General Comment

I beseech you to not extend the life of STNP Reactors 1 & 2.

For public safety and environmental reasons, the continuation of this cannot be justified.

Aging plants that are at risk of failures or explosions should not be kept active.

As we have seen in Japan, being able to keep the reactors cool is essential for public safety and the integrity of the process. We have limited access to fresh water that can be used for this facility - the priority should be for drinking water, livestock and farming.

I understand that the main cooling reservoir is leaking out the bottom. How and when will this be repaired?

At the most fundamental level we cannot justify generating more radioactive waste when there is no adequate solution for dealing with it.

We have safer and cleaner ways to generate the same power - THAT is where our money and attention need to be directed.

Respectfully,
 Brandi Clark Burton
