dry ash

(1) Less than lower limit of detection value shown.

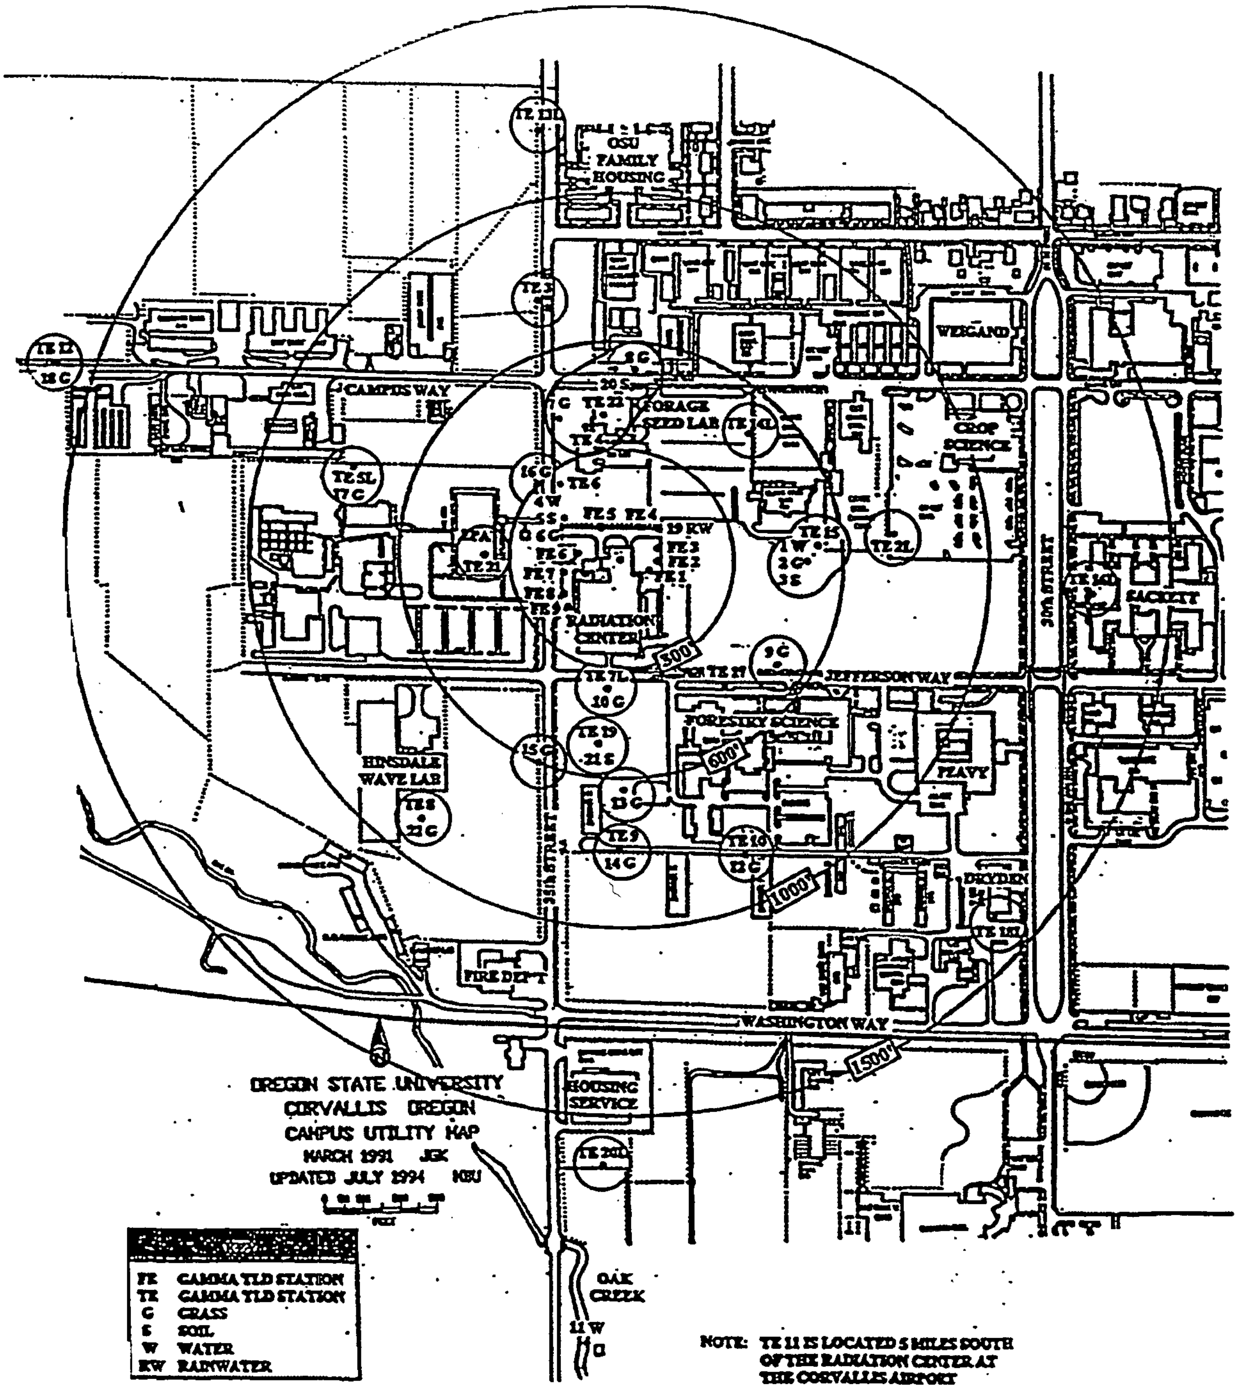
Monitoring Stations for the OSU TRIGA Reactor



