Subject: IOEB Clearinghouse Screening Summary Tuesday, February 17, 2009

~~\*\*\*NOTE: THIS SUMMARY IS OFFICIAL USE ONLY - SENSITIVE INTERNAL INFORMATION. DO NOT FORWARD OUTSIDE OF NRC\*\*\*~~

Issues For Resolution (IFRs): None

OpE Forum Postings (COMMs): None

Management Requests: None

Follow-up/Other Tasks: Eight

*[Note - The information in this part of the Summary is often preliminary in nature and is provided to help IOEB staff communicate and track noteworthy items being followed up by either the Regions or HQ staff.]*

**1. Indian Point 2 - Underground Piping Leak in Aux Bldg Area ~20GPM, @ 1800pCi/l; possibly Hotwell Letdown to CST**

(From Region Morning Call) -- A 20 GPM (estimated) leak in the underground piping below the Aux building appears to be in the Hotwell letdown piping to the CST. The water contains 1800 pCi/l Tritium which is significantly below the required notification limits. EPA standard for drinking water is 20,000 pCi/l. The CST is still functional and the alternate supply city water is also functional. Continue to follow. Pass to Staff tracking liquid waste issues (Elaine Keegan & Steve Garry). Assigned to Thom Herry.
