Gentlemen:

SUBJECT: NRC INSPECTION REPORT NOS. 50-438/87-07 AND 50-439/87-07

This refers to the Nuclear Regulatory Commission (NRC) special team inspection headed by H. W. Kerch, on November 2 thru 13, 1987. The inspection included a review of activities authorized for your Bellefonte facility. The inspection was performed utilizing the NRC Mobile Non-Destructive Examination (NDE) Van to perform nondestructive examination of selected safety related piping components and associated hangers/supports. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed inspection report.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress.

Within the scope of the inspection, no violations or deviations were identified.

Your attention is invited to Unresolved Items identified in the inspection report. These items involved quality of radiographs for smaller size piping (four inches and less), the calibration block for an ultrasonic test of a weld, and preservice inspection ultrasonic data. Regarding this last item, additional information, as specified in the inspection report details paragraph 6, is required for us to complete our evaluation. This information is requested within 120 days of receipt of this report. These matters will be pursued during future inspections.

In accordance with Section 2.790 of the NRC's "Rules of Practice," Part 2, Title 10, Code of Federal Regulations, a copy of this letter and its enclosures will be placed in the NRC Public Document Room.

The responses requested by this letter and its enclosure are not subject to the clearance procedures of the Office of Management and Budget as required by the Paperwork Reduction Act of 1980, Pub. L. No. 96-511.