Work

Summary

The Radiation Center offers a wide variety of resources for teaching, research, and service related to radiation and radioactive materials. Some of these are discussed in detail in other parts of this report. The purposeof this section is to summarize the teaching, research, and service efforts carried out during the current reporting period.

Teaching

An important responsibility of the Radiation Center and the reactor is to support OSU's academic programs. Implementation of this support occurs through direct involvement of the Center's staff and facilities in the teaching programs of various departments and through participation in University research programs. Table III.2 plus the "Training and Instuction" section (see next page) provide detailed information on the use of the Radiation Center and reactor for instruction and training.

Research and Service

Almost all Radiation Center research and service work is tracked by means of a project database. When a request for facility use is received, a project number is assigned and the project is added to the database. The database includes such information as the project number, data about the person and institution requesting the work, information about students involved, a description of the project, Radiation Center resources needed, the Radiation Center project manager, status of individual runs, billing information, and the funding source.

Table VI.1 provides a summary of institutions which used the Radiation Center during this reporting period. This table also includes additional information about the number of academic personnel involved, the number of students involved, and the number of uses logged for each organization. Details on graduate student research which used the Radiation Center are given in Table VI.2.

The major table in this section is Table VI.3. This table provides a listing of the research and service projects carried out during this reporting period and lists information relating to the personnel and institution involved, the type of project, and the funding agency. Projects which used the reactor are indicated by an asterisk. In addition to identifying specific projects carried out during the current reporting period, Part VI also highlights major Radiation Center capabilities in research and service. These unique Center functions are described in the following text.

Neutron Activation Analysis

Neutron activation analysis (NAA) stands at the forefront of techniques for the quantitative multi-element analysis of major, minor, trace, and rare elements. The principle involved in NAA consists of first irradiating a sample with neutrons in a nuclear reactor such as the OSTR to produce specific radionuclides. After the irradiation, the characteristic gamma rays emitted by the decaying radionuclides are quantitatively measured by suitable semiconductor radiation detectors, and the gamma rays detected at a particular energy are usually indicative of a specific radionuclide's presence. Computerized data reduction of the gamma ray spectra then yields the concentrations of the various elements in samples being studied. With sequential instrumental NAA it is possible to measure quantitatively about 35 elements in small samples (5 to 100 mg), and for activable elements the lower limit of detection is on the order of parts per million or parts per billion, depending on the element.

The Radiation Center's NAA laboratory has analyzed the major, minor, and trace element content of tens of thousands of samples covering essentially the complete spectrum of material types and involving virtually every scientific and technical field.

While some researchers perform their own sample counting on their own or on Radiation Center equipment, the Radiation Center provides a complete NAA service for researchers and others who may require it. This includes sample preparation, sequential irradiation and counting, and data reduction and analysis.

