I have sent my comment by mail this will replace my comment mailed to your offices:

I am concerned about the impact this proposed nuclear plant will have on our wildlife which is presently undisturbed.

My son who was sitting in his deer stand observing different bird species was surprised to see an American bald eagle, (a symbol for our USA) land in a tree on our property. (We are 3 miles from the proposed plant site.) The American bald eagle stayed awhile then flew off. My son is 50 years old this is the first time he has seen a bald eagle in the wild.

We know that bald eagles nest on ranch land near the proposed "heavy haul road". The lady at the NRC meeting spoke of the archaeologist finds on their ranch that was destroyed when Exelon came on their property. The proposed plant site would be near century's old undisturbed land. This part of TX has a lot of history and especially this area. Just yesterday in the Victoria Advocate Dec. 29, 2010, section B, page 1, "Historians try to prove that historic trail linking presidios did pass through Victoria Co."

Another great concern the whooping cranes and our bays and estuaries that can be ruined by this plant location. What about terrain and the possibility of subsidence? What about the heat from the cooling pond? Will it change our weather conditions here? We have cattle and experience frequent droughts. Exelon will be using our river water in droughts.

We as landowners have had the land for generations in this area. This area of Victoria Co has remained remote as in centuries past without disturbing the wildlife habitat.

The educated engineers don't know everything about the shifting ground here in this part of the world as do the landowners in this site area.

Please do not allow a permit for a nuclear plant in the southern part of Victoria Co.
