Subject: Change of Ownership

License No. 07-27897-01
Docket No. 030-29521
Control No. 574334

Ms. Robles,

Based on the letter from Cardiology Consultants and conversations with you on February 23, 2011, it is our understanding that change of ownership (control) is scheduled for the near future.

In order to complete the change of ownership by Monday, March 14, 2011, I will need the following additional information submitted to me by Monday, March 7, 2011:

1. a. Provide a complete description of the transaction (transfer of stocks or assets, or merger).
 - b. Indicate whether the name has changed and include the new name. Include the name and telephone number of a licensee contact who NRC may contact if more information is needed.
 - c. Describe any changes in personnel or duties that relate to the licensed program. Include training and experience for any new personnel.
 - d. Describe any changes in the organization, location, facilities, equipment or procedures that relate to the licensed program.
 - e. Describe the status of the surveillance program (surveys, wipe tests, quality control) at the present time and the expected status at the time that control is to be transferred.
 - f. Confirm that all records concerning the safe and effective decommissioning of the facility will be transferred to the transferee or to NRC, as appropriate. These records include documentation of surveys of ambient radiation levels and fixed and/or removable contamination, including methods and sensitivity.
 - g. Confirm that the transferee will abide by all constraints, conditions, requirements and commitments of the transferor or that the transferee will submit a complete description of the proposed licensed program.
2. Provide a detailed version of the Millville facility diagram, please indicate the position of each of the radioactive materials areas of use and describe the type, dimensions, and thickness of shielding that you will use. NUREG 1556, Volume 9, Revision 2 may be helpful in preparing your response and provides an example of a facility diagram that is acceptable to the NRC.
 - a. Preparation, use and storage of radiopharmaceuticals (refrigerated and non-refrigerated).

- b. Storage of radioactive waste, including decay-in-storage prior to disposal as nonradioactive waste. If this area is not located within your main department, describe how you will secure the material.

In addition, identify adjacent areas across the walls and above/below from use and storage locations and show that adequate steps have been taken to assure that radiation levels in unrestricted areas will not result in doses to individual members of the public in excess of those specified in 10 CFR 20.1301 (enclosed).

I will continue my review upon receipt of this information. Please reply to my attention at the Region I office and refer to Mail Control No. 574334. If you have any questions regarding this deficiency letter, please call me at 610-337-5272.