Data on NAA research and service performed during this reporting period are included in Table VI.3.

Irradiations

As described throughout this report, a major capability of the Radiation Center involves the irradiation of a large variety of substances with gamma rays and neutrons. Detailed data on these irradiations and their use are included in Part III as well as in the "Research & Service" text of this section.

Radiological Emergency Response Services

The Radiation Center has an emergency response team capable of responding to all types of radiological accidents. This team directly supports the City of Corvallis and Benton County emergency response organizations and medical facilities. The team can also provide assistance at the scene of any radiological incident anywhere in the state of Oregon on behalf of the Oregon Radiation Protection Services and the Oregon Department of Energy.

The Radiation Center maintains dedicated stocks of radiological emergency response equipment and instrumentation. These items are located at the Radiation Center and at the Good Samaritan Hospital in Corvallis.

During the current reporting period, the Radiation Center emergency response team conducted several training sessions and exercises, but was not required to respond to any actual incidents.

Training and Instruction

In addition to the academic laboratory classes and courses discussed in Parts III, and VI, and in addition to the routine training needed to meet the requirements of the OSTR Emergency Response Plan, Physical Security Plan, and operator requalification program, the Radiation Center is also used for special training programs. Radiation Center staff are well experienced in conducting these special programs and regularly offer training in areas such as research reactor operations, research reactor management, research reactor radiation protection, radiological emergency response, reactor

behavior (for nuclear power plant operators), neutron activation analysis, nuclear chemistry, and nuclear safety analysis.

Special training programs generally fall into one of several categories: visiting faculty and research scientists; International Atomic Energy Agency fellows; special short-term courses; or individual reactor operator or health physics training programs. During this reporting period there were a large number of such people as shown in Part II.

As has been the practice since 1985, Radiation Center personnel annually present a HAZMAT Response Team Radiological Course. This year the course was held at Oregon State University.

Radiation Protection Services

The primary purpose of the radiation protection program at the Radiation Center is to support the instruction and research conducted at the Center. However, due to the high quality of the program and the level of expertise and equipment available, the Radiation Center is also able to provide health physics services in support of OSU Radiation Safety and to assist other state and federal agencies. The Radiation Center does not compete with private industry, but supplies health physics services which are not readily available elsewhere. In the case of support provided to state agencies, this definitely helps to optimize the utilization of state resources.

The Radiation Center is capable of providing health physics services in any of the areas which are discussed in Part V. These include personnel monitoring, radiation surveys, sealed source leak testing, packaging and shipment of radioactive materials, calibration and repair of radiation monitoring instruments (discussed in detail in Part VI), radioactive waste disposal, radioactive material hood flow surveys, and radiation safety analysis and audits.

The Radiation Center also provides services and technical support as a radiation laboratory to the State of Oregon Radiation Protection Services (RPS) in the event of a radiological emergency within the state of Oregon. In this role, the Radiation Center will provide gamma ray spectrometric analysis of water, soil, milk, food products, vegetation, and air samples collected by RPS radiological response field teams. As part of the ongoing preparation for this emergency support, the Radiation Center participates in inter-institution drills.

Radiological Instrument Repair and Calibration

While repair of nuclear instrumentation is a practical necessity, routine calibration of these instruments is a licensing and regulatory requirement which must be met. As a result, the Radiation Center operates a radiation instrument repair and calibration facility which can accommodate a wide variety of equipment.

The Center's scientific instrument repair facility performs maintenance and repair on all types of radiation detectors and other nuclear instrumentation. Since the Radiation Center's own programs regularly utilize a wide range of nuclear instruments, components for most common repairs are often on hand and repair time is therefore minimized.

In addition to the instrument repair capability, the Radiation Center has a facility for calibrating essentially all types of radiation monitoring instruments. This includes typical portable monitoring instrumentation for the detection and measurement of alpha, beta, gamma, and neutron radiation, as well as instruments designed for low-level environmental monitoring. Higher range instruments for use in radiation accident situations can also be calibrated in most cases. Instrument calibrations are performed using radiation sources certified by the National Institute of Standards and Technology (NIST) or traceable to NIST.

Table VI.4 is a summary of the instruments which were calibrated in support of the Radiation Center's instructional and research programs and the OSTR Emergency Plan, while Table VI.5 shows instruments calibrated for other OSU departments and non-OSU agencies.

