I am forwarding the letter from EPA we received and an article from inside EPA that EPA published on the GEIS since you were looking for it this morning.

I also talked to patty about which office should lead the commission briefing- it is now FSME lead but there is an action item from the Commission to include a discussion of the law of NEPA which I'm sure OGC will cover

I also wanted to check with you on EPA's request in the attached letter to receive draft copies of our UR EAs tiered from the GEIS. As you know, not all EAs go out for public comment. What is EPA's authority to receive draft copies? One could argue that they have jurisdiction regarding the aquifer exemption and the UIC permit even if those responsibilities are delegated to the state.
