**RE: Sigma-Aldrich (Sigma) Fort Mims Site, Documents relating to NRC's Request  
for Additional Information, USNRC License # 24-16273-01**

Dear Ms Streit,

Accompanying this cover letter is a CD, which I've labeled, dated and signed. This CD contains a single PDF-formatted file (Sigma response to NRC RAIs 2011-02-25.doc). The contents of the CD represent Sigma's response to NRC's request for additional information.

Please let me know if you have any questions or concerns.

Best regards,

---

Thomas K Spencer  
Radiation Safety Officer

RECEIVED MAR 02 2010

**RE: Sigma-Aldrich (Sigma) Fort Mims Site Decommissioning, Request for Additional Information, USNRC License # 24-16273-01**

Dear Ms. Streit,

On 14 Jan 2011 the NRC and Sigma held a conference call, documented in your Telephone Conversation Record, dated 16 Jan 2011. In that conference, you listed some areas in which additional information is needed to complete your technical review. In a subsequent teleconference with Sigma and the NRC on 09 Feb 2011, you requested a summary of the GeoCheck Report used to determine depth to the water table. The following provides Sigma's responses to those requests.

**(1a) Provide written justification for "Industrial Worker" scenario as the compliance-based scenario to comply with 10 CFR 20.1402. Justification may include written statements or description of discussions with local land planners, including dates; meetings with local stakeholders; trending analysis of the land use for the region; zoning permit descriptions; and peak exposure time.**

Sigma response.

The Industrial Worker scenario is justified through analysis of 1) The City of Maryland Heights Land Use Map, 2) Official Zoning Map, and 3) email correspondence on 10 Aug 2010 with David Bookless, a planner with the city of Maryland Heights. These are documented in Attachments 1, 2 and 3, respectively.

The Land Use Map (Attachment 1), published 25 Jan 2011, shows the current land use of the Fort Mims property and surrounding area as Industrial/Commercial. The nearest residential use is nearly one mile away.

The current Zoning Map (Attachment 2), amended 04 Nov 2010, shows that the Fort Mims property is near the center a large area zoned as PD-M (Planned Development-Manufacturing) or M-1 (Office, Commercial and Light Manufacturing). The nearest residential zone is nearly one mile away.

In an email communication (Attachment 3) with David Bookless, a planner for the City of Maryland Heights, Mr. Bookless indicates that it is unlikely that the Fort Mims property would be re-zoned, because it is part of a larger Planned District (Lakeside Crossing).

Based on the findings that current and future use/zoning is predominately industrial/commercial, the Industrial Worker scenario is appropriate for use in dose modeling analysis.

**(1b) Provide identification of land uses that are less likely but plausible to bound the risk of the release for unrestricted use. Less likely but plausible land uses may include, but are not limited to, onsite residential use or excavation of soil for use in an off-site scenario.**

Sigma response.

Philotechnics, Ltd., under contract with Sigma, prepared a report titled “Additional RESRAD Modeling and Uncertainty Analyses”, dated 25 Jan 2011. This report is included as Attachment 4.

A “**Suburban Resident**” model was analyzed. Site-specific parameters were set to the same values as those used for the industrial worker model, which is the primary model used to demonstrate compliance with release criteria.

Using the Suburban Resident model, the instantaneous dose at time t=0 is 397 mrem/year (the time the radioactivity was first measured), which in this case was May 2009, nearly two years ago. This dose decreases to 46 mrem/year after the first year, and 0.5 mrem/year after three years. The decrease is due to migration and associated dilution of radioactivity in soil.

As in the original RESRAD model, the maximum concentration of <sup>14</sup>C and the maximum concentration of <sup>3</sup>H were assumed to be present throughout the entire contaminated zone, which is a very conservative assumption. For these reasons, the bounding dose of 397 mrem/year is demonstrably conservative.

A “**Resident Farmer**” scenario, in which excavated dirt is transported and ultimately utilized in farming, was analyzed by RESRAD. In this scenario, because the soils would be dug up, transported, and spread, the average concentrations of <sup>14</sup>C and <sup>3</sup>H were used. Area and thickness of the contaminated zone, as well as all other site soil parameters, are the same as in the original RESRAD model. The instantaneous dose at time t=0 is 114 mrem/year. After the first year, the dose decreases to 0.002 mrem/year.

**(1c) Once less likely but plausible scenarios have been identified, provide a quantitative analysis of or a qualitative argument discounting the need to analyze all scenarios generated from the reasonable foreseeable land uses. Time to peak dose may be used to discount onsite scenarios depending on the detail of justification used to demonstrate "Industrial Worker" as the onsite scenario provided in response to item 1 (a).**

Sigma Response.

As noted in the previous responses, a change in zoning at the Fort Mims location is very unlikely because of its siting within a much larger industrial/commercial area. Therefore, a

Resident Farmer scenario at the Fort Mims property is exceedingly unlikely, and can be discounted in the dose analysis.

