Yes they did submit an earlier application. One of their lines was down at that time and they could not submit the most current data on that process until they had permission to use that line again.

Ms. Brown,

Thank you for responding. Just to clarify one thing. You stated that NFS had submitted a complete renewal application in September. With the existing permit to have expired at the end of August, did NFS submit an application prior to the end of August or was the September submittal the first from NFS?

Thank you,

James Park, Project Manager

U.S. Nuclear Regulatory Commission

Mr. Park,

Nashville received a complete NFS NPDES application on September 20, 2010. The target Public Notice date for the new permit is December 20, 2010. NFS will continue to operate under their old permit until the new one is issued.

Ms. Brown,

I have noticed that the NPDES permit for Nuclear Fuel Services, Inc. (TN0002038) was to expire on August 31, 2010. I was wondering if you could confirm that NFS had applied to renew its NPDES permit and the date of that submittal to the State. Also, has the State completed its review of the NFS renewal

application, is it was submitted?

Thank you,
James Park, Project Manager
U.S. Nuclear Regulatory Commission

James,

Here is a copy of the NFS NPDES permit.

Thanks,
Beverly Brown