Consultation

Radiation Center staff are available to provide consultation services in any of the areas discussed in this Annual Report, but in particular on the subjects of research reactor operations and use, radiation protection, neutron activation analysis, radiation shielding, radiological emergency response, and radiotracer methods.

Records are not normally kept of such consultations, as they often take the form of telephone conversations with researchers encountering problems or planning the design of experiments. Many faculty members housed in the Radiation Center have ongoing professional consulting functions with various organizations, in addition to sitting on numerous committees in advisory capacities.

Public Relations

The continued interest of the general public in the OSTR is evident by the number of people who have toured the facility. See Table VI.6 for statistics on scheduled visitors.

Listing of Major Research and Service Projects Preformed or in Progress at the Radiation Center and Their Funding Agencies

Project	Users	Organization Name	Project Title	Description	Funding
1687	Teaching and Tours	Inavale Grade School	Reactor Tour	General reactor tour	USDOE Reactor Sharing
1690	Teaching and Tours	Wilson High School	Reactor Tour	D300 Reactor Tour	USDOE Reactor Sharing
1691	Teaching and Tours	Lost River High School	Reactor Tour	D300 Reactor Tour	USDOE Reactor Sharing
1692	Choi	Arch Chemicals Inc.	Screening Tests of Wood Decay	This is to build up basic knowledge on the efficacy of a copper based preservative in preventing decay of wood inhabiting basidiomycetes.	Arch Chemical Inc.
1695	Teaching and Tours	Transitional Learning	Reactor Tour	Reactor Tour in D300 only	USDOE Reactor Sharing
1696	Sayer	Marquess & Associates Inc.	Instrument Calibration	Instrument calibration	Marquess & Associates Inc.
1697	Teaching and Tours	Crescent Valley High School	Crescent Valley High School AP Physics Class	This project supports the advanced placement physics class at Cresent Valley High School. It will utilize the reactor in ongoing research projects sponsored by Radiation Center staff.	USDOE Reactor Sharing
1699	Teaching and Tours	Philomath High School	Reactor Tour	Tour of NAA and gas chromatograph capabilities in the Radiation Center	USDOE Reactor Sharing
1700	Frantz	Reed College	Instrument calibration	Instrument calibration	Reed College
1714		Lebanon Community Hospital	Instrument Calibration		Lebanon Community Hospital
1717	Baldwin	Syracuse University	Ar/Ar Dating	Ar/Ar Dating	Syracuse University
1718	Armstrong	California State University at Fullerton	Fission Track Dating	Fission track age dating of apatite grains .	Department of Geological Sciences
1719	Teaching and Tours	Portland Community College	Upward Bound	OSTR Tour for Upward Bound	USDOE Reactor Sharing
1720	Teaching and Tours	Saturday Academy	OSTR Tour	OSTR Tour	USDOE Reactor Sharing
1726	Teaching and Tours	Oregon State University - Educational Tours	Academic Learning Services	Cohort Class 199	USDOE Reactor Sharing

Table VI.3 (continued)
Listing of Major Research and Service Projects Preformed or in Progress at the Radiation Center and Their Funding Agencies

