Subject: Excursion

All,

Uranium One is reporting the confirmed excursion of monitor well 2MW89. This well is a perimeter monitor well in Mine unit 2 which is a restored well field. During routine quarterly sampling on March 8, 2011 2MW89 exceeded two Upper control limits (UCLs). On March 9, 2011 a second sample was taken again exceeding two (UCLs). Chloride 14.5 (ucl 13.6) and Alkalinity 137.8 (ucl 121.3) which confirmed the excursion. Corrective action will begin as soon as possible. Piping from mine unit 2 that was disassembled for winter to prevent freezing will have to be reassembled. A written report will be sent in the allotted time frame.

If you have any questions regarding this matter please call me at any time.

Larry

Thank You
