Main Office Inspection Next Inspection Date: 2/2016 Field Office Inspection Temporary Job Site Inspection									
PROGRAM SCOPE									
The licensee is a small engineering firm that employs 11 individuals. The licensee possesses two Seaman Nuclear Corporation Models C-200 and C-300 moisture density gauges, for use daily/weekly during the construction season (May-November) for soils engineering projects. The licensee does not perform any service or maintenance activities on its gauges; these services are performed by the manufacturer. Currently, the licensee employs two authorized gauge users who have completed manufacturers training. Device is stored in a locked cage in the licensee's office at the 385 Midland, Highland Park location. Inspectors need to call before inspecting this site. (Not a safe location)									
Performance Observations									
At the time of this inspection, the gauges were not in use. The operator possessed required shipping papers which contained all appropriate information and were accessible in the transport vehicle. Gauges/cases are locked and chained to the rear of the vehicle during transport with two locks and two chains. The operator demonstrated an adequate level of understanding of emergency and handling procedures during job-site interviews. Security during transport was described with no problems noted.
