Subject: RE: Powertech (USA) Inc.; Dewey-Burdock Project

Powertech cannot start milling until it receives all appropriate permits/ license from state and federal agencies such as the NRC and the South Dakota Department of Natural Resources. In order for Powertech to get a source material license from the NRC, the NRC must first complete the Environmental and Safety assessments of the proposed action to ensure public health and safety is not compromised.

If you would like to get additional information regarding Powertech's proposed action, you can log into the ADAMS Public Electronic Reading Room, which is accessible through the NRC public website (or via <http://wba.nrc.gov:8080/ves/>) and use the document number 04009075 (for Powertech) to search for related documents.

Thank you for your quick and informative response. I very much appreciate it. Am I correct that PowerTech can not begin Mining until the SEIS is completed and the results are favorable to mining?

Thank you for your interest in the Dewey-Burdock project. The NRC is still in the process of conducting our independent analysis and has not made any decisions yet. The NRC will document its analysis in a draft SEIS which will be published for public comment when it becomes available. The NRC is currently anticipating to have the draft SEIS completed by early summer of 2011. If you have any additional questions please feel free to contact me.

Sincerely
