Wow. That's quite a difference from 20,000. Did your inspectors vet the number of gallons?

The latest estimate remains at 50-100 gallons of oil.

That's consistent with what Entergy reported back on Nov. 8: <http://www.nrc.gov/reading-rm/doc-collections/event-status/event/2010/20101109en.html>.

Thanks for the early release. I am interested in the 2 pm call. Can you get back to me when you get a moment - on the spilled oil from the transformer fire.

Greg,

The Indian Point Final Environmental Impact Statement will be available to the public as of 11 a.m. today. It's 643 pages. I can send you the whole document, if you like, or just the executive summary and introduction. It's your call.

Speaking of which, we were thinking about doing a conference call at 2 p.m. today with a few reporters who cover the plant. Would you be interested in that?
