SUPPLEMENTARY INFORMATION:

I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment a draft guide in the agency's "Regulatory Guide" series. This series was developed to describe and make available to the public such information as methods that are acceptable to the NRC staff for implementing specific parts of the NRC's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

The draft regulatory guide (DG), entitled, "Thermal Overload Protection for Electric Motors On Motor-Operated Valves," is temporarily identified by its task number, DG-1264, which should be mentioned in all related correspondence. DG-1264 is proposed Revision 2 of Regulatory Guide 1.106, dated March 1977.

This regulatory guide describes a method acceptable to NRC's staff for complying with the above criteria with regard to the application of thermal overload protection devices that are integral with the motor starter for electric motors on motor-operated valves. This method would ensure that the thermal overload protection devices will not needlessly prevent the motor from performing its safety-related function.

II. Further Information

The NRC staff is soliciting comments on DG-1264. Comments may be accompanied by relevant information or supporting data and should mention DG-1264 in the subject line. Comments submitted in writing or in electronic form will be made available to the public in their entirety through the NRC's Agencywide Documents Access and Management System (ADAMS).