The off-site Resident Farmer scenario discussed in section 1b is plausible, but unlikely. The scenario shows an instantaneous dose of 114 mrem/year at t=0, and 0.002 mrem/year after the first year. The dose drops off very rapidly during the first year. Even if the dirt was moved to a farming location, it is very unlikely that farming activities would progress rapidly enough to result in an exposure above 10 mrem/year. It is therefore reasonable to discount this scenario in the dose analysis.

The Suburban Resident modeling results in calculated doses of 397, 46 and 0.5 mrem/year after t=0, 1 and 3 years, respectively. At present time, we are nearly two years from t=0. This, taken with the extremely low probability of a Suburban Resident scenario in the next year, supports discounting the Suburban Resident scenario in the dose analysis.

**(2) Provide uncertainty analysis for site-specific parameters, including the distribution coefficient and hydraulic conductivity, to demonstrate that uncertainty in the model geological parameters will not result in a significant increase in exposure. If significant increase in exposure is found in the uncertainty ranges of these parameters, further justification may be required for site-specific information.**

Sigma Response.

Uncertainty analyses are also provided in the Philotechnics report (Attachment 4). The report documents additional uncertainty analyses on hydraulic conductivity (Ksat) and distribution coefficient (Kd). A total of FIVE analyses were run:

- Ksat of the Unsaturated Zone
- Kd for carbon in the Unsaturated Zone
- Kd for carbon in the Saturated Zone
- Kd for hydrogen in the Unsaturated Zone
- Kd for hydrogen in the Saturated Zone

None of the models indicated any appreciable difference in dose.

**(3) Provide a scaled map demonstrating the total area of the site and the total area sampled as compared to the site-specific model contaminated area of 12,000 m<sup>2</sup>**

Sigma Response

This information is provided in the Philotechnics report, Summary of Soil Sampling and Analysis (Attachment 5)

**(4) Since the dose assessment is associated with a request for release of the site for unrestricted use, provide the results of soil sample results in the form of a final status survey as described in your approved "Fort Mims Facility Soil Sampling and Analysis Plan," dated October 20, 2008.**

Sigma Response

This information is provided in the Philotechnics report, Summary of Soil Sampling and Analysis (Attachment 5)

**(5) Provide chemical analysis results, if any, from soil samples collected.**

Sigma Response

TestAmerica performed soil chemical testing, under contract with Sigma. The report is attached (Attachment 6). For the sampling point, we chose location #61 in survey unit FMF-29. The 14C soil concentration at location #61 at depths of 0.2, 1.0 and 2 meters was 483, 128 and 398 pCi/g, respectively. The sample for chemical analysis was a composite from surface to 6 ft (1.8 m). We believe that the depth and magnitude of 14C concentration, including its close proximity to the septic tank, was optimal for detecting chemical contamination, if any existed, on the survey site.

The sample was screened for 36 organic volatile compounds. Except for acetone, none were detected. Acetone was detected at an estimated concentration of 8.5 ug/kg, which was below the laboratory's reporting limit of 24 ug/kg.

**(6) Provide a summary of the GeoCheck report used to determine depth to the water table.**

Sigma Response

Cheryl Stipsits, EHS Director for Sigma-Aldrich Saint Louis, prepared a summary letter to NRC dated 15 Feb 2011. The letter, provided as Attachment 7, summarizes the water well data within a one-mile radius of the Fort Mims Site.

Please contact me if you have any questions or concerns regarding Sigma's responses to your request for additional information.

Sincerely,

---

Thomas K Spencer  
Radiation Safety Officer

David,

Thanks a lot. This helps. I realize no one can predict the future with absolute certainty but at least we know there are no definite changes pending.

Bill

Subject RE: Zoning Info

Bill,

The property is within a Planned District (Lakeside Crossing) with a site-specific ordinance governing the properties therein. While it is possible the property could be rezoned, it is unlikely as it is part of the larger district. That is not to say the district ordinance could not be amended to accommodate some change if deemed appropriate by the Planning Commission and City Council. If you have any further questions, please let me know.

David

**Subject:** Zoning Info

Hi David,

We have a property in Maryland Heights where we once conducted light manufacturing work. That work has ceased and we are decommissioning the site. We need to decide what to do with the site, e.g., renovate for new ops, sell, etc. I realize it is zoned commercial now but can you give us your best estimate as to whether it will remain so in the future (as opposed to re-zoning to residential or other)? The address is:

11542 Fort Mims Dr.  
Maryland Heights, MO

Thanks for any insight you can give.

Bill

## 1.0 Executive Summary

Philotechnics developed a RESRAD model to demonstrate the residual radioactivity in soils from licensed activities would not be likely to cause an average member of the critical group to receive a dose, from all sources, in excess of 25 mrem per year. An “industrial worker” occupancy scenario was used, consistent with current and expected land use of the site and surrounding properties. That model and report were sent to U.S. Nuclear Regulatory Commission, Region III (NRC), in December 2010.

During their review, NRC staff requested additional RESRAD modeling of plausible but unlikely occupancy scenarios. One suggested model was “suburban resident”; that model was run using the appropriate template in RESRAD with site specific parameters and maximum site radionuclide concentrations as used in the original submittal. The other model requested involved removing the soil from the fort Mims site and transferring it to farmland for use as topsoil; that was run using the “resident farmer” template, site specific parameters, and average soil concentrations at the Fort Mims site.

