Dear Susan,

I contacted AEA Technology concerning the drawing that we included in our application to the NRC for exempt distribution license. They told me that they would provide an equivalent drawing to me for inclusion in the application which removed some information that they said would be unnecessary for the application process but they considered to be of a sensitive nature. I should have this drawing by tomorrow and I will send it along to you via fax to substitute with the existing drawing in our application package.

No other drawings in our application to you are considered proprietary.

Met One is currently working to modify the sales brochure and the users manual as per our discussion over the telephone today. As soon as these changes are made, I'll send along to you the modified documents.

Best Wishes,

David Gobeli, Ph.D.