Project	Users	Organization Name	Project Title	Description	Funding
1730	Reese	Oregon State University	Neutron Radiography	Neutron Radiography using the real-time and film imaging methods	OSU Radiation Center
1737	Roullet	Oregon Health Sciences University	Silver Activation for Radiolabel	Production of Ag-110m for Radiolabeled Molecules	Oregon Health Sciences University
1739	Teaching and Tours	Daly Middle School	Reactor Tour	Reactor Tour	USDOE Reactor Sharing
1743	Teaching and Tours	West Salem High School	Reactor Tour	Reactor Tour	USDOE Reactor Sharing
1745	Girdner	US National Parks Service	C14 Measurements	LSC analysis of samples for C14 measurements.	US National Parks Service
1747	Teaching and Tours	East Linn Christian Academy	Reactor Tour	Reactor Tour for Chemistry Class	USDOE Reactor Sharing
1749	Bottomley	Oregon State University	Hot Spots of Nitrogen Cycling in Soil	Grant is focused upon nitrogen cycling in soil at the small scale. We are trying to understand how physical and biological parameters control the fate of ammonium and nitrate in soil.	OSU Crop and Soil Science
1758	Teaching and Tours	Oregon State University - Educational Tours	Kids Spirit	OSTR tour	USDOE Reactor Sharing
1763	Svojtka	Academy of Sciences of the Czech Republic	Fission Track	Fission Track	Academy of Sciences of the Czech Republic
1765	Beaver	Weyerhaeuser	Instrument Calibration	Calibration of radiological instruments.	Weyerhaeuser Foster
1766	Cosca	Universite de Lausanne	Ar/Ar Geochronology		Universite de Lausanne, Humense
1767	Korlipara	Terra Nova Nurseries, Inc.	Genera Modifications using gamma Irradiation	Use of gamma and fast neutron irradiations for genetic studies in genera.	Terra Nova Nurseries, Inc.
1768	Bringman	Brush-Wellman	Antimony Source Production	Production of Sb-124 sources	Brush-Wellman
1771	Otjen	Oregon State Fire Marshal	Instrument calibration	Calibration of radiological response kits	Oregon State Fire Marshall
1777	Storey	Quaternary Dating Laboratory	Quaternary Dating	Production of Ar-39 from K-39 to determine radiometric ages of geological materials.	Quaternary Dating Laboratory

Table VI.3 (continued)
Listing of Major Research and Service Projects Preformed or in Progress at the Radiation Center and Their Funding Agencies

Project	Users	Organization Name	Project Title	Description	Funding
1778	Gislason	Genis, Inc.	Gamma Exposure of Chitosan polymer	This project subjects chitosan polymer in 40 and 70% DDA formulations to 9 and 18 Kgy, boundary doses for commerical sterilization for the purpose of determine changes in the molecular weight and product formulation properites.	Genis, Inc.
1779	Teaching and Tours	Lebanon High School	Teaching and tours	OSTR tour.	USDOE Reactor Sharing
1781	Balogh	Roswell Park Cancer Institute	INAA of Au nanocomposites.	INAA to determine biodistribution Au nanocomposites in mouse tissue samples.	Department of Defense, Roswell Park Cancer Institu
1783	Amrhein	Amrhein Associates, Inc	Instrument Calibration	Instrument calibration	Amrhein Associates, Inc.
1786	Teaching and Tours	Oregon State University - Educational Tours	Anthropology Department	Anth 430/530 NAA class with Minc	OSU Radiation Center
1790	Teaching and Tours	Oregon State University - Educational Tours		OSTR Tour	
1791	Teaching and Tours	Oregon State University - Educational Tours		RX Tour	
1794	O'Kain	Knife River	Instrument Calibration	Instrument calibration	Tangent Construction
1795	Zubek	Eugene Sand & Gravel, Inc	Instrument Calibration	Instrument calibration	
1796	Hardy	CH2M Hill Inc	Instrument Calibration	Instrument calibration	
1797	Teaching and Tours	Oregon State University - Educational Tours		RX Tour	
1806	Davis	Oregon State University	INAA of Chert	Trace-element analysis of geological and artifactual chert from the Lower Salmon River Canyon of Idaho to establish provenance.	DOE University Reactor Share
1815	Hamby	Oregon State University	Proof of Concept for Beta/Gamma Coincindent Counting	Cobalt source for simultaneous beta/gamma spectroscopy. Production of radionuclides for detector operability check.	OSU NERHP, Hamby

Table VI.3 (continued)
Listing of Major Research and Service Projects Preformed or in Progress at the Radiation Center and Their Funding Agencies

