Subject: Status of 2.206 petition

Mr. Harp

This e-mail addresses two issues: your January 22, 2011 e-mail concerning the Army's intent to modernize the Pohakaloa Training Area (PTA) and the status of your 2.206 petition.

Modernization of the PTA

Thank you for forwarding the Army's Federal Register Notice. NRC staff was not aware of the Army's intent to modernize the PTA, and we have asked the Army how these activities relate to the potential for depleted uranium (DU) being present on the PTA. The Army has informed NRC that the area being considered for modernization was not impacted by DU activities, and that these activities would not impact those areas that have been identified as containing DU. In the event the Army discovers DU in the area being considered for modernization, they will adjust the Radiation Control Area to include the area where the DU was located and notify the NRC.

Status of 2.206 Petition regarding Schofield Barracks and PTA

In October-November 2010, the NRC and U. S. Army met twice (October 29 and November 16) and the NRC issued two letters to the U.S. Army [November 24, 2010 (ML103160174) and

November 30, 2010 (ML103160239)] related to U.S. Army DU licensing activities. During the meetings, the U.S. Army provided information that was pertinent to the NRC investigation related to your 2.206 Petition. NRC staff is currently evaluating that information and the potential need for further clarification from the U.S. Army.

I will continue to keep you informed of our progress.
