Subject: RE: Wildlife Management Plan

Alan,

The Sage Grouse Implementation Team (SGIT) has issued a number of stipulations as you know. One of the stipulations prohibits disturbance during the breeding/brooding season. However, once construction activities are initiated outside the stipulated time period, activities are allowed to continue year round within the area of approved disturbance (wellfield patterns, roads, plant area, etc.). Exploration activities outside the pre-approved disturbance area cannot be performed during the stipulated time period. This has been approved generically by the SGIT and specifically for the Lost Creek Project by Wyoming Game and Fish.

As far as BLM, they are still completing their review of the Plan of Operations and in fact they are revising their RMP to consider Sage Grouse. Therefore, they have not approved of our plan yet. However, we have participated in BLMs public meetings and it appears to use that the new RMP will be very similar to the SGIT Plan.

John

Subject: Wildlife Management Plan

Good morning, John. There is a statement that you made when we had the teleconference call about sage grouse last week that concerns Amy Glovan, NRC's ecological contractor (from the CNWRA). The concern is that while LCI (UR-Energy) plans to adhere to sage-grouse timing stipulations during initial construction activities, once the first year (season) passes, site activities would continue regardless of the time of year. And, were we correct in hearing that the BLM approved of this plan? Is this something we could have in writing (electronic)?

Thank you.