Project	Users	Organization Name	Project Title	Description	Funding
1817	Costigan	City of Gresham	Instrument Calibration	Calibration of instruments	City of Gresham
1818	Sabey	Brush Wellman	Antimony source production (Utah)		Brush-Wellman
1819	Vetter	University of California at Berkeley	NE-104A INAA source	Stainless Steel disk source for INAA lab.	University of California at Berkeley
1820	Jolivet	Universite Montpellier II	Fission Track Analysis	Use of fission track analysis for geochronology.	University of Montpellier II
1824	Kounov	University of Basel	Fission Track Analysis	Low temperature thermochronology is being used to answer questions relating in general to tectonics and basin analysis. The current project covers studies in Madagascar, southern India, Sri Lanka where they are trying to understand what happened to the	Geologisches Institut, ETH Zentrum
1825	Peterson	Oregon State University	INAA of Oregon pottery	Trace-element analysis to determine provenance of historic Oregon pottery.	DOE University Reactor Share
1826	Teaching and Tours	North Eugene High School		OSTR Tour and half-life experiment	USDOE Reactor Sharing
1827	Teaching and Tours	Stayton High School		OSTR Tour and half-life experiment	USDOE Reactor Sharing
1828	Teaching and Tours	Lincoln High School		OSTR Tour and half-life experiment	USDOE Reactor Sharing
1829	Rauch	Nu-Trek, Inc	RADFET dosimeter calibration and testing	RADFET dosimeter calibration and testing using gamma and neutron sources.	Nu-Trek, Inc.
1831	Thomson	University of Arizona	Fission Track	Fission track thermochronometry of the Patagonian Andes and the Northern Apennines, Italy	Yale University
1836	Hartman	University of Michigan	University of Michigan Nuclear Engineering & Radiological Science Class Labs	Various irradiations to support student laboratories at the University of Michigan.	University of Michigan
1837	Sterbentz	Idaho National Laboratory	Zirconium Reactivity Measurement	Measurement of reactivity worth of Zr slabs doped with gadolinium.	Idaho National Laboratory
1840	Burgess	University of Manchester	Ar/Ar Dating	Production of Ar-39 from K-39 for Ar-40/Ar-39 dating of geological samples	University of Manchester
1841	Swindle	University of Arizona	Ar/Ar dating of ordinary chondritic meterorites	Ar/Ar dating of ordinary chondritic meterorites	University of Arizona

Table VI.3 (continued)
Listing of Major Research and Service Projects Preformed or in Progress at the Radiation Center and Their Funding Agencies

Project	Users	Organization Name	Project Title	Description	Funding
1842	Higley	Oregon State University	Isotope production for decontamination studies	Study of removal of various isotopes from various surfaces by gel decontaminant.	OSU NERHP
1843	Fletcher	Empiricos LLC	Instrument Calibration	Instrument calibration	Empiricos LLC
1845	Alden	University of Michigan	INAA of Ancient Iranian Ceramics	Trace-element of analysis of ceramics and clays from ancient Iran to monitor trade and exchange.	Oriental Institute, University of Chicago
1847	Higley	Oregon State University	Ultra-trace uptake studies for allometric studies	NAA of ultra-trace elements in plant samples for application in allometric studies	NERHP CRESP Grant
1848	Hartman	University of Michigan	Development of Prompt Gamma Neutron Activation Analysis at the OSTR	Development of a PGNAA beam line on beam port #4.	OSU Radiation Center
1849	Converse	Sonoma State University	INAA of Bricks from Historic Fort Vancouver	Trace-element analysis of bricks from historic Fort Vancouver to determine provenance.	OSU Radiation Center
1850	Mueller	Argonne National Laboratory	Ar-39 Isotope Production	Production of Ar-39 for use as standards for Ar/Ar geochronology	Argonne National Laboratory Physics Division
1851	Chappell	Oregon State University	Circadian regulation of gonadotropin-releasing hormone		OSU Zoology
1852	McGuire	Oregon State University	Antimicrobial activity of silanized silica microspheres with covalently attached PEO-PPO-PEO	co-polymer and nisin association. The project is aimed at finding effective methods for coating surfaces to enhance protein repellant activity and antimicrobial activity using nisin.	Chemical,Biological & Env Engr
1853	Ivestor	Grande Ronde Hospital	Instrument Calibration	Instrument calibration	Grande Ronde Hospital
1854	Loveland	Oregon State University	Radiation Stability of Targets	To determine material loss of thin U238 tagets.	OSU Chemistry / Loveland DOE
1855	Anczkiewicz	Polish Academy of Sciences	Fission Track Services	Verification of AFT data for illite-mechte data	Polish Academy of Sciences
1856	Becker	University of Michigan	INAA of samples from PML site.	Activation of soils and concrete from Phoenix Memorial Lab and FNR site.	OSU Radiation Center
1857	Idleman	Lehigh University	Fission Track Services		Lehigh University
1858	Arbogast	Gene Tools, LLC	Instrument Calibration	Calibration of instruments	Gene Tools, LLC
1859	Morris	A. M. Todd Company Inc.	Gamma Irradiation for Crop Mutation Breeding	Treat different plant tissues including cuttings, rhizomes, and callus at different gamma irradiation dosages in order to obtain useful mutants with beneficial characteristics.	A.M. Todd Company Inc.