NRC Staff also requested additional uncertainty analyses to demonstrate the effect of soil characteristics—hydraulic conductivity ( $K_{sat}$ ) and distribution coefficient ( $K_d$ )—on the migration of radioactivity to the groundwater and subsequent contribution to radiation exposure due to ingestion of contaminated drinking water.

The suburban resident scenario will bound the dose at the absolute maximum, though highly unlikely. The bounding dose using this model is 397 mrem/year at time T=0 (the time the radioactivity was first measured), which in this case was May 2009, nearly two years ago. RESRAD calculates the dose at a time T=1 as 46 mrem/year with decreasing dose in subsequent years.

Uncertainty analyses indicate changes in  $K_{sat}$  or  $K_d$  would have little to no effect on the dose to a resident now or in the future.

## 2.0 Suburban Resident Scenario

RESRAD Suburban Resident template was used. Site-specific parameters were set to the same values as were used for the industrial worker model which is the primary model used to demonstrate compliance with release criteria.

Using the suburban resident model, the instantaneous dose at time T=0 is 397 mrem/year (the time the radioactivity was first measured), which in this case was May 2009, nearly two years ago; this decreases to 46 mrem/year after the first year and 0.5 mrem/year after three years. The decrease is due to migration and associated dilution of radioactivity in soil.

As in the original RESRAD model, the maximum concentration of  $^{14}\text{C}$  and the maximum concentration of  $^3\text{H}$  were assumed to be present throughout the entire contaminated zone, which is a very conservative assumption.

For these reasons, the bounding dose of 397 mrem is demonstrably conservative.

The suburban resident RESRAD report is included as Appendix A to this report.

### **3.0 The Resident Farmer Scenario**

At the request of NRC staff, we analyzed the potential dose after removal of the soils from the Fort Mims site for use as topsoil or fill over farmland. The “resident farmer” template was used. Because the soils will be dug up, transported, and spread; the average concentrations of  $^{14}\text{C}$  and  $^3\text{H}$  were used. Area and thickness of the contaminated zone, as well as all other site soil parameters, are the same as in the original RESRAD model. The instantaneous dose at time T=0 is 114 mrem/year. After the first year, the dose decreases to 0.002 mrem/year.

The resident farmer RESRAD report is included as Appendix B to this report.

### **4.0 Uncertainty Analyses**

NRC staff requested additional uncertainty analyses on hydraulic conductivity ( $K_{sat}$ ) and distribution coefficient ( $K_d$ ). A total of FIVE analyses were run:

- $K_{sat}$  of the Unsaturated Zone (Appendix C)
- $K_d$  for carbon in the Unsaturated Zone (Appendix D)
- $K_d$  for carbon in the Saturated Zone (Appendix E)
- $K_d$  for hydrogen in the Unsaturated Zone (Appendix F)
- $K_d$  for hydrogen in the Saturated Zone (Appendix G)

None of the models indicated any appreciable difference in dose.

Uncertainty analyses results are included as appendices to this report.

<b>Appendix B:</b> Survey Unit 29 Results	

## Executive Summary

Sigma Aldrich contracted Philotechnics to perform decontamination and decommissioning (D&D) of the Fort Mims facility with the ultimate goal of radioactive material license termination at that location. Previously-submitted reports and the information contained herein describe the decommissioning process, NRC's authorization of release and subsequent decommissioning of the building, and the suitability of the site to be released from licensing and other radiological controls.

Sampling of outdoor soil began in May 2009 after building demolition in accordance with the approved Fort Mims Facility Soil Sampling and Analysis Plan. The number of samples was increased nearly three-fold from the number calculated using MARSSIM guidance because of the difficulty in detecting  $^{14}\text{C}$  and  $^3\text{H}$  as volumetric contamination in soil renders scanning useless. For that reason, Visual Sampling Plan v 5.0 was used to determine number of samples and spacing.

Soil sampling was conducted in three phases:

- Phase 1 sampling was conducted in May 2009 and covered surface soils within the uppermost 15 cm (6 in) of soils in Survey Units 28 and 29.
- Phase 2 sampling was conducted in November 2009 and covered additional area outside the Survey Units as well as deeper depths.
  - Samples having a Sample ID number ending in 1 were collected at a discrete depth of 1 m beneath the surface.
  - Samples having a Sample ID number ending in 2 were collected at a discrete depth of 2 m beneath the surface.
- Phase 3 samples were collected from the building footprint in May 2010 after the building and slab were removed.
  - Samples having a Sample ID number ending in 0.02 were collected in the uppermost 15 cm of soil.
  - Samples having a Sample ID number ending in 1 were collected at a discrete depth of 1 m beneath the surface.
  - Samples having a Sample ID number ending in 2 were collected at a discrete depth of 2 m beneath the surface.

