Subject: NRC Docket Nos. 52-029 and 52-030

Doug,

I wrote to you on 3 December, 2010, in which I emphasized the concerns I had raised during the DEIS hearings in Crystal River on 23 September, 2010.

In particular, I indicated the need for the community to be informed of expected accumulated Tritium penetration by pathways into groundwater and the Gulf waters.

My reason for writing now is that I note that Scott Flanders' letter to Mr Gregory Hogue of February 14, 2011, did not mention anything about tritium discharges into the Gulf of Mexico affecting the seagrass meadows there and any consequent impact upon the local protected manatee population which feed upon them in the summer months. Moreover, the Enclosure 1 - Crystal River Plant Manatee Protection Plan neither addresses the issue nor considers the increased effluent discharges from the Levy plant.

Would you please confirm that the issues raised at the DEIS meeting and in my letter have been scheduled for attention by the utility company and will be communicated for the information of the community exposed to hazard or otherwise affected in due course.

Thank you. Sincerely, Norman