Table VI.3 (continued)
Listing of Major Research and Service Projects Preformed or in Progress at the Radiation Center and Their Funding Agencies

Project	Users	Organization Name	Project Title	Description	Funding
1860	Minc	Oregon State University	INAA of Archaeological Ceramics	Trace-element analysis of archaeological ceramics.	OSU Radiation Center
1861	Page	Lund University	Lund University Geochronology	Ar/Ar Geochronology	Lund University
1862	Reese	Oregon State University	Coolant Temperature Measurements	Measurement of the primary coolant temperatures in the primary tank.	
1863	Chew	Trinity College	Fission Track dating of Peruvian Andes and East African Rift	Use of fission track to determine U content of samples from the Peruvian Andes and the East African Rift.	Trinity College, Ireland
1864	Gans	University of California at Santa Barbara	Ar-40/Ar-39 Sample Dating	Production of Ar-39 from K-40 to determine radiometric ages of geologic samples.	University of California at Santa Barbara
1865	Carrapa	University of Wyoming	Fission Track Irradiations	Apatite fission track to reveal the exhumation history of rocks from the ID-WY-UY postion of the Sevier fold and thrust belt, Nepal, and Argentina.	University of Wyoming
1866	Smith	Pacific Northwest National Laboratory	Irradiation of Uranium Foil	Gather data with detection and spectroscopic equipment on fission products produced by an irradiated uranium foil	Pacific Northwest National Laboratory
1867	Paulenova	Oregon State University	Uranium Coating Studies	Surface dynamics and morphology at nanometer and micrometer scale of uranium and backing materials irradiated by thermal neutrons.	OSU Radiation Center
1868	Teaching and Tours	Springfield High School		OSTR Tour and half-life experiment	OSU Radiation Center
1869	Spence	Richard Spence	INAA of Trace Metals	Trace-element analyis of metal samples for precious metals.	Richard Spence
1870	Slavens	USDOE Albany Research Center	Sample Identification	Determination of radioisotopic composition from various unknown samples	USDOE Albany Research Center
1871	Arp	Oregon State University	Isolation of Soil Archaeal Ammonia Oxidizers	Recent discovery of autotrophic ammonia oxidizing archaea and their ubiquity in aquatic and terrestrial environments suggests that they have a major role in global biogeochemical cycles. We are trying to isolate ammonia oxidizing archaea from soil in a ho	OSU Botany & Plant Pathology
1872	Hartman	University of Michigan	Evaluation of Borohydride Compounds Using PGNAA	Utilization of PGNAA to evaluate the material content of various borohydride compounds.	University of Michigan
1873	Hines	Washington State University	Fission Chamber Refurbishment	Refurbishment of a fission chamber for transfer and use at Washington State University	Washington State University

Table VI.3 (continued)

Listing of Major Research and Service Projects Preformed or in Progress at the Radiation Center and Their Funding Agencies