Results of soil sample analyses indicate the dose to a member of the public after license termination will be far below the release criterion of 25 mrem/year from residual radioactive materials that are distinguishable from background. Specific modeling information has been previously submitted to NRC.

Classification:	<input checked="" type="checkbox"/> Class 1 - Impacted <input type="checkbox"/> Class 2 - Impacted	<input type="checkbox"/> Class 3 - Impacted

**Applicable Nuclides of Concern:**

Nuclide	<input checked="" type="checkbox"/> <sup>3</sup> H	<input checked="" type="checkbox"/> <sup>14</sup> C							
Screening Values (pCi/g)	110	12							

**Applicable Survey Unit Surfaces:**

**% of Surface Requiring Scan Surveys**

<input checked="" type="checkbox"/> Soil Surface	<input type="checkbox"/> 20%	<input type="checkbox"/> 50%	<input checked="" type="checkbox"/> 100%	<input type="checkbox"/> N/A
--	------------------------------	------------------------------	--	------------------------------

Required Survey Instrumentation	Measurement Type	Static Count Time	Scan Rate	Based on:	Typical Static MDCR
<input checked="" type="checkbox"/> Ludlum 2350-1 w/ SPA-3	Gamma	NA	0.5 Meters/sec.	<sup>137</sup> Cs	N/A
<input type="checkbox"/> Other: _____ (Specify)					
<input checked="" type="checkbox"/> Soil samples collected will be sent to an off-site laboratory for analysis for all nuclides of concern.					

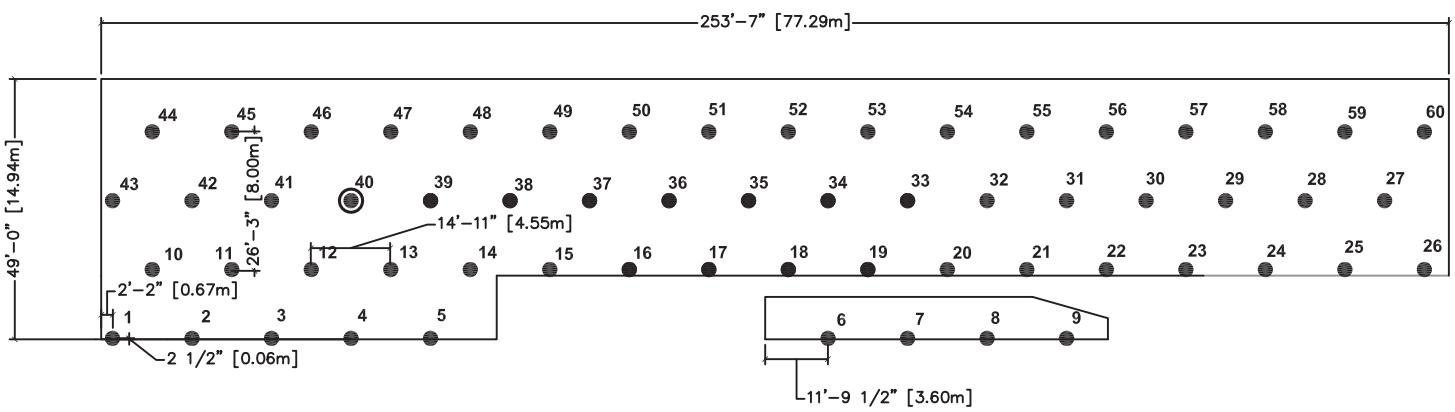

**General Survey Instructions:**

1. Survey maps have been attached that include the required soil sampling locations. Soil samples shall be collected at each location in accordance with these instructions and the Philotechnics Soil and Surface Sampling Procedure.
2. Perform the required scan surveys at the rate prescribed on the previous page. Document the performance of the scan survey in the comments section of the attached survey data sheets and survey maps.
3. The estimated number of sample locations needed for the statistical evaluation of this survey unit using the Wilcoxon Rank Sum test is **14**. However, since scan surveys are ineffective for the primary nuclides of concern, additional samples are integrated into the survey design using the Hahn-Meeker approach from Visual Sample Plan. The required number has been adjusted as needed to insure that a specific sized hot spot is not missed as discussed in the Survey and Analysis Plan. This survey has been designed in accordance with this approach.
4. For Class 1 and Class 2 survey units, the locations are determined by using a random start point and a systematic spacing from this point. Due to this method, the actual number of locations may vary. Collect the samples as presented on the attached survey maps.
5. Soil samples shall be collected at depths of 0-6". Collect enough soil from each depth to make one sample of at least 1000 grams and one sample of at least 500 grams.
7. Sampling tools and equipment shall be cleaned between each sample location in accordance with the Soil Sampling Procedure.

### Report of Analysis/Certificate of Conformance

06/12/2009

LIMS #: L38466  
Project ID# PH001-3EREGMA-06  
Received: 05/08/2009  
Delivery Date 06/07/2009  
P.O.#: PER RECEIPT  
Release #  
SDG#:

This is to certify that Teledyne Brown Engineering - Environmental Services located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples, as received by the laboratory, as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

  
Keith Jeter  
Operations Manager

### Flag Values

- U = Compound/Analyte not detected or less than 3 sigma
- + = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
- U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
- High = Activity concentration exceeds customer reporting value
- Spec = MDC exceeds customer technical specification
- L = Low recovery
- H = High recovery

**Bolded text indicates reportable value.**

No = Peak not identified in gamma spectrum  
 Yes = Peak identified in gamma spectrum  
 \*\*\*\* Results are reported on an as received basis unless otherwise noted

MDC - Minimum Detectable Concentration

#### Flag Values

U = Compound/Analyte not detected or less than 3 sigma

+ = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)

U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma

High = Activity concentration exceeds customer reporting value

Spec = MDC exceeds customer technical specification

L = Low recovery

H = High recovery

No = Peak not identified in gamma spectrum

Yes = Peak identified in gamma spectrum

\*\*\*\* Results are reported on an as received basis unless otherwise noted

MDC - Minimum Detectable Concentration

### Flag Values

- U = Compound/Analyte not detected or less than 3 sigma
- + = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
- U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
- High = Activity concentration exceeds customer reporting value
- Spec = MDC exceeds customer technical specification
- L = Low recovery
- H = High recovery

**Bolded text indicates reportable value.**

No = Peak not identified in gamma spectrum

Yes = Peak identified in gamma spectrum

\*\*\*\* Results are reported on an as received basis unless otherwise noted

## **Appendix B**

# **Survey Unit 29**

**Sigma Aldrich**  
**Fort Mims Facility D&D**  
**Final Status Survey Package**

Building: <u>FMF</u>	Survey Unit: <u>029</u>	Page <u>      </u> of <u>      </u>
Classification:	<input checked="" type="checkbox"/> Class 1 - Impacted <input type="checkbox"/> Class 2 - Impacted	<input type="checkbox"/> Class 3 - Impacted

**Applicable Nuclides of Concern:**

Nuclide	<input checked="" type="checkbox"/> <sup>3</sup> H	<input checked="" type="checkbox"/> <sup>14</sup> C							
Screening Values (pCi/g)	110	12							

**Applicable Survey Unit Surfaces:**

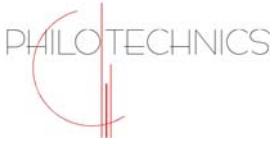

**% of Surface Requiring Scan Surveys**

<input checked="" type="checkbox"/> Soil Surface	<input type="checkbox"/> 20%	<input type="checkbox"/> 50%	<input checked="" type="checkbox"/> 100%	<input type="checkbox"/> N/A
--	------------------------------	------------------------------	--	------------------------------

Required Survey Instrumentation	Measurement Type	Static Count Time	Scan Rate	Based on:	Typical Static MDCR
<input checked="" type="checkbox"/> Ludlum 2350-1 w/ SPA-3	Gamma	NA	0.5 Meters/sec.	<sup>137</sup> Cs	N/A
<input type="checkbox"/> Other: _____ (Specify)					
<input checked="" type="checkbox"/> Soil samples collected will be sent to an off-site laboratory for analysis for all nuclides of concern.					