Project	Users	Organization Name	Project Title	Description	Funding
1874	Williams	Oregon State University	Chemoprotection by dietary agents in vivo against a xenograft of human T-cell leukemia	Diindolylmethane (DIM), the primary acid condensation product of indole-3-carbinol (I3C), has been shown to be an effective chemoprotective agent in vitro against a human T-cell lymphoblastic leukemia cell line, CCRF-CEM. This project will test the abili	OSU Linus Pauling Institute
1875	Hosmer	102nd Oregon Civil Support Unit	Instrument Calibration	Calibration of instruments	102nd Oregon Civil Support Unit
1876	Reese	Oregon State University	Utilization of the Prompt Gamma Neutron Activation Analysis Facility	Development and utilization of the Prompt Gamma Neutron Activation Analaysis Facility for use as a user facility	
1877	Iwaniec	Oregon State University	Skeletal Response to Leptin	Leptin, the protein product of the ob gene, acts on multiple organs, including bone. We will test the hypothesis that leptin has peripheral-mediated as well as hypothalamic-mediated actions on bone. In this experiment, will assess the skeletal effect of	Department of Nutrition and Exercise Sciences
1878	Roden-Tice	Plattsburgh State University	Fission-track research	Use of fission tracks to detrmine location of 235U, 232Th in natural rocks and minerals	Plattsburgh State University
1879	Gregory	Oregon Biomedical Engineering Institute	AHA/AHADD		Oregon Biomedical Engineering Institute
1880	Merrill	Oregon State University	Selenium, Thioredoxin Reductase and Cancer	Determine whether deletion of the geme encoding thioredoxin reductase in liver 1)increases or decreases the rate of liver cancer, 2)impacts the cancer-preventive activity of dietary selenium, 3)effects the pathways by wich cells protect themselves from oxicative stress and cancer	OSU Biochemistry & Biophysics
1881	Tanguay	Oregon State University	Nanoparticle Uptake in Zebrafish Embryos	INAA to determine the uptake of various metals (Ag, Cu, Co) in nanocomposite from by zebrafish embryos	
1882	Bray	Wayne State University	INAA of Archaeological Ceramics from South America	Trace-element analysis of Inca-perios ceramics for provenance determination	Wayne State University
1883	Wright	University of Michigan	The Uruk Expansion	INAA of ceramics from Uruk-period sites in Mesopotamia and adjacent areas	OSU Radiation Center
1884	Contreras	Oregon State University	Mutation breeding of Prunus laurocerasus	Cherrylaurel is desired as a screening plant for its attractive foliage and dense growth; however, its prolific fruit loads contribute to litter and have begun to invade natural areas. The current project is designed to identify the LD50 rate of gamma irradiation so that large seed lots may be irradiated in order to develop novel phenotypes that exhibit reduced fertility or sterility	OSU Horticulture

Table VI.3 (continued)
Listing of Major Research and Service Projects Preformed or in Progress at the Radiation Center and Their Funding Agencies

Project	Users	Organization Name	Project Title	Description	Funding
1885	Mireles	Umpqua Research Company	Water Sample Analysis	Analyze water samples using the LSC to determine if tritium is the same in all samples	Umpqua Research Company
1886	Coutand	Dalhousie University	Fission Track Irradiation	Fission track irradiations of apatite samples	Dalhousie University
1887	Farsoni	Oregon State University	Xenon Gas Production	Production of xenon gas	OSU NERHP
1888	Misner	Pacific Northwest National Laboratory	Detection of short-lived fission products	Utilization fo the PGNAA fast shutter to observe short-lived fission products	Pacific Northwest National Laboratory
1889	Paulenova	Oregon State University	Hydrolysis and Radiolysis of synergistic extractants	The goal of this project is to determine the effects of hydrolysis and radiolysis on the extraction ability of a diamide and chlorinated cobalt dicarbollide (CCD). CCD and the diamide are synergistic extractants and will be together in solution for hydrolysis and radiolysis experiments. Effects will be measured with IR spectroscopy and extraction distribution ratios	OSU Radiation Center
1890	Price	Boeing	Neutron Radiography of Electronic Components	Utilizazation of neutron radiography to examine various electronic componentents to detect manufacturing defects	Boeing
1891	Reese	Oregon State University	Development of a Neutron Depth Profiling Instrument	Development and use of a Neutron Depth Profiling instrument in conjunction with PGNAA facility	
1892	Vildirim	University of Cincinnati	INAA of Koru ore deposits	Geology of Pb-Zn deposits in Koru area of Canakkale, Turkey	Istanbul Technical University
1893	Mueller	University of Oregon	Soil Sterilization	Sterilization of soils to remove microorganisns (i.e., fungi) without altering abiotic conditions	University of Oregon
1894	Greene	University of Chicago	INAA of Late Bronze-Age Ceramics, Armenia	Trace-element analyses of ceramics from Tsaghkahovit, Armenia, to determine provenance	University of Chicago
1895	Filip	Academy of Sciences of the Czech Republic	Bojemian Massif	Fission-track dating	Academy of Sciences of the Czech Republic
1896	Hamby	Oregon State University	Beta Source Creation Through Activation	Activation of various materials for beta radiation sources used in the development of beta spectroscopy instrumentation	OSU NERHP