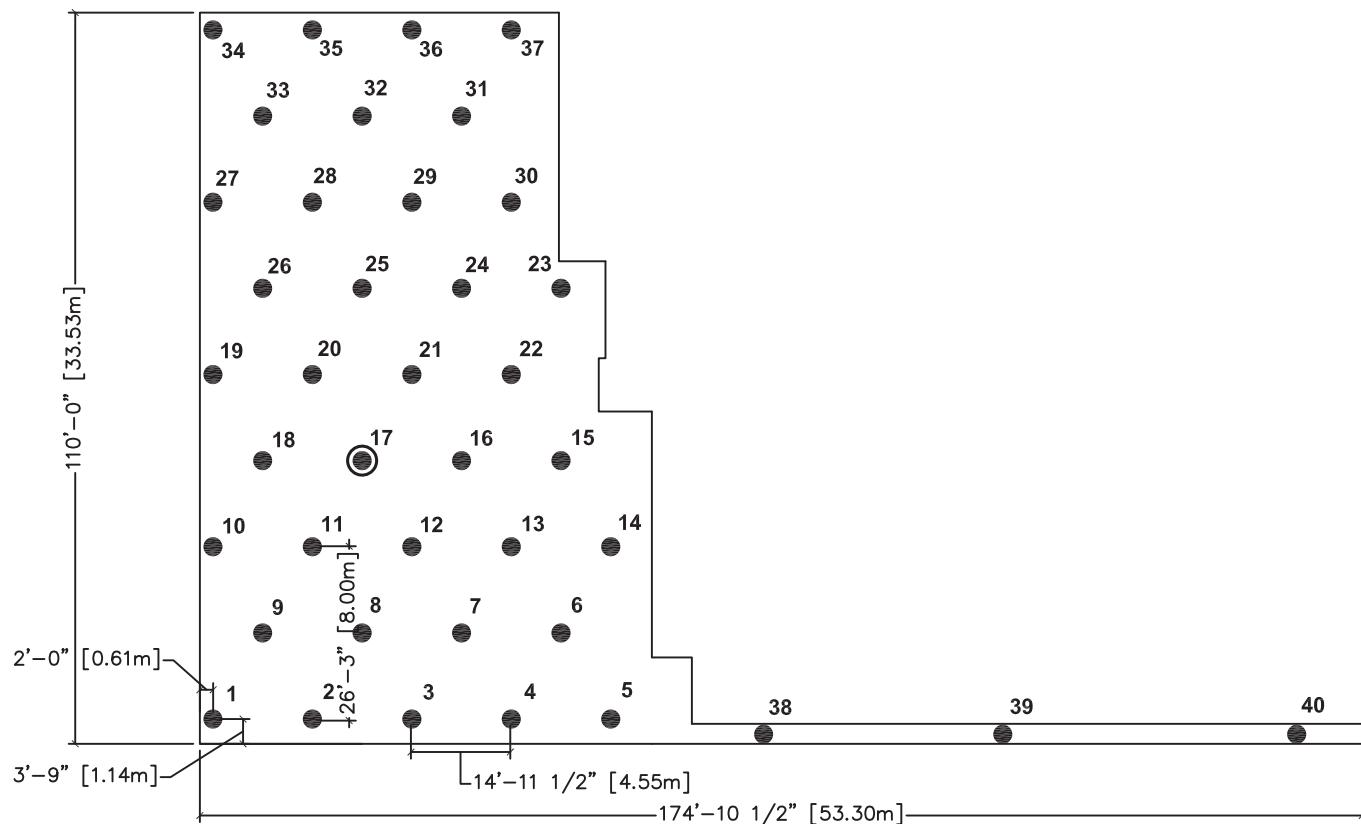

**General Survey Instructions:**

1. Survey maps have been attached that include the required soil sampling locations. Soil samples shall be collected at each location in accordance with these instructions and the Philotechnics Soil and Surface Sampling Procedure.
2. Perform the required scan surveys at the rate prescribed on the previous page. Document the performance of the scan survey in the comments section of the attached survey data sheets and survey maps.
3. The estimated number of sample locations needed for the statistical evaluation of this survey unit using the Wilcoxon Rank Sum test is **14**. However, since scan surveys are ineffective for the primary nuclides of concern, additional samples are integrated into the survey design using the Hahn-Meeker approach from Visual Sample Plan. The required number has been adjusted as needed to insure that a specific sized hot spot is not missed as discussed in the Survey and Analysis Plan. This survey has been designed in accordance with this approach.
4. For Class 1 and Class 2 survey units, the locations are determined by using a random start point and a systematic spacing from this point. Due to this method, the actual number of locations may vary. Collect the samples as presented on the attached survey maps.
5. Soil samples shall be collected at depths of 0-6". Collect enough soil from each depth to make one sample of at least 1000 grams and one sample of at least 500 grams.
7. Sampling tools and equipment shall be cleaned between each sample location in accordance with the Soil Sampling Procedure.

### **Report of Analysis/Certificate of Conformance**

06/12/2009

LIMS #: L38478  
Project ID#: PH001-3EREGMA-06  
Received: 05/08/2009  
Delivery Date 06/07/2009  
P.O.#: PER RECEIPT  
Release #  
SDG#:

This is to certify that Teledyne Brown Engineering - Environmental Services located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples, as received by the laboratory, as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

  
Keith Jeter  
Operations Manager

### Flag Values

- U = Compound/Analyte not detected or less than 3 sigma
- + = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
- U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
- High = Activity concentration exceeds customer reporting value
- Spec = MDC exceeds customer technical specification
- L = Low recovery
- H = High recovery

**Bolded text indicates reportable value.**

No = Peak not identified in gamma spectrum  
Yes = Peak identified in gamma spectrum  
\*\*\*\* Results are reported on an as received basis unless otherwise noted

MDC - Minimum Detectable Concentration

Flag Values

U = Compound/Analyte not detected or less than 3 sigma  
 + = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)  
 U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma  
 High = Activity concentration exceeds customer reporting value  
 Spec = MDC exceeds customer technical specification  
 L = Low recovery  
 H = High recovery

Bolded text indicates reportable value.

No = Peak not identified in gamma spectrum  
 Yes = Peak identified in gamma spectrum  
 \*\*\*\* Results are reported on an as received basis unless otherwise noted

MDC - Minimum Detectable Concentration

### **Report of Analysis/Certificate of Conformance**

12/22/2009

LIMS #: L40471  
Project ID#: PH001-3EREAGGM-06  
Received: 11/10/2009  
Delivery Date: 12/10/2009  
P.O.#: PO-0000881  
Release #:  
SDG#:

This is to certify that Teledyne Brown Engineering - Environmental Services located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples, as received by the laboratory, as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

  
Keith Jeter  
Operations Manager

### Flag Values

- U = Compound/Analyte not detected or less than 3 sigma
- + = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
- U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
- High = Activity concentration exceeds customer reporting value
- Spec = MDC exceeds customer technical specification
- L = Low recovery
- H = High recovery

**Bolded text indicates reportable value.**

No = Peak not identified in gamma spectrum

Yes = Peak identified in gamma spectrum

\*\*\*\* Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

MDC - Minimum Detectable Concentration

#### Flag Values

U = Compound/Analyte not detected or less than 3 sigma

+ = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)

U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma

High = Activity concentration exceeds customer reporting value

Spec = MDC exceeds customer technical specification

L = Low recovery

H = High recovery

No = Peak not identified in gamma spectrum

Yes = Peak identified in gamma spectrum

\*\*\*\* Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

MDC - Minimum Detectable Concentration

### **Report of Analysis/Certificate of Conformance**

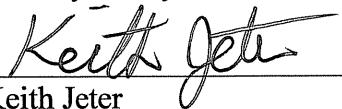

12/22/2009

LIMS #: L40441  
Project ID#: PH001-3EREGGM-06  
Received: 11/10/2009  
Delivery Date: 12/10/2009  
P.O.#: PO-0000881  
Release #:  
SDG#:

This is to certify that Teledyne Brown Engineering - Environmental Services located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples, as received by the laboratory, as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

  
Keith Jeter  
Operations Manager

#### Flag Values

- U = Compound/Analyte not detected or less than 3 sigma
- + = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
- U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
- High = Activity concentration exceeds customer reporting value
- Spec = MDC exceeds customer technical specification
- L = Low recovery
- H = High recovery

**Bolded text indicates reportable value.**

No = Peak not identified in gamma spectrum

Yes = Peak identified in gamma spectrum

\*\*\*\* Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

MDC - Minimum Detectable Concentration

Criteria	Yes	No	NA	Comment
1 Shipping container custody seals present and intact.			NA	
2 Sample container custody seals present and intact.			NA	
3 Sample containers received in good condition			Y	
4 Chain of custody received with samples			Y	
5 All samples listed on chain of custody received			Y	
6 Sample container labels present and legible.			Y	
7 Information on container labels correspond with chain of custody			N	
	FMF-29-46-1			Time on sample says 16:38 but the COC says 16:36
8 Sample(s) properly preserved and in appropriate container(s)			NA	
9 Other (Describe)			NA	

Use COC per Matt Norton 11/21/09 2pc/g moe

Typical Spacing = 29' 10" or 9.10 m

- ✖ Previous Sampling Location
- New Location – Sample at the Surface, 1 and 2 meter depths
- New Location – Sludge Sample
- New Location – Liquid Sample
- New Location – Judgmental Sample

### **Report of Analysis/Certificate of Conformance**

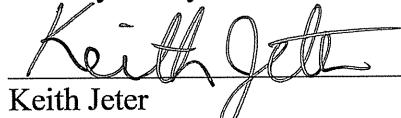

06/17/2010

LIMS #: L42355  
Project ID#: PH001-3EREGMA-10  
Received: 05/26/2010  
Delivery Date: 06/16/2010  
P.O.#: PO-0000881  
Release #:  
SDG#:

This is to certify that Teledyne Brown Engineering - Environmental Services located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples, as received by the laboratory, as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

  
Keith Jeter  
Operations Manager

H-3	2003	<		<b>2.23E+00</b>	pCi/g		2.06	g wet		06/16/10	10	M	U

### Flag Values

- U = Compound/Analyte not detected or less than 3 sigma
- + = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
- U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
- High = Activity concentration exceeds customer reporting value
- Spec = MDC exceeds customer technical specification
- L = Low recovery
- H = High recovery

**Bolded text indicates reportable value.**

No = Peak not identified in gamma spectrum

Yes = Peak identified in gamma spectrum

\*\*\*\* Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

MDC - Minimum Detectable Concentration

### Report of Analysis/Certificate of Conformance

06/17/2010

LIMS #: L42361  
 Project ID#: PH001-3EREGMA-10  
 Received: 05/26/2010  
 Delivery Date: 06/16/2010  
 P.O.#: PO-0000881  
 Release #:  
 SDG#:

This is to certify that Teledyne Brown Engineering - Environmental Services located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples, as received by the laboratory, as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

  
 Keith Jeter  
 Operations Manager

#### Flag Values

- U = Compound/Analyte not detected or less than 3 sigma
- + = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
- U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
- High = Activity concentration exceeds customer reporting value
- Spec = MDC exceeds customer technical specification
- L = Low recovery
- H = High recovery

**Bolded text indicates reportable value.**

No = Peak not identified in gamma spectrum

Yes = Peak identified in gamma spectrum

\*\*\*\* Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

### Report of Analysis/Certificate of Conformance

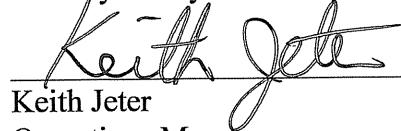

06/17/2010

LIMS #: L42362  
 Project ID#: PH001-3EREGMA-10  
 Received: 05/26/2010  
 Delivery Date: 06/16/2010  
 P.O.#: PO-0000881  
 Release #:  
 SDG#:

This is to certify that Teledyne Brown Engineering - Environmental Services located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples, as received by the laboratory, as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

  
 Keith Jeter  
 Operations Manager

Flag Values

- U = Compound/Analyte not detected or less than 3 sigma
- + = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
- U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
- High = Activity concentration exceeds customer reporting value
- Spec = MDC exceeds customer technical specification
- L = Low recovery
- H = High recovery

**Bolded text indicates reportable value.**

No = Peak not identified in gamma spectrum

Yes = Peak identified in gamma spectrum

\*\*\*\* Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

### Report of Analysis/Certificate of Conformance

06/04/2010

LIMS #: L42358  
Project ID#: PH001-3EREGMA-10  
Received: 05/26/2010  
Delivery Date: 06/02/2010  
P.O.#: PO-0000881  
Release #:  
SDG#:

This is to certify that Teledyne Brown Engineering - Environmental Services located at 2508 Quality Lane, Knoxville, Tennessee, 37931, has analyzed, tested and documented samples, as received by the laboratory, as specified in the applicable purchase order.

This also certifies that requirements of applicable codes, standards and specifications have been fully met and that any quality assurance documentation which verified conformance to the purchase order is on file and may be examined upon request.

I hereby certify that the above statements are true and correct.

  
Keith Jeter  
Operations Manager

## Case Narrative

06/04/2010 12:03

**L42358**

**PH001-3EREGMA-10**

Philotechnics

The duplicate RPD for these samples was 54.8. QC limits are 50. The sample was analyzed wet. The samples were difficult to homogenize wet, which led to the discrepancy between the sample and it's duplicate.

### Flag Values

- U = Compound/Analyte not detected or less than 3 sigma
- + = Activity concentration exceeds MDC and 3 sigma; peak identified(gamma only)
- U\* = Compound/Analyte not detected. Peak not identified, but forced activity concentration exceeds MDC and 3 sigma
- High = Activity concentration exceeds customer reporting value
- Spec = MDC exceeds customer technical specification
- L = Low recovery
- H = High recovery

**Bolded text indicates reportable value.**

No = Peak not identified in gamma spectrum

Yes = Peak identified in gamma spectrum

\*\*\*\* Unless otherwise noted, the analytical results reported are related only to the samples tested in the condition they are received by the laboratory.

MDC - Minimum Detectable Concentration

Case Narrative  
LOT NUMBER: F0I030547

This report contains the analytical results for the sample received under chain of custody by TestAmerica St. Louis on September 3, 2010. This sample is associated with your Schreiber, Yonley & Associates project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted below.

The test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica St. Louis. Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium, unless requested wet weight by the client.

**Observations/Nonconformances**

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

**Volatiles Method: 8260B**

Batch 0252251

The Acetone and 1,1,2,2-tetrachloroethane LCS recoveries are outside the upper QC limit, indicating a potential positive bias for the analyte. The analyte 1,1,2,2-tetrachloroethane was a non-detect and the results will be reported from this run. The sample was re-prepared and re-analyzed within holding time for acetone and the sample result was less than the reporting limit but the LCS/LCSD recoveries still recovered high. Since the sample result was less than the reporting limit the sample data is reported.

**Affected Sample:**

F0I030547 (1): RADCHEM 1

**METHODS SUMMARY**

FOI030547

<u>PARAMETER</u>	<u>ANALYTICAL METHOD</u>	<u>PREPARATION METHOD</u>
Percent Moisture	MCAWW 160.3 MOD	MCAWW 160.3 MOD
Volatile Organics by GC/MS	SW846 8260B	SW846 5030B

**NOTE(S) :**

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

## MEMORANDUM

SIGMA-ALDRICH MFG LLC

ENVIRONMENTAL, SAFETY & HEALTH

---

**TO:** Nuclear Regulatory Commission  
**FROM:** Cheryl Stipsits, Sigma-Aldrich St. Louis EHS Director  
**SUBJECT:** Supplementary Information to EDR Report  
**DATE:** February 15, 2011

---

Within the RESRAD model using site-specific parameters, 40 meters (120 feet) was used as the estimated depth to groundwater. In order to obtain this value, Sigma-Aldrich ran a query of registered groundwater wells within a 1-mile radius of the 11542 Fort Mims Drive location through Environmental Data Resources (EDR). The EDR GeoCheck® Report provides water well data, as compiled from the US Geological Society (USGS) database, the FRDS Public Water Supply System information, and Missouri State Database Well information. The query of all information sources provided a total of 11 water wells within the 1-mile radius.

The data showed that while a couple of the wells indicated the presence of water at depths as shallow as 30-60 feet (10-20 meters) below ground surface (bgs), sustainable aquifers for potable water were not detected until 140-200 feet (47-67 meters) bgs, minimally. This site is located within an industrial/commercial setting where drinking water is provided via a public water supply, and the potential for a local receptor to obtain drinking water from a shallow well is highly unlikely. Thus, the value used within the RESRAD model (potable groundwater at 40 meters bgs) is a conservative assumption for the purpose of risk modeling based on the site-specific data.
